CABLE MANAGEMENT SOLUTIONS

A PART OF

# CABLE TRAY SYSTEMS

## COPE® CABLE TRAY SOLUTIONS FOR YOUR INFRASTRUCTURE REQUIREMENTS

Welcome to our new products catalog. This complete catalog is designed for ease of use and to provide the basic information needed to select the proper cable tray system for your needs.

The first section of the catalog provides comprehensive product information, definitions, and technical data needed to select the proper tray. The second section provides industry standards and guidelines for the manufacture and installation of cable tray.

Cope's Swaged Ladder tray uses our patented swaging system of rung attachment. This system of attachment provides a very rigid tray without welding that is easy to handle and install. The flange out design provides the maximum access to your cables, even in narrow or divided cable trays.

Cope's Hat Rung tray provides a flange in alternative for those instances where space is critical. With the flanges turned inward, this tray can be fitted into confined spaces. Slotted rungs provide excellent cable tie down capability.

Cope Trof provides the ultimate in cable support for your small diameter, flexible cable. With 1" ribs located every 2" on center, drooping of cable is virtually eliminated.

Cope's I-BEAM tray provides a heavy duty welded cable tray for clients requiring I-BEAM side rails. It is perfect for long span locations, heavy loads, and will interface with existing "I" Beam configuration trays.

Cope Channel provides an excellent support system for those applications where only a few cables are needed. It can also be used for separation of services in ladder or trof trays.

Cope wire basket provides the superior flexibility and ease of installation required by data-com installations. The exclusive Kwik-Latch system speeds cable tray installation.

Cope Glas™ fiberglass cable tray provides the answer to many adverse environments. Life cycle costs, long span capability and easy field modification make Cope Glas an ideal choice for industrial, chemical, and petrochemical facilities.

Our customer service team is available to assist with questions about application, installation, and availability of our products.

Thank you for considering Cope for your cable tray requirements.

## COPE, previously known as T.J. Cope

Thomas Jefferson Cope founded T.J. Cope in Philadelphia, Pennsylvania in 1887. At that time, T.J. Cope's primary business was designing and manufacturing cable installation/pulling equipment for overhead and underground applications.

In 1948, T.J. Cope introduced the first modular Cable Tray System. The tray system was fabricated from sheet metal with the edges turned up forming a trof shape. This type of installation offered a more flexible and economical alternative to the traditional use of conduit.

In 1957, T.J. Cope was purchased by the Rome Cable Corporation, which in turn, was purchased by Alcoa in 1959. The Cyprus Mines Corporation purchased T. J. Cope six years later when the U. S. Justice Department forced Alcoa to divest its holdings of the Rome Cable Company.

T.J. Cope was merged into Allied Tube & Conduit Corporation in 2005. The Cope brand is owned by Allied Tube & Conduit Corporation and is part of the Electrical and Support Division. Allied Tube & Conduit Corporation is a world leading manufacturer of galvanized steel tubing, including electrical conduit; its affiliate, AFC Cable Systems, provides AC/MC cable and flexible conduits; and its other affiliate, Unistrut International Corporation, provides Power-Strut and Unistrut metal framing systems. Allied Tube & Conduit Corporation, a part of Atkore International, serves the electrical, mechanical, and construction markets worldwide.

### Headquarters:

## PRODUCT FEATURES

### OVERVIEW

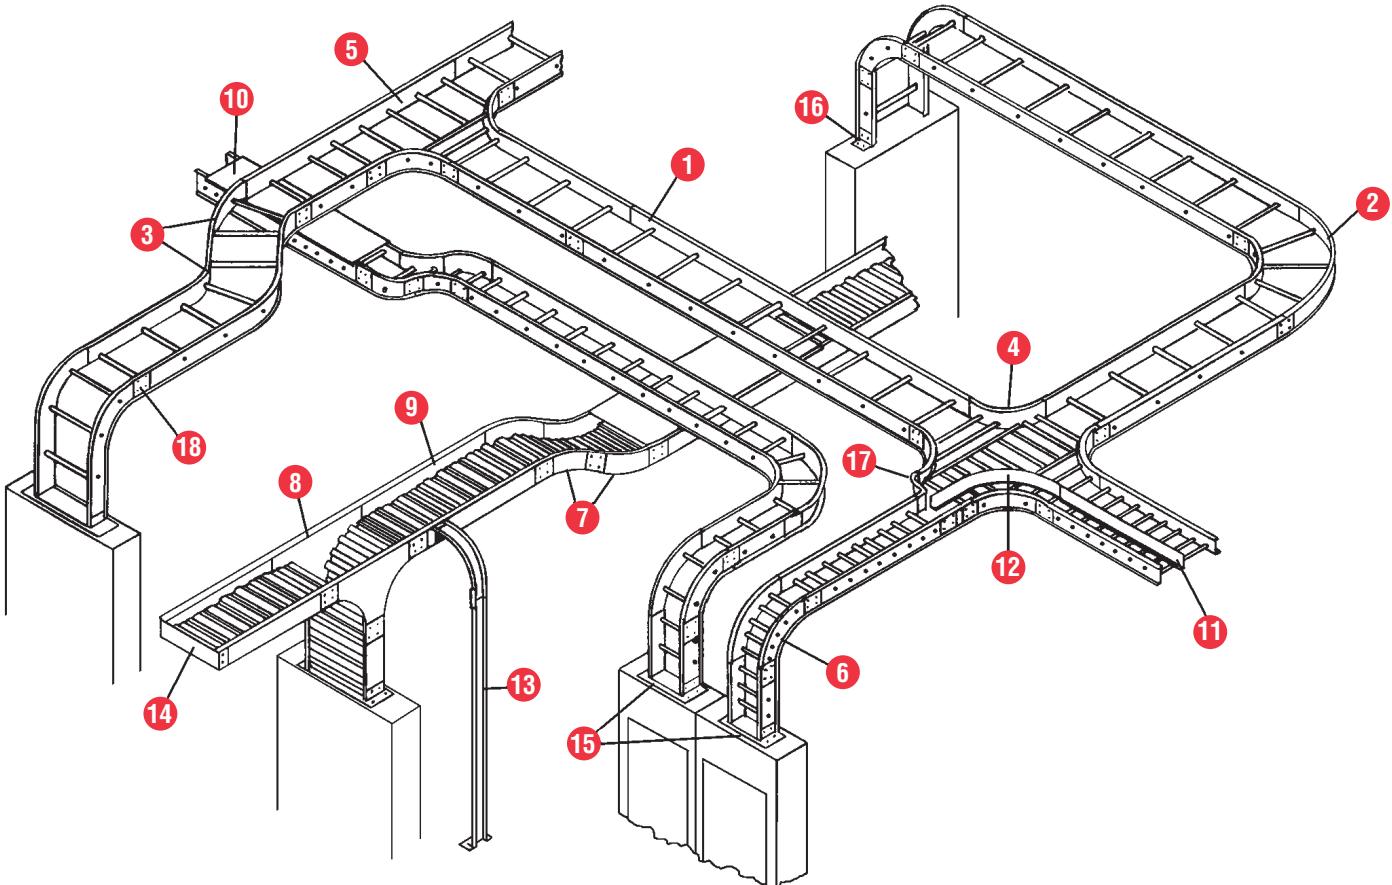

#### SELECTING A COPE® CABLE TRAY SYSTEM

A number of factors must be considered when selecting the proper cable tray system and planning the installation:

- Material and Finish
- Types of Cable Tray
- NEMA Class
- Cavity Size - Load/Depth/Width of Tray
- Length of Straight Sections
- Rung Spacing
- Radius of Fittings
- Cable Tray Support Locations
- Electrical Grounding

#### CABLE TRAY SYSTEM DRAWING LEGEND

- 1 Straight Section, Ladder (SL)
- 2 Horizontal Elbow, 90°, Ladder Type (9F)
- 3 Horizontal Elbow, 30° (3F), 45° (4F) or 60° (6F)
- 4 Horizontal Cross, Ladder Type (FC)
- 5 Horizontal Tee, Ladder Type (FT)
- 6 Vertical Elbow, Outside, 90° (9O)
- 7 Vertical Elbow, Outside & Inside, 30° (3O, 3I), 45° (4O, 4I), or 60° (6O, 6I)
- 8 Vertical Tee, Solid Bottom Trof Type (VT)
- 9 Straight Section, Solid Bottom Trof (SL)
- 10 Flanged Solid Cover (FS)
- 11 Barrier Strip-Straight Section (SB)
- 12 Barrier Strip-Flexible-Horizontal Fitting (FB)
- 13 Straight Section, Channel (SL)
- 14 Blind End (BE)
- 15 Box Connector (BC)
- 16 Angle Connector (CA)
- 17 Reducing Connector (CO)
- 18 Universal Curvilinear Connector (RC)

#### TYPES OF CABLE TRAY

Any assembly of cable tray straight sections, fittings and accessories that form a rigid system to support cables is a cable tray. The different types of tray designs are described below.

##### **Ladder**

A prefabricated metal structure consisting of two side rails connected by individual transverse members or rungs. Ladder tray is the most common and the most economical type of tray. It also provides maximum ventilation for cabling.

##### **I-Beam**

Cope I-Beam cable tray system provides long span capability and versatility. Cope I-Beam interfaces with existing "I" Beam configurations.

##### **Ventilated Trof**

A prefabricated metal structure with clear openings no greater than 4".

Trof cable trays are the best choice for smaller cables. Ventilated trofs offer some air-flow while completely eliminating cable sagging.

##### **Solid Trof**

A prefabricated metal structure consisting of a bottom with no openings within the cable bearing surface. Solid bottom cable trays completely eliminate cable sagging and offer the most protection for the cables.

##### **Channel**

A prefabricated metal structure consisting of a one-piece ventilated or solid bottom channel section not exceeding 6" in width.

##### **Cope-Glas™**

Fiberglass cable tray provides the answer to many adverse environments. Life cycle costs, long span capability and easy field modification make Cope Glas™ an ideal choice for industrial, chemical, and petro-chemical facilities.

##### **Wire Basket**

Provides the superior flexibility and ease of installation required by data-com installations. The exclusive Kwik- Latch™ system speeds cable tray installation.

#### MATERIALS AND FINISH

The material selection is based on the environmental conditions and economic considerations for the project.

##### **Steel - Pre-Galvanized**

Hot Dip Mill-Galvanized steel (ASTM-A-653-G90 CS) is zinc coated by a hot dip process. Steel strip from a coil is fed through a continuous zinc coater which cleans, fluxes and coats the steel with molten zinc. After cooling, the steel is recoiled. The pre-galvanized coating provides a total weight of 0.90 oz. of zinc for both sides of one square foot of material.

Mill galvanized ladder is made of pre-galvanized steel and generally used indoors or in locations not exposed to the elements or corrosives.

##### **Steel - Hot Dip Galvanized After Fabrication**

In hot dip galvanizing after fabrication (HDGAF), the finished part is immersed in a bath of molten zinc (ASTM 123). This method results in complete zinc coverage and a thicker coating than pregalvanized or electro-plated steel.

The zinc coating is typically 2.6 MIL or 1.5 oz./sq. ft. of surface area.

This is the coating of choice for applications where protection from severe corrosion is a design factor.

##### **Stainless Steel**

Type 304 and Type 316 stainless steel material in accordance with ASTM-A-240.

##### **Aluminum**

Aluminum material in accordance with AA-6063-T6. Aluminum trays are suitable for most outdoor applications and offer reductions in total installed costs.

##### **Fiberglass**

For extremely corrosive areas, Cope offers the most complete line of Fiberglass cable trays available. For a complete Cope "Cope-Glas™" catalog, please contact the factory or the Cope representative in your area.

##### **Special Finishes**

For extremely corrosive areas Cope can supply a PVC (polyvinyl chloride) coating over aluminum or uncoated steel. This is applied using the fluidized bed process to a nominal thickness of 12 mils.

Weathering steel is also available; contact factory for availability.

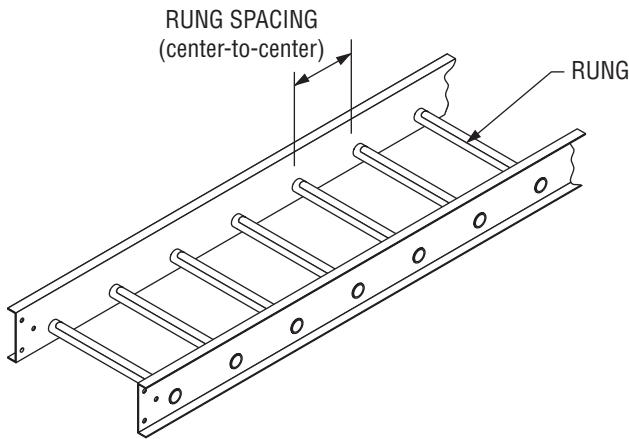

# PRODUCT FEATURES

## PRODUCT FEATURES

### OVERVIEW

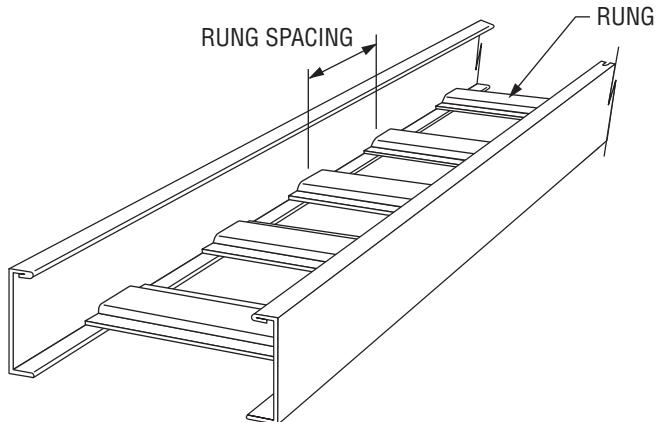

#### SWAGE LADDER

Is a structure consisting of two side rails, connected by individual rungs and is manufactured in accordance with NEMA Standard VE-1. Cope rungs are fastened to the side members by an exclusive swaging process. This assembly method insures a superior mechanical and electrical connection.

#### HAT

Is a prefabricated metal structure consisting of reinforced hat-shaped rungs, arc-welded to the side rails, and is manufactured to NEMA Standard VE-1. Cope Hat rungs are fastened to the side rails with an automatic, self-indexing MIG-arc-welding system, plug welding a  $\frac{1}{2}$ " diameter zone. The superior strength of the Cope plug weld withstands the rigors of shipping, handling, erection, and cable support service.

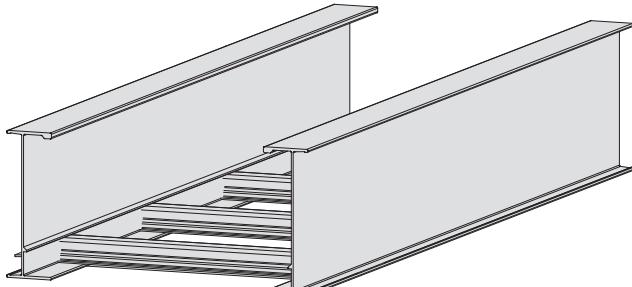

#### I-BEAM

Cope I-Beam cable tray system provides long span capability and versatility. Cope I-Beam interfaces with existing "I" Beam configurations.

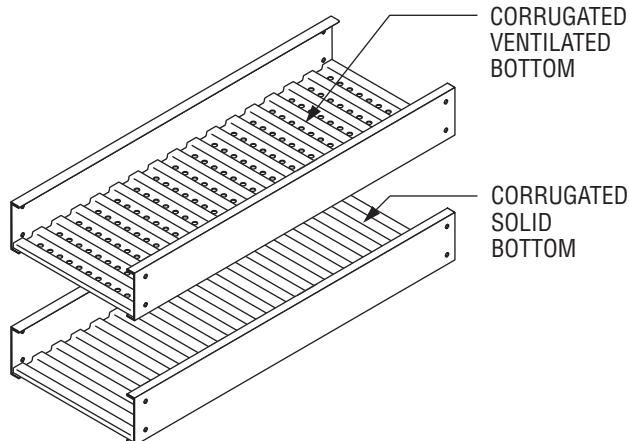

Cope Offers a complete system of I-Beam products and accessories to meet all your project requirements.

In the following pages you'll find the products, accessories, specifications, and technical data for the Cope I-Beam cable tray system.

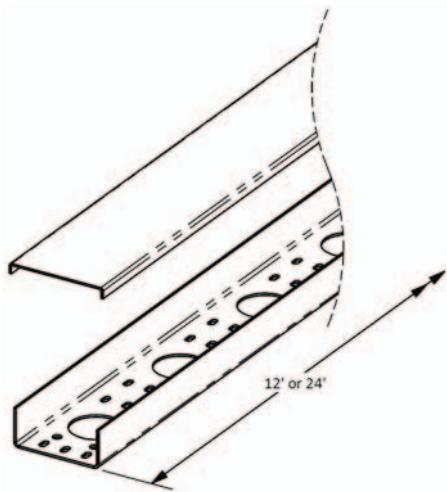

#### TROF

Is a prefabricated metal structure consisting of ventilated or solid bottoms, welded to the side rails, and are manufactured and tested to NEMA Standard VE-1. Straight sections, fittings (elbow, tees, crosses, reducers, etc.), and a full line of matching and interfacing accessories are available. Corrugations give great lateral rigidity to the bottom transmitting the load to the side rails. Lateral (transverse) deflection is nearly eliminated compared to rung type trofs where the rails are not continuously braced by the bottom. Cope Corrugated bottoms do NOT limit the tray load capacity.

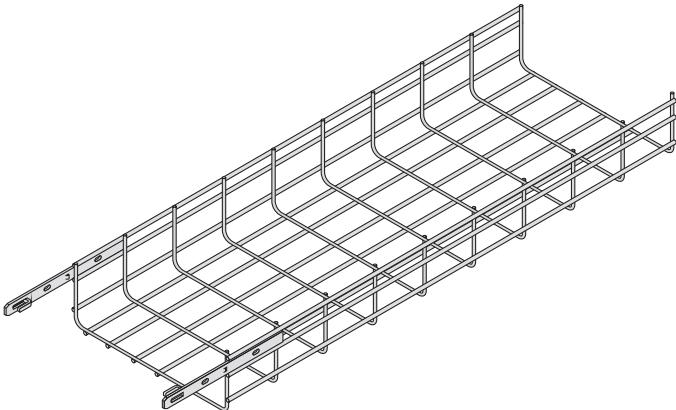

#### CHANNEL

Cope Channel supports single branches of power or multiconductor control cable or instrument tubing. Ideal for communication, fire alarm, or call station and clock cabling. A complete line of devices are available for interfacing with Cope Ladders and Cope Trofs.

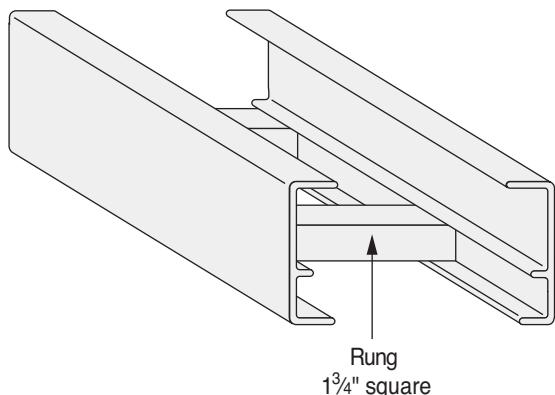

#### WIRE BASKET

Wire basket tray is a welded wire mesh cable management system produced from high strength steel wires. Wire basket tray is produced by first welding a net, forming the channel, and then finishing after fabrication. The 2" x 4" mesh permits continuous airflow to help prevent heat buildup. In addition this unique open design prevents the buildup of dust, contaminants, and bacterial proliferation.

#### COPE-GLAS™

Engineers, designers, contractors, installers and end users have many reasons to choose COPE-GLAS cable tray for their power, signal, and control distribution support requirements. COPE-GLAS cable tray systems are available in a variety of sizes and styles. A standard or special design can be fabricated for any indoor or outdoor application regardless of size.

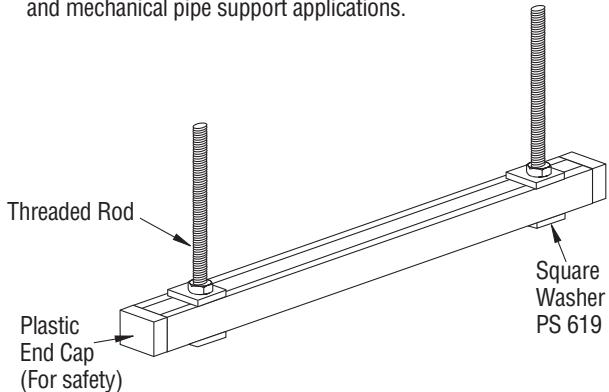

# PRODUCT FEATURES

## ASSOCIATED PRODUCTS

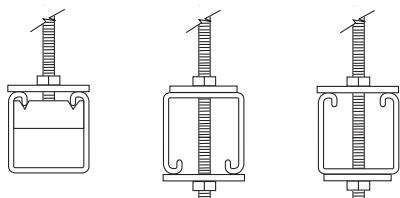

### POWER-STRUT® METAL FRAMING SYSTEM

#### Trapeze Support System

Power-Strut metal framing is ideal for electrical and mechanical pipe support applications.

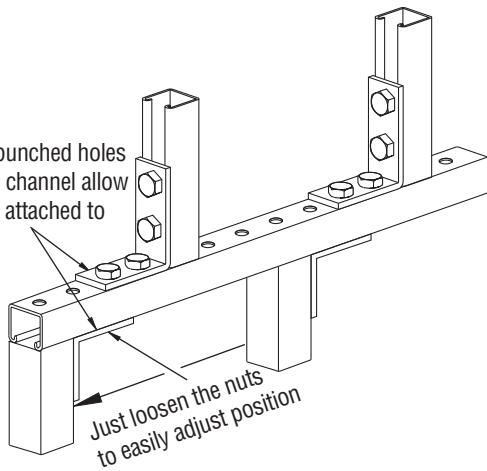

#### Acceptable Methods to Hang Channels

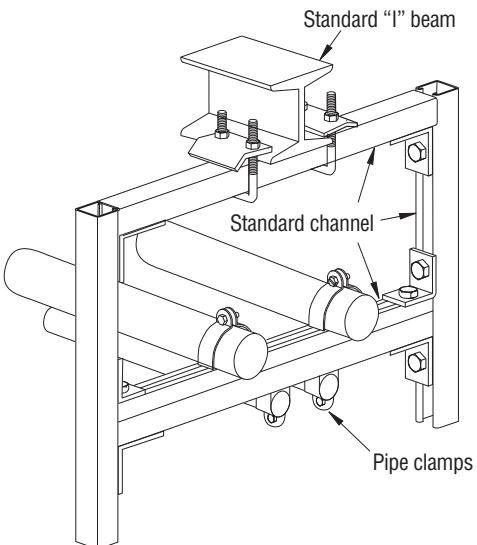

Pre-slotted channel allow through channel connections

#### Standard Channel and Fitting Assembly

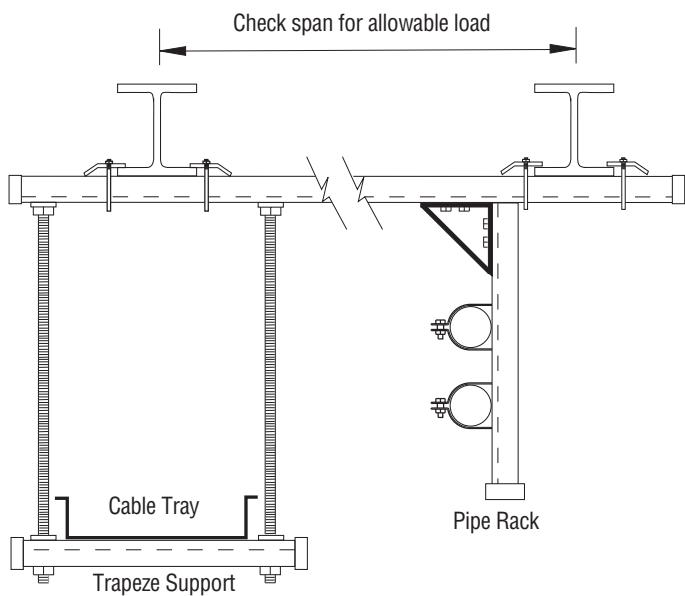

The factory punched holes in "H" series channel allow fittings to be attached to either side.

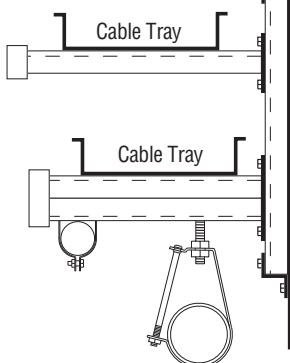

#### Ganged Pipe Support

#### Overhead Multi-Use Support Systems Using Channel Attached to "I" Beams

Stock brackets are available in lengths from 6" to 36"

#### 1.2 DEFINITIONS

**Metallic Cable Tray System** – An assembly of cable tray straight sections, fittings, and accessories that forms a rigid structural system to support cables.

**Ladder Cable Tray** – A prefabricated metal structure consisting of two longitudinal side rails connected by individual transverse members.

**Trof Cable Tray** – A prefabricated metal structure consisting of a ventilated bottom pan or rungs\* within integral or separate longitudinal side rails.

\*The cable tray bottom will have openings sufficient for the passage of air and utilize 75 percent or less of the plan area of the surface to support cables. The maximum distance between cable support surfaces shall not exceed 100 mm (4") in the direction parallel to the cable tray side rails.

**Solid Bottom Cable Tray** – A prefabricated metal structure consisting of a bottom with no openings within integral or separate longitudinal side rails.

**Straight Section** – A length of cable tray which has no change in direction or size.

**Cable Tray Fitting** – A device which is used to change the direction or size of a cable tray system.

**Cable Tray Connector (Splice Plate)** – A device which joins cable tray straight sections and fittings, or both.

The basic types of connectors (splice plates) are:

Rigid  
Expansion  
Adjustable  
Reducer

**Fasteners** – Screws, nuts, bolts, washers, rivets, pins, and other items used to assemble a cable tray system.

**Horizontal Elbow (Horizontal Bend)** – A cable tray fitting which changes the direction in the same plane. Standard degrees of bend are 90°, 60°, 45°, and 30°.

**Horizontal Tee** – A cable tray fitting which is suitable for joining cable trays in three directions at 90° intervals in the same plane.

**Horizontal Cross** – A cable tray fitting which is suitable for joining cable trays in four directions at 90° intervals in the same plane.

**Vertical Elbow (Vertical Bend)** – A cable tray fitting which changes direction to a different plane. Standard degrees of bend are 90°, 60°, 45°, and 30°. An inside vertical elbow changes direction upward from the horizontal plane.

An outside vertical elbow changes direction downward from the horizontal plane.

**Vertical Tee** – A cable tray fitting which is suitable for joining cable trays in three different directions at 90° intervals in different planes.

**Reducer (Straight, Right Hand, Left Hand)** – A cable tray fitting which is suitable for joining cable trays of different widths in the same plane.

A straight reducer has two symmetrical offset sides.

A right-hand reducer, when viewed from the large end, has a straight side on the right.

A left-hand reducer, when viewed from the large end, has a straight side on the left.

**Channel Cable Tray** – A prefabricated metal structure formed from one piece of metal and having either a ventilated bottom or solid-bottom. The channel shall not exceed 152 mm (6") in width.

**Accessories** – Devices which are used to supplement the function or plane of straight sections and fittings, and include such items as adjustable splices (horizontal and vertical), dropouts, covers, conduit adapters, hold-down devices and dividers.

**Cable Tray Support** - A device which provides adequate means for supporting cable tray sections and fittings.

The basic types of cable tray supports are:

- Cantilever bracket
- Trapeze
- Single rod suspension.

**Cable Tray Support Span** - The distance between the center lines of supports.

## SECTION 2 – MANUFACTURING STANDARDS

### 2.1 MATERIALS

Cable tray systems shall be made of either corrosion-resistant metal or metal with a corrosion-resistant finish. Aluminum and stainless steel alloys are inherently corrosion-resistant and no finish coating is required in most environments.

### 2.2 FINISHES

**2.2.1** Carbon steel used for cable trays shall be protected against corrosion by one of the following processes:

A. Hot-dip mill galvanized in accordance with ASTM Publication No. A653.\*

\*Coating designation G90 of ASTM 653 has an average zinc coating weight of 1.25 oz. per square foot (0.381 kg/m<sup>2</sup>) of steel total coating on both surfaces (1.06 mils or 0.027mm) average thickness per side).

Hot-dip mill galvanized coatings are produced by continuous rolling steel sheets or strips in coils through a bath of molten zinc. The process involves pre-treating the steel to make the surface react readily with molten zinc as the strip moves through the bath at high speeds. During fabrication where slitting, forming, cutting, or welding is performed, the cut edges and heat-affected zone of welding are subject to superficial oxidation. These areas are then protected through electrolytic action of the adjacent zinc surfaces. The coating is smooth, ductile, and adherent.

B. Hot-dip galvanized after fabrication in accordance with ASTM Publication No. A123. Grade 65. It is important to specify ASTM A653 or ASTM A123 to insure the specific coating is furnished.

Grade 65 of ASTM A123 has an average zinc coating weight of 1.50 oz. per square foot (0.46 kg/m<sup>2</sup>) (2.55 mils or 0.064mm) average thickness per side).

Fabricated products which are hot-dip galvanized are thoroughly cleaned, fluxed, and immersed into a bath of molten zinc where they react to form a

metallurgical bonded zinc coating. Normal oxidation of the galvanized surfaces will, in a short period of time, appear as a dull gray or white coating. Some degree of roughness and variations of thickness can be expected due to the hot dipping process. Because the galvanizing process takes place at the low end of the stress-relieving temperature range, some stress relief occurs and some distortion or warping may result.

C. Other equivalent commercially available coatings.

**2.2.2** Steel nuts and bolts shall be protected against corrosion by one of the following processes:

- A. ASTM Publication No. B633
- B. ASTM Publication No. B766
- C. Other equivalent commercially available coatings.

**2.2.3** Where metallic cable tray is intended for installation in highly corrosive environments, including most alkaline and acidic conditions, further protection against corrosion shall be provided by one of the following processes:

A. PVC (Polyvinylchloride) – A PVC coating shall be applied in a fluidized bed or by electrostatic spray. The coating thickness shall be 15 mils (0.381mm) ± 5 mils (±0.127mm).

Items to be protected shall be thoroughly cleaned, primed, and then coated with a fine grain UV (ultraviolet) stabilized vinyl plastic powder.

All field cuts and damaged areas of coated tray shall be repaired with a compatible PVC compound to ensure a coating integrity.

A PVC coating is generally applied to bare steel cable tray but can also be applied in aluminum cable tray. PVC is not recommended as a coating on galvanized steel cable trays because of rough surfaces and gas emissions which cause voids and adhesion problems.

B. Other equivalent commercially available coatings.

### 2.3 DIMENSIONS

#### 2.3.1 General

Plus or minus values stated reflect the range of nominal dimensions in cable tray designs and are not intended to represent manufacturing tolerances.

#### 2.3.2 Ladder Trays

**1. Lengths of Straight Sections** – NEMA - 12' (3,660mm) ± $\frac{3}{16}$ " (4.76mm) and 24' (7,320mm) ± $\frac{5}{16}$ " (7.94mm), not including connectors if attached. CSA - 10' (3000mm) ± $\frac{3}{16}$ " (4.76mm) and 20' (6,000mm) ± $\frac{5}{16}$ " (7.94mm), not including connectors if attached.

# NEMA CABLE TRAY STANDARDS

## NEMA STANDARDS

**2. Widths** - 6", 9", 12", 18", 24", 30", and 36" (152mm, 225mm, 305mm, 457mm, 610mm, 762mm and 914mm),  $\pm\frac{1}{16}$ " (6.35mm) inside dimension. Overall widths shall not exceed inside widths by more than 4" (102mm).

**3. Depths** - Inside depths shall be 3", 4", 5", and 6" (76.2mm, 102mm, 127.0mm, and 152mm),  $\pm\frac{1}{16}$ " (9.53mm). Outside depths shall not exceed inside depths by more than 1 $\frac{1}{4}$ " (31.7mm).

**4. Rung Spacing on Straight Sections** - 6", 9", 12", or 18" (152mm, 229mm, 305mm, or 457mm) on centers.

**5. Radii** - 12", 24", and 36" (305mm, 610mm, and 914mm).

**6. Degree of Arc for Elbows** - 30°, 45°, 60°, and 90°.

### 2.3.3 Trof Trays

**1. Lengths of Straight Sections** - NEMA - 12' (3660mm)  $\pm\frac{1}{16}$ " (4.76mm) and 24' (7320mm)  $\pm\frac{1}{16}$ " (7.94mm), not including connectors if attached. CSA - 10' (3000mm)  $\pm\frac{1}{16}$ " (4.76mm) and 20' (6,000mm)  $\pm\frac{1}{16}$ " (7.94mm), not including connectors if attached.

**2. Widths** - 6", 9", 12", 18", 24", 30", and 36" (152mm, 225mm, 305mm, 457mm, 610mm, 762mm and 914mm),  $\pm\frac{1}{16}$ " (6.35mm), inside dimension. Overall widths shall not exceed inside widths by more than 4" (102mm).

**3. Depths** - Inside depths shall be 3", 4", 5", and 6" (76.2mm, 102mm, 127mm, and 152mm),  $\pm\frac{1}{16}$ " (9.53mm). Outside depths shall not exceed inside depths by more than 1 $\frac{1}{4}$ " (31.7mm).

**4. Radii** - 12", 24", and 36" (305mm, 610mm, and 914mm).

**5. Degrees of Arc for Elbows** - 30°, 45°, 60°, and 90°.

**6. Transverse Elements** - The maximum open spacing between transverse elements shall be 4" (102mm) measured in a direction parallel to the tray side rails.

### 2.3.4 Solid-Bottom Trays

**1. Lengths of Straight Sections NEMA** - 12' (3660mm)  $\pm\frac{1}{16}$ " (4.76mm) and 24' (7320mm)  $\pm\frac{1}{16}$ " (7.94mm), not including connectors if attached. CSA - 10' (3000mm)  $\pm\frac{1}{16}$ " (4.76mm) and 20' (6,000mm)  $\pm\frac{1}{16}$ " (7.94mm), not including connectors if attached.

**2. Widths** - 6, 9, 12, 18, 24, 30, and 36" (152mm, 225mm, 305mm, 457mm, 610mm, 762mm and 914mm)  $\pm\frac{1}{16}$ " (6.35mm), inside dimension. Overall widths shall not exceed inside widths by more than 4" (102mm).

**3. Depths** - inside depths shall be 3", 4", 5", and 6" (76.2mm, 102mm, 127mm, and 152mm),  $\pm\frac{1}{16}$ " (9.53mm). Outside depths shall not exceed inside depths by more than 1 $\frac{1}{4}$ " (31.7mm).

**4. Radii** - 12", 24", and 36" (305mm, 610mm, and 914mm).

**5. Degree of Arc for Elbows** - 30°, 45°, 60°, and 90°.

**6. Bottom** - Bottom is solid.

### 2.3.5 Channel Trays

**1. Lengths of Straight Sections** - 12' (3660mm)  $\pm\frac{1}{16}$ " (4.76mm) and 24' (7320mm)  $\pm\frac{1}{16}$ " (7.94mm), not including connectors if attached.

**2. Widths** - 3", 4", and 6" (76.2mm, 102mm, and 152mm),  $\pm\frac{1}{16}$ " (6.35mm), inside dimension.

**3. Depths** - 1 $\frac{1}{4}$ " to 1 $\frac{1}{2}$ " (31.7mm to 44.4mm) outside dimensions.

**4. Radii** - 12", 24", and 36" (305mm, 610mm, and 914mm).

**5. Degree of Arc for Elbows** - 30°, 45°, 60°, and 90°.

### 2.4 PROTECTION OF CABLE INSULATION

The inside of cable tray systems shall not have sharp edges, burrs, or projections which can damage cable insulation.

### 2.5 FITTINGS

The design and construction of fittings shall be based on the assumption that they will be supported in accordance with the recommendations given in 6.6 for support locations.

### 2.6 MARKING OF TRAYS WHEN USED AS EQUIPMENT GROUNDING CONDUCTORS

When steel or aluminum cable tray systems are used as equipment grounding conductors, cable tray sections and fittings shall be marked to show the minimum cross-sectional area in accordance with the Article 392 of the National Electrical Code®.

## SECTION 3 - PERFORMANCE STANDARDS & LOAD/SPAN CLASS DESIGNATIONS

### 3.1 WORKING (ALLOWABLE) LOAD CAPACITY

The working (allowable) load capacity represents the ability of a cable tray to support the static weight of cables. It is equivalent to the destruction load capacity, as determined by testing in accordance with 4.1 divided by a safety factor of 1.5.

### 3.2 LOAD/SPAN CLASS DESIGNATIONS

There shall be three working load categories of cable tray:<sup>\*</sup>

50 lbs/linear ft. (74.4 kg/m) (Symbol A)

75 lbs/linear ft. (111.6 kg/m) (Symbol B)

100 lbs./linear ft. (148.8 kg/m) (Symbol C) and,

four support span categories of:

8' (2.44m), 12' (3.66m), 16' (4.87m), 20' (6.09m)

Utilizing these above, load/span class designations are presented in the table below:

#### LOAD/SPAN CLASS DESIGNATIONS

Working Lbs./Ft	Load (kg/m)	Support Feet	Span (m)	NEMA Class
50	(74.4)	8	(2.44)	8A
75	(116.6)	8	(2.44)	8B
100	(148.8)	8	(2.44)	8C
50	(74.4)	12	(3.66)	12A
75	(116.6)	12	(3.66)	12B
100	(148.8)	12	(3.66)	12C
50	(74.4)	16	(4.87)	16A
75	(116.6)	16	(4.87)	16B
100	(148.8)	16	(4.87)	16C
50	(74.4)	20	(6.09)	20A
75	(116.6)	20	(6.09)	20B
100	(148.8)	20	(6.09)	20C

**NOTE 1** - The above working loads are for cable only; when considering applications requiring concentrated static load, see 6.2.

**NOTE 2** - These designations do not apply to channel tray, and the manufacturer should be consulted.

**NOTE 3** - For deflection see 6.1.

#### SECTION 4 - TEST STANDARDS

##### 4.1 DESTRUCTION LOAD TEST

###### 4.1.1 Test Specimen

For each design of cable tray, two separate tests shall be made. An un-spliced straight section of the widest width shall be used in each test.

For ladder type cable trays rung spacing shall be 12" on center.

Differences in gauge, height of side rails, rung or bottom to side rail connection, or the configuration of any part constitute a different design.

###### 4.1.2 Type and Length of Span

Test spans shall be simple beam spans with free unrestrained ends. Trays shall not have side restraints. Span lengths shall be as specified  $\pm 1\frac{1}{2}$ " (38 mm).

###### 4.1.3 Orientation of Specimens

Specimens shall be tested in a horizontal position. The total length of the test specimen shall be not more than the specified span length plus 20%. Any overhang shall be equal.

###### 4.1.4 Supports

Each end of the specimen shall be supported by an  $1\frac{1}{8}$ " (30 mm) wide by  $\frac{3}{4}$ " (19 mm) high steel bar(s) with a 120° "V" notch cut in its bottom to a depth of  $\frac{3}{16}$ " (5 mm). The "V" notch shall rest on a 1" (25 mm) solid round steel bar which is securely fastened to a rigid base, or the

specimen shall be supported directly on a  $2\frac{1}{2}$ " (65 mm) maximum diameter round steel bar or heavy wall steel tube fastened to rigid base.

###### 4.1.5 Loading Material

Loading material shall be steel strips, lead ingots, or other loading material.

Steel strips shall have rounded or de-burred edges, a maximum thickness of  $\frac{1}{8}$ " (3 mm), a width of 4" (100 mm), and a maximum length of 24' (7320 mm).

Five lead ingots, each weighing approximately 5 pounds (2.3 kg), shall be interconnected across corners into a string of 5 ingots approximately 22" (550 mm) long. Individual ingots are normally hexagonal, approximately 3" (75 mm) in diameter, and  $1\frac{1}{2}$ " (38 mm) deep.

Other loading material shall have a maximum weight of 10 pounds (4.5 kg), a maximum width of 5" (125 mm), and a maximum length of 12" (300 mm).

###### 4.1.6 Loading

All specimens shall be loaded to destruction. The load shall be applied in at least 10 increments which are approximately equal.

Loading shall be uniformly distributed for the length and breadth of the specimen except that the loading material shall be not closer than  $\frac{1}{2}$ " (13 mm) nor further than 1" (25 mm) from the innermost elements of the side rails. It shall be arranged across the tray with a minimum of  $\frac{3}{8}$ " (10 mm) between stacks so that the loading material does not bridge transversely. All loading material shall be placed between the supports without overhanging.

For loading weight in a ladder-type tray, it shall be permissible to cover the bottom of the tray between supports with a flat sheet of No. 9 gauge (3.8 mm) flattened expanded material not more than 3' (900 mm) long and with a wire hole size of  $\frac{3}{4}$ " (19 mm), or a flat sheet of No. 16 gauge (1.5 mm) sheet steel not more than 3' (900 mm) long. The expanded metal or sheet steel shall not be fastened to the tray and shall be no closer than  $\frac{1}{2}$ " (13 mm) to the side rails. The 3' (900 mm) lengths shall not overlap by more than 2" (50 mm). The weight of the expanded metal or sheet steel shall be added to the total weight of the loading material.

###### 4.1.7 Destruction Load Capacity

The total weight of the loading material on the cable tray at the time it is destroyed less the last incremental weight added shall be considered to be the destruction load capacity of the cable tray. The Rated Load Capacity shall be the Destruction Load Capacity divided by a safety factor of 1.5.

# NEMA CABLE TRAY STANDARDS

## NEMA STANDARDS

### 4.1.8 Interpolation & Extrapolation of Test Data

When allowable load and deflection data are determined by load tests, values for span lengths not tested shall be determined by interpolation from a curve based on values for a minimum of the two (2) span lengths. Extrapolation for shorter span lengths is permissible using the formula below, however extrapolation shall not be used for span lengths longer than the longest span length tested.

Where:  $W_2 = (W_1 \times L_{12}) / L_{22}$

$W_1$  = Tested Load, lbs/ft (kg/m)

$W_2$  = Load on Shorter Span, lbs/ft (kg/m)

$L_1$  = Tested Span Length, ft (m)

$L_2$  = Shorter Span Length, ft (m)

### 4.2 RESIDUAL DEFLECTION TEST

Determine the Minimum Test Load (MTL) from the formula:

Where:  $MTL = 1.5 * L * W$

1.5 = Safety Factor

$L$  = Span Length, ft (m)

$W$  = Rated Load at Span Length, lbs/ft (kg/m)

A minimum of two (2) tray specimens shall be tested. The following procedure shall be used for each tray.

1. Load tray to 10% of MTL. Measure the vertical deflection of the tray at two (2) points along the line midway between the supports and at right angles to the longitudinal axis of the tray. The two points shall be at the midpoint of the span and under of each side rail. The two readings shall be considered to be the initial deflection of the tray.

2. Continue loading until the Rated Load ( $W$ ) has been applied. Measure the deflection at the same points as for the initial deflection measurement above.

3. Continue loading until the Minimum Test Load (MTL) has been applied. Remove the all load from the tray and wait 15 minutes before measuring the deflection at the previous two points. This final measurement is known as the residual deflection of the tray specimen.

Average the residual deflections of the two (2) test specimens. This shall be considered the final result. However, if the residual deflection for either specimen is  $> 80\%$  of the initial deflection, and in addition, deviates from the average by more than 10%, then two more specimens shall be tested. The average of the three highest values at the point of measurement of the four specimens shall be considered the final result.

### 4.3 ELECTRICAL CONTINUITY OF CONNECTIONS

#### 4.3.1 Test Specimen

Each specimen shall consist of two 24" (600 mm) lengths of side rail connected by the manufacturer's standard splice.

### 4.3.2 Resistance Test Procedure

Each specimen should be joined together, using the mechanical connector, and following the instructions provided by the manufacturer.

A current of 30 amperes DC shall be passed through the specimen and the resistance measured between two points  $\frac{1}{16}$ " (1.6 mm) from each side of the splice. The net resistance of the joint shall be not more than 0.00033 ohm as computed from the measured voltage drop and the current passing through the specimen. The ambient temperature of the specimen shall be between 60° and 90°F (15° to 35°C). The current shall be applied to the specimen at least 12" (300 mm) from the splice joint.

## SECTION 5 - SPECIFICATIONS & DRAWINGS

### 5.1 DATA TO APPEAR IN SPECIFICATIONS

The following statement and minimum data, when applicable, should appear in all cable tray specifications:

Cable tray shall be manufactured and installed in accordance with NEMA Standard VE 1-2002

Load / Support Span Class Designation (see Table 1)

Type (see Section 1.2 Definitions)

Material (see Section 2.1)

Finish (see Section 2.2)

Tray Length (see Section 2.3)

Width (see Section 2.3)

Inside Depth (see Section 2.3)

Rung Spacing (see Section 2.3)

Fitting Radius (see Section 2.3).

### 5.2 DATA TO APPEAR ON DRAWINGS

The following minimum data should appear on all cable tray drawings:

Type (ladder, trof, etc.)

Width(s)

Load depth

Straight section, fitting, or accessory

Fitting radii

Elevation (bottom of tray)

Vertical and horizontal changes in direction

Clearances-vertical and horizontal

Number of trays (if there is a stack of trays)

Support span

Show graphic scale

## SECTION 6 - APPLICATION INFORMATION

### 6.1 DEFLECTION

Under normal applications deflection limitations should not be included in design criteria for cable trays. However, if unusual or special conditions exist, the manufacturer should be consulted. Limitations of deflection for

aesthetic purpose only can result in an over-designed tray system.

## 6.2 CONCENTRATED STATIC LOAD

*(If Required by User)*

A concentrated static load is not included in the Load/Span Designations NEMA VE-1, Table 1. Some user applications may require that a given concentrated static load be imposed over and above the working load.

Such a concentrated static load represents a static weight applied between the side rails at midspan. When so specified, the concentrated static load may be converted to an equivalent, uniform load ( $We$ ) in pounds per linear foot (kilograms per meter) using the formula: (see NEMA VE-2, Section 4.8.2)

$$We = 2 \times (\text{Concentrated Static Load}) \\ \text{span length, ft. (m)}$$

The value for  $We$  will be added to the static weight of cables in the tray. This combined load may be used to select the appropriate load/span designation NEMA VE-1, Table 1. If the combined load exceeds the working load shown in the load/span designation table, the manufacturer should be consulted.

## 6.3 WARNING! WALKWAYS

Inasmuch as cable tray is designed as a support for power or control cables, or both, and is not intended or designed to be a walkway for personnel, the user is urged to display appropriate warnings cautioning against the use of this support as a walkway. The following language is suggested:

*Warning! Not to be used as a walkway, ladder or support for personnel. To be used only as a mechanical support for cables and tubing.*

## 6.4 FITTINGS

Changes in direction should be mechanically continuous and accomplished by use of fittings having dimensions in accordance with 2.5.

## 6.5 SUPPORTS

Supports for cable trays should provide strength and working load capacity sufficient to meet the load requirement of the cable tray systems.

Horizontal and vertical tray supports should provide an adequate bearing surface for the tray and should have provisions for hold down clamps or fasteners.

In addition, vertical tray supports should provide secured means for fastening cable trays to supports.

## 6.6 SUPPORT LOCATIONS

**For complete information on cable tray support, please refer to NEMA Standard VE-2-2006.**

### 6.6.1 Horizontal Cable Tray Straight Sections

Horizontal cable tray straight sections should be supported at intervals not to exceed the support span for the appropriate NEMA Class Designation shown in NEMA VE-1, Table

1. Un-spliced straight sections should be used on all simple spans and on end spans of continuous span runs. A support should be located within 2' (610mm) of each side of an expansion connector. Straight section lengths should be equal to or greater than the span length to ensure not more than one splice between supports.

### 6.6.2 Horizontal Cable Tray Fittings

1. Horizontal Elbow Supports for horizontal tray fittings should be placed within 2' (600 mm) of each fitting extremity, and as follows: (See page 22, Figure 6-1 for a graphic presentation of fitting supports.)

- (a) 90° supports at the 45° point of arc.
- (b) 60° supports at the 30° point of arc.
- (c) 45° supports at the 22½° point of arc (except for the 12" (300 mm) radii).
- (d) 30° supports at the 15° point of arc (except for the 12" (300 mm) radii).

2. Horizontal Tee Supports shall be placed within 2' (600 mm) of each of the three openings connected to other cable tray items for 12" (300 mm) radius fittings. On all other radii, at least one support should be placed under each side rail of the horizontal tee, preferably as shown in Figure 6-2, page 22.

3. Horizontal Cross Supports shall be placed within 2' (600 mm) of each of the four openings connected to other cable tray items for 12" (300 mm) radius fittings. On all other radii, at least one support should be placed under each side rail of the horizontal cross, preferably as shown in Figure 6-3, page 22.

4. Horizontal Wye Supports shall be placed within 2' of each of the three openings connected to other cable tray items, and at 22½° point of the arc adjacent to the branch as shown in Figure 6-4, page 22.

5. Reducer Supports shall be placed within 2' (600 mm) of each fitting extremity as shown in Figure 6-5 and 6-6, page 22.

6. Vertical Cable Tray Elbows should be supported at the top of runs at each end of the fitting. Vertical cable tray elbows at the bottom of runs should be supported at the top of the elbow and within 2' (600 mm) of the lower extremity of the elbow as shown in Figure 6-7, page 22.

7. Vertical Cable Tray Tees should be supported within 2' (600 mm) of each fitting extremity as shown in Figure 6-8, page 22.

# PRODUCT FEATURES & TECHNICAL DATA

## NEMA STANDARDS

### 6.6.3 Vertical Straight Sections

Vertical straight sections should be supported indoors at appropriate intervals permitted by the building structure; outdoor support intervals should be determined by wind loading. The maximum distance between vertical supports should not exceed 24' (7,320 mm) on centers.

### 6.6.4 Sloping Trays

Sloping trays should be supported at intervals not exceeding those for horizontal trays of the same design for the same installation.

### 6.6.5 Fittings as End of Run

A fitting which is used as an end of the run dropout should have a support attached to it, firmly reinforcing the fitting.

### 6.7 PROTECTION OF CABLE INSULATION

The inside of cable tray systems should present no sharp edges, burrs, or projections which could damage cable insulation.

### 6.8 THERMAL CONTRACTION AND EXPANSION

It is important that thermal contraction and expansion be considered when installing cable tray systems. If it is determined that expansion connectors are required, reference should be made to table on page 19 for maximum spacing between supports and to the table on page 19 to determine the proper splice plate setting.

The cable tray should be securely fixed at the support nearest to its midpoint between the expansion connectors and secured by expansion guides at all other support locations. The cable tray should be permitted longitudinal movement in both directions from that fixed point towards the expansion connectors.

Accurate gap setting at the time of installation is necessary for the proper operation of the expansion connectors. The following procedure should assist the installer in determining the correct gap:

**Step 1** - Plot the highest expected cable tray metal temperature on the maximum temperature vertical axis. Example's Value = 100°F. (See page 19).

**Step 2** - Plot the lowest expected cable tray metal temperature on the minimum temperature vertical axis. Example's Value = -28° F.

**Step 3** - Draw a line between these maximum and minimum temperature points on the two vertical axis.

**Step 4** - To determine the required expansion joint gap setting: Plot the cable tray metal temperature at the time of the cable tray installation on the Maximum temperature vertical axis. (Example's Value = 50° F).

Project over from the 50°F point on the maximum temperature vertical axis to an intersection with the line

between the maximum and minimum cable tray metal temperatures. From this intersection point, project down to the gap setting horizontal axis to find the correct gap setting value (Example's Value:  $\frac{1}{8}$ " gap setting). This is the length of the gap to be set between the cable tray sections at the expansion joint splice plate location.

**NOTE:** THE MAXIMUM GAP SPACE BETWEEN TRAY SECTIONS IS 1" (25 MM).

### 6.9 CABLE INSTALLATION

When installing cable in cable tray, it is important that care and planning be exercised so that the cable or the cable tray is not damaged or destroyed. The cable manufacturer should be contacted for maximum pulling tensions and minimum bending radii, and advice on prevention of "egging" or deformation of cable jacketing or shielding.

### NEMA CLASS

The NEMA Classifications for Cable Tray were established to simplify and standardize the specification of Cable Tray. This classification is based on the working load (the total weight of the cables) and the support span (the distance between supports). The NEMA VE1 specifications are contained in Section 2.

Atkore International is a member of NEMA and offers designs in all NEMA cable tray classifications.

### Cable Load/Working Load

The Cable Load or the working load is the total weight of the cables to be placed in the tray. The NEMA classes are based on cable loads of 50#, 75#, and 100# per Lineal Foot. This is the total weight of cables in the tray. For purposes of selecting a suitable tray, this weight should be rounded off to the next higher NEMA working (allowable) load.

### Support Spans

Support span is the distance between the supports. The NEMA standard support spans are based on 8', 12', 16' and 20'.

### NEMA LOAD/SPAN DESIGNATIONS

Class Designation	Support Span Feet	Working Load Lbs./Linear Ft.
8A	8	50
8B	8	75
8C	8	100
12A	12	50
12B	12	75
12C	12	100
16A	16	50
16B	16	75
16C	16	100
20A	20	50
20B	20	75
20C	20	100

## PRODUCT FEATURES & TECHNICAL DATA

### OVERVIEW

#### NEMA Classes

The following table summarizes the NEMA classes based on cable/working load and support span described previously.

To determine what NEMA load class is required for your project, refer to the National Electrical Code® (NEC®). Determine type of cable and the appropriate cable tray type based on NEC® Article 392 guidelines. Establish the number and type of cables required in each cable tray run; then calculate the total number of square inches of cable in the run. Using NEC®, Article 392.9, Tables 392.9(A), 392.9(C), 392.9(E), 392.9(F), and 392.10(A), determine the allowable cable fill for the type of cable tray and cable being used. The number of square inches of installed cable divided by the allowable cable fill percentage will determine the size of the cable tray needed. Calculated the total weight of cables (in pounds per linear foot) to be installed in the cable tray. Determine the frequency of cable tray supports (span).

**Example:** Project requires 50 multiple conductor cables in a tray. The cable is .5" in diameter and weighs .3 pounds per foot. The tray selected is a ventilated bottom trof tray and will be supported every 12 feet. **Tray Size**

**Calculation:** Area =  $3.14 \times .25^2 = 0.19625$  sq. in. per cable. 50 cables multiplied by .019625 sq. in. = 9.8125 total sq inches of cable. 9.8125 sq. in. divided by .5 (% fill allowed) = 19.625 sq. in. minimum needed within the tray. Divide 19.625 sq. in. by 4" (load depth of a tray) = 4.9" wide tray minimum. The closest standard tray is a 4" Load Depth x 6" Wide. **Weight Calculation:** 50 cables multiplied by .3 pounds per foot = 15 pounds per foot of cable. Select a NEMA 12A rated tray which will hold 50 pounds of weight when supported every 12 feet.

#### OTHER LOADING CONSIDERATIONS

It is important to note that when specifying loading requirements, there are other loading factors that may need to be considered over and above the actual cable loads.

#### Destruction Load Capacity

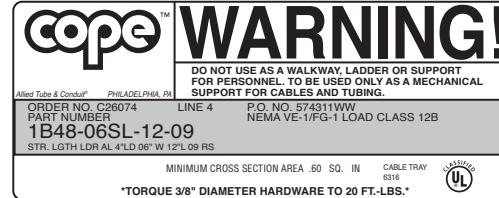

The total weight in the tray which causes the tray to collapse is called the "destruction load capacity". When trays do collapse, they generally do so by premature lateral buckling (compression) of the top flange.

#### Concentrated Loads

A concentrated load is a static weight applied between the side rails at mid span. When specified, these concentrated static loads may be converted to an equivalent uniform load ( $We$ ), in pounds per lineal foot, using the following formula:

$$We = 2 * \text{Concentrated Load} / \text{Support Span}$$

This load ( $We$ ) is then added to the static weight of the cable before selecting the appropriate NEMA load span designation.

Please note per the NEMA VE-1 guidelines all Cope® Cable Trays are labeled as follows:

#### ENVIRONMENTAL LOAD CONSIDERATIONS

Environmental loads should be considered in any outdoor installation, particularly when cable tray is to be covered. These loads include wind loads, snow loads, and ice loads. Specific information data concerning these loads can be obtained by contacting the Cope Factory. Other sources for this type of information can be obtained through the local building codes.

It is important to note that these types of loads need to be considered in terms of pounds per square feet, unlike the cable loads, which are calculated in terms of pounds per linear foot.

The following are general guidelines to follow:

#### Wind Loads

Additional wind loads need to be taken into account for all outdoor cable tray installations. In calculating wind loads, the most sever loading condition are wind pressures normal to the cable tray side rails. The following table outlines corresponding wind pressure associated with various wind velocities.

#### WIND PRESSURE

V(mph)	P(lbs/ft <sup>2</sup> )	V(mph)	P(lbs/ft <sup>2</sup> )
15	0.58	85	18.5
20	1.02	90	20.7
25	1.6	95	23.1
30	2.3	100	25.6
35	3.13	105	28.2
40	4.09	110	30.9
45	5.18	115	33.8
50	6.39	120	36.8
55	7.73	125	40
60	9.21	130	43.3
65	10.8	135	46.6
70	12.5	140	50.1
75	14.4	145	53.8
80	16.4	150	57.6

\*These values are calculated for an air density of 0.0765 lbs/ft<sup>3</sup>, representing a temperature of 60°F and barometric pressure of 14.7 lbs/in<sup>2</sup>

# PRODUCT FEATURES & TECHNICAL DATA

## OVERVIEW

V = Wind Speed

P = Wind Pressure

For example, a wind pressure side load for a 4" side rail with 50 mph wind is calculated as follows:  $6.39 * 4" / 12" = 2.13 \text{ lbs/ft}$

### Ice Loads

Ice is commonly seen building up on the top surface of covers and on the side rails of cable tray and must be taken into account when determining load conditions. The maximum design load added by ice can be calculated with the following formula:

$$LI = (WCT * TI) * DI \\ 144$$

LI = Ice Load (lbs/ft)

WCT = Width of the cable tray (in)

TI = Ice Thickness (in)

DI = Ice Density = 57 lbs/ft<sup>3</sup>

\*Depending on installation location and local building codes, the anticipated ice loads will vary. For a conservative estimate, an ice thickness of 1½" can be used.

### Snow Loads

Snow is measured by both density and thickness, and the additional load applied is dependent on both. The density and thickness of snow varies greatly, and additional design load incorporating snow loads should be determined by local building codes, and done on an individual basis.

### SAFETY FACTOR

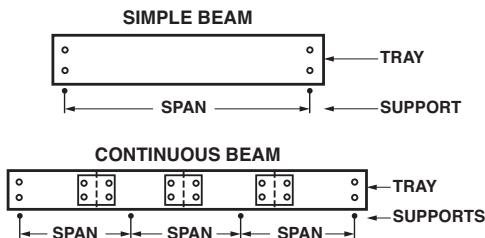

All loads stated in the Cope Selection Charts have a 1.5 safety factor, in accordance with the NEMA VE-1 Guidelines. A safety factor is the reserve strength, above the actual cable loading, for which a tray system was designed.

### Conversion of Safety Factor from 1.5 to 2.0

The loads stated in the Selection Charts have a safety factor of 1.5 per the NEMA VE-1 guidelines. To convert the load carrying capabilities, as listed in these charts, to a 2.0 safety factor, multiply the stated loads by 0.75.

### Testing Methods

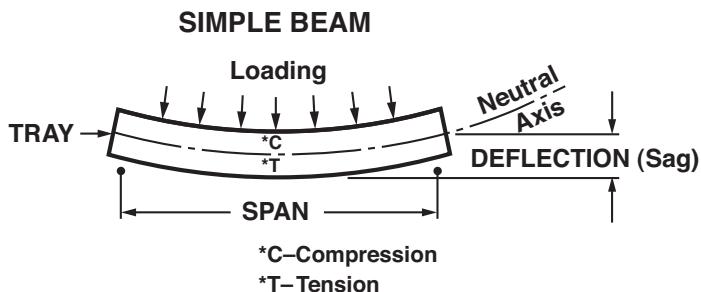

Loading data stated in the catalog has been derived from actual testing of the tray systems, or by means of structural calculations. These figures were based on Simple Beam calculation, per the NEMA VE-1 guidelines.

When tray is supported as a simple beam, the load causes bending moments all along the beam resulting in deflection, called sag, inducing stress in the beam. The material above the longitudinal center line (neutral axis) is compressed. Material below is stretched and is in tension. The maximum stress in a simple beam is at the center of the span. Failure of cable tray will occur in compression before tension. This is why tray rails often have stiffened top flanges.

A simple beam is present when a single straight section of tray is supported on each end. When a series of straight sections are connected and supported by more than one support it is referred to as a continuous beam. The NEMA VE-1 Standards consider only simple beams for testing purposes, due to the following reasons:

1. It requires maximum properties for a given load and support spacing.
2. It is easiest to approximate by calculation.
3. It represents the most severe or worst case loading.
4. Destruction load capacities can be easily verified.

### DEFLECTION VS. ECONOMY

Cable tray that meets all performance and dimensional criteria with the safety factor specified without regard for deflection is the most economical tray for the installation. When deflection limitations are imposed, a less economical tray system may result. We recommend that deflection limitations should be imposed in only the most stringent situations. If deflection is a concern, we recommend these maximum limits for the optimum design.

	Simple Beam Span	
	12'	20'
Steel	1/100	1/75
Aluminum	1/75	1/50

### CAVITY SIZE - LOAD DEPTH/WIDTH OF TRAY

The size of the cable tray cavity is determined specifically by the electrical requirements and by the specific cables being used to meet those requirements.

Article 392 of the National Electrical Code® lists the specific requirements concerning allowable Cable Fill. It is imperative that the size of the cavity meets the conditions set forth by the NEC®, specifically:

- Types of cables allowed in which type of cable trays
- Requirements for arranging the cables in the trays.

The NEC® breaks down the allowable cable fill into three main categories:

- **Multi-Conductor:** The number of multi-conductor cables rated at 2000 volts or less in cable tray.
- **Single Conductor:** The number of single conductor cables rated at 2000 volts or less in cable tray.
- **MV and MC Cables:** The number of MV & MC cables rated at 2001 volts or over in the cable tray.

Cable fill guidelines set forth by the NEC® are generally based on limiting heat build up in the trays. Where data or communications type cables are being installed, heat is not a critical issue and the allowable fill is determined by the total cross sectional area of the tray cavity:

Total Cross Sectional Area = (Width) x (Load Depth).

### LENGTH OF STRAIGHT SECTIONS

Cope Cable Tray is available in 12' and 24' lengths in accordance with the NEMA Standards. It is also available in 10' and 20' lengths in accordance with CSA Standards. Customized lengths are also available upon request.

The following factors need to be considered when specifying the lengths of the tray:

**Support Span** – The support span should not be greater than the tray length. This ensures that two splice plate connections will not fall within one support span.

**Space Constraints** – When installing trays in a limited space, as often encountered in commercial applications, 10' and 12' lengths of tray are easier to handle and therefore are better suited for those applications.

**Labor Costs** – Where trays are being installed in an industrial facility, where space is not as significant an issue, handling 20' and 24' lengths may be more economical. In this instance, half as many tray connections need to be made. Additionally, if the proper tray system is specified, support spans may be lengthened.

### RADIUS OF FITTINGS

Cable tray fittings are used to change directions both horizontally and vertically. The standard radii for cable tray fittings are 12", 24", and 36".

The radius of the fittings should be based upon minimum bending radius of the cables. This information can be obtained from the cable manufacturer.

Based on the total number of cables to be placed in the tray, it may be more practical to use the next higher radius.

### CABLE TRAY SUPPORT LOCATIONS

#### Straight Sections

A general rule of thumb is that the splice plates should not fall beyond the 1/4 point of the span, or the distance between supports. For example: On a 20' support span the splice plates should not be further than 5' away from the support location.

Under no circumstances should two cable tray splices fall between any pair of supports.

For special applications, mid-span splice plates can be furnished. Please contact the factory.

#### Fittings

Supports for cable tray elbows are critical. It is important to note that the cable tray will come under its greatest stress when cables are being pulled into the tray. Therefore, proper placement of supports is necessary to insure that the integrity of the tray system is maintained during the cable pulling operation.

The diagrams on page 22 shows the recommended support locations for fittings.

### Thermal Expansion and Contraction

It is important to use expansion connectors when installing long runs of cable tray. The number of expansion connectors required will depend on:

- (1) the maximum temperature differential
- (2) the tray material being installed

Cope Expansion Connectors allow 1" of travel. This table illustrates how often expansion splice plates must be used.

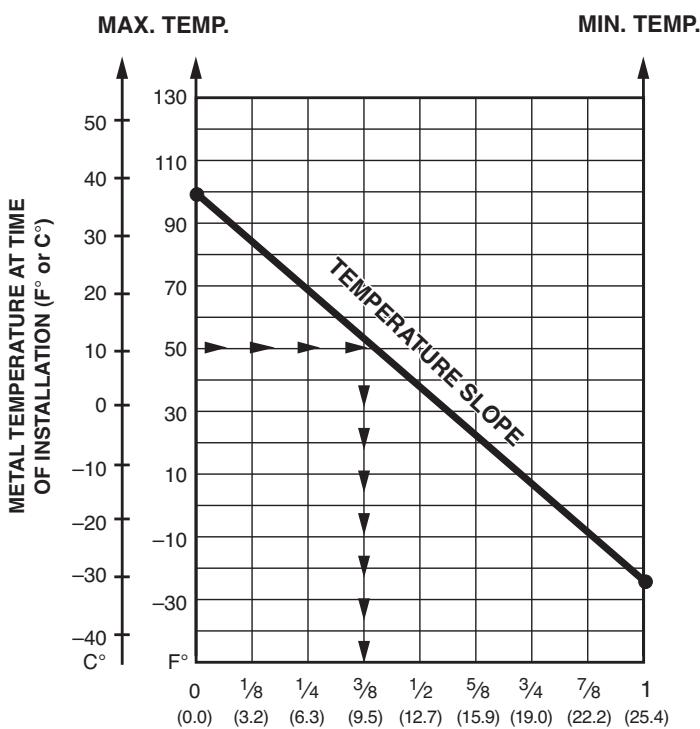

Temperature Difference	Dist. Between Expansion Joints		
	Steel	Aluminum	Copper
25°F (14°C)	512' (156m)	260' (79m)	363' (111m)
50°F (28°C)	256' (78m)	130' (40m)	182' (55m)
75°F (42°C)	171' (52m)	87' (27m)	121' (37m)
100°F (56°C)	128' (39m)	65' (20m)	90' (27m)
125°F (70°C)	102' (31m)	52' (16m)	72' (22m)
150°F (83°C)	85' (26m)	43' (13m)	60' (18m)
175°F (97°C)	73' (22m)	37' (11m)	52' (16m)

# PRODUCT FEATURES & TECHNICAL DATA

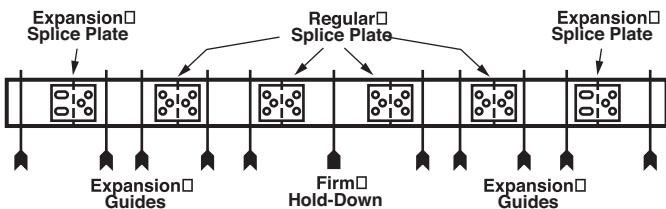

## OVERVIEW

The following table is used to determine the proper gap setting between trays. The metal temperature determines the proper gap setting at the time of installation. Establish maximum and minimum temperatures in summer and winter for the area. Draw a line connecting them. Using the metal temperature at time of installation ( $^{\circ}\text{C}$  or  $^{\circ}\text{F}$ ) draw horizontal to temperature slope and plot straight down to find gap distance at expansion joint.

The following diagram illustrates the proper installation of an expansion system.

It is important to note that grounding straps are required when expansion connections are made. This will insure proper grounding continuity.

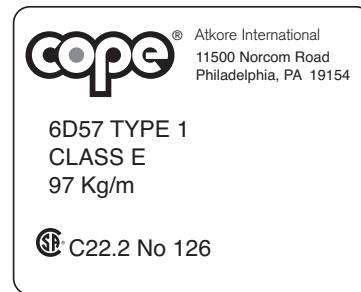

## ELECTRICAL GROUNDING

The National Electrical Code<sup>®</sup>, Article 392-7 allows for Cable Tray to be used as an equipment grounding conductor in commercial and industrial establishments. The following table lists specific ampere ratings and the minimum cross sectional area requirements for each rating.

Atkore International produces trays that meet the National Electrical Code<sup>®</sup> (ANSI/NFPA 70), and are classified by Underwriters Laboratories, Inc. (UL) as equipment ground conductors. These can be used for any project worldwide except where another standard may take precedence, such as the Canadian Standards Association.

For projects requiring adherence to the Canadian Standards Association (CSA), Cope products as shown in the CSA Selection Charts, pages 34-35, and 142-143 are certified as complying with CSA C22.2 No. O and No. 126 and will bear the CSA Mark as shown below.

When required, the trays can be installed per the Canadian Electrical Code Parts I and II (CEC). Cope trays and splice plates meet the bonding requirements of the CSA Standards and the CEC.

## PAINTING CABLE TRAY

Paintable Grade Cable Tray is available at special request, contact Cope Engineering for additional information or specific product inquiries at 800-882-5543.

\* Total cross sectional area of both side rails for ladder and trof type trays, or the minimum cross sectional area for metal in channel type cable trays or cable trays of one piece construction.

\*\* Steel cable trays shall not be used as equipment grounding conductors for circuits with ground-fault protection above 600 amperes. Aluminum cable trays shall not be used as equipment grounding conductors for circuits with ground-fault protection above 2000 amperes.

Cope CSA steel designs are offered in Type 1 (HDGAF) finish and aluminum with plain finish. Available are ladder, vented, and solid bottom cable Trofs for 3 meter spans and ladder type for 6 meter spans.

The cross-sectional area for each Cope Cable Tray system, straight sections and fittings, can be found on the appropriate Cope Selection charts contained within this publication. In addition all Cope Cable Tray, straight sections and fittings, are supplied with pressure sensitive labels indicating the cross sectional area of both side rails, as required by the (NEC) National Electrical Code®, Article 392.

**Bonding Jumpers / Straps**

Cable Tray connections made with Cope's standard rigid splice plates do not exceed .00033 ohms net resistance, and are classified in Underwriters Laboratories Classification Program. These rigid type connections do not require electrical bonding straps. Cope's UL assigned number is "E60627", UL cards will be furnished upon request. Cope is listed in the UL Electrical Construction Directory under code CYNW.

Electrical bonding straps are required where cable trays are joined by connectors which allow for movement, such as vertical adjustable connectors, horizontal adjustable connectors, and expansion connectors.

Proper grounding is also necessary where cable trays run parallel to each other, are stacked upon one another, and in other instances, where tray runs are discontinuous. Further questions concerning grounding issues should be directed to Atkore International.

**SUMMARY**

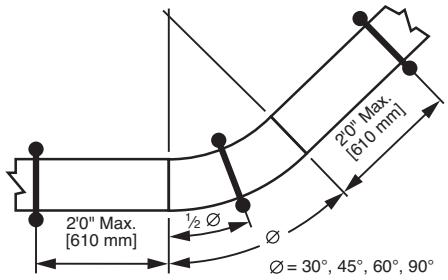

You are now ready to select the best Cope Cable Tray system to meet your needs. By now, we hope you've decided to select the system using the NEMA CLASSIFICATION (8A, 12B, 20C, etc.) which makes your work so much easier. Selection is also possible using physical dimensions, performance, or any combination of these data listed in our exclusive NEMA oriented Cope selection charts. As always, should you need additional information, we suggest you contact your nearest Cope Representative or call Atkore International directly.

**Note:** To convert 1.5 safety factor to 2.0 multiply w, d, k by 0.75.

W=Pounds per linear foot

Metric: for kg/m multiply w by 1.48

d=Deflection (inches)

k= Deflection (in.) for each pound of load

†= Denotes k is less than .001 inch

# LADDER CABLE TRAY SYSTEM

## OVERVIEW

**COPE SWAGE LADDER** Is a structure consisting of two side rails, connected by individual rungs and is manufactured in accordance with NEMA Standard #VE-1. Cope rungs are fastened to the side members by an exclusive swaging process. This assembly method insures a superior mechanical and electrical connection.

**Side Members** - Cope side members are designed with top and bottom flanges turned outward. This simplifies fastening the cable tray to the supports. Cable tray with outward facing flanges allows complete access within the cable loading area and eliminates the possibility of cable damage from sharp edges within the cable area. The return on the top flange strengthens the side member and allows cable to be smoothly dropped over the side.

**Rung** - Cope ladder rungs are 1.00" diameter tubing flattened on top to provide a cable bearing surface. This construction allows cable to drop out anywhere without contacting a sharp edge.

**Rung Spacing** - The interval at which rungs are swaged to the side member. This is measured from centerline of rung to centerline of rung. Cope manufactures straight lengths with four standard rung spacings; 6", 9", 12", and 18". Rung spacing selected is generally determined by size and type of cable being supported. When in doubt, 9" rung spacing is a generally accepted compromise.

**Length** - The longitudinal dimensions of standard Cope Cable Ladder are 10', 12', 20' or 24'.

**Width** - The transverse dimensions of Cope Cable Ladder are measured inside, (from side member web to side member web), and are furnished in seven standard widths: 6", 9", 12", 18", 24", 30", or 36".

**Overall Width** - Overall ladder width is equal to the inside or nominal width plus the width of side member flanges.

**Load Depth** - Measured from top surface of rung to top of side member. This is not to be confused with overall height. Cope manufactures four loading depths: 3", 4", 5", and 6" in accordance with NEMA Standard VE-1. All Cope part numbers refer to the load depth of the tray.

**Overall Height** - Cope overall height is equal to the loading depth plus 1-1/4".

**Fittings** - For changing direction horizontally and vertically, Cope manufactures elbows, tees and crosses in all widths and loading depths. Fittings are available in three standard radii; 12", 24", and 36". Cope maintains a nominal 9" rung spacing through the centerline of all fittings.

## OVERVIEW

### COPE CABLE LADDER FEATURES IMPORTANT INDUSTRY-LEADING FEATURES:

#### 1. Universal Curvilinear Splice Plate System

The splice plates for rigid connections have a slight curve so they can be used on straight sections or fittings. Tightening of the fastener pulls the plate flush with the side rail. The fasteners are snug and the joint is superior structurally and electrically. Even when tightened by hand, there is pressure on the fastener to hold it securely.

**Note:** Heavy Duty, Mid Span Splice Plates available upon request.

#### 2. Zero Tangent Fittings

Tangent as referred to on cable tray fittings is the straight at the end of the curve to accommodate a flat splice plate. Zero Tangent Fittings facilitates installation when parallel cable trays must be located at minimum distances from each other, such as motor control centers and switch gear centers. COPE ZERO TANGENT FITTINGS CAN SAVE UP TO A MINIMUM OF 6" PER ROW OF TRAY.

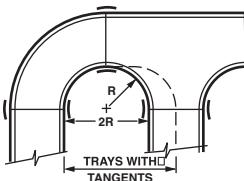

#### 3. Cope's Swaged Rung Cable Ladder System Process

The heart of the Cope design is the tubular rung and its connection to the side rail by cold swaging... a process where special machinery compresses and locks the tubular rung material around both the inside and outside of the cable tray side rails. This connection is made without the use of heat, which can potentially disturb the molecular structure of the metal and weaken it.

The tubular rung is flattened during the swaging process to ensure a proper cable bearing surface.

**Testing** - The superior strength of the swaged ladder tray system has been verified in independent testing conducted by the Pittsburgh Testing Laboratory.

Pullout loads of 2500 lbs. were reached. Other tests show the same type rungs, when welded, had a 35% lower pullout load. The strength of the swage also maintains the 90° relationship of the rungs to

#### Ordering Information:

Flange Width (2=13/16", 4=1-1/4")

Load Depth (3", 4", 5", 6")

Radius (12", 24", 36")

Basic Part (9F, 6F)

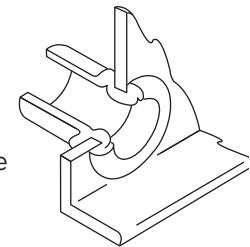

Width (06", 09", 12", 18", 24", 30", 36", 42", 48")

the side rail. The tubular rungs, which are very stiff, transmit the cable loads to the side rails resulting in much less deflection than in a similar system with welded rungs.

For a copy of the independent test results, please contact the factory.

#### Swage Advantages -

Cold swaging allows for the side rails to be turned outward, simplifying cable installation, and provides 100% access to the cables. The cold swaging yields the most rigid tray system in the industry.

The swaged rung connection resists stresses in all directions; up or down, side to side, or in and out. The swaged ladder also resists the camber and warping effects encountered in a typical welded system.

The increased rigidity means that a 24' section of tray can be lifted on one end with little or no twisting or bending of the tray section. This rigid construction makes the trays safer for field personnel to handle and reduces shipping damage.

**Electrical Properties** - Electrically, the 106 tons of pressure in the swaging process virtually eliminates the interstices and a homogenous electrical path results:

Resistance of Cope Aluminum Swaged Tray:  
31 microhms

Resistance of Cope Steel Swaged Tray:  
37.3 microhms

Resistance of Popular Aluminum Welded Tray:  
101 microhms

**Conclusion** - Cold swaging yields a very strong, efficient and aesthetically pleasing system that has stood the test of time and offers installation savings due to its ease of handling.

# LADDER CABLE TRAY SYSTEM

## PART NUMBERING SYSTEM:

Please pay careful attention to the part numbering structure. Example: Catalog No. 1B48-06SL-12-09 is a 4" load depth aluminum ladder with a 1316" flange, 6 inches wide, straight length 12 feet long, rungs on 9" centers. Please make sure to use the system numbers from pages 26 through 29 when ordering.

### SYSTEM NUMBER (STRAIGHT SECTION ONLY) -

The first four digits make up the system number which identifies the structural, dimensional and material characteristics of the straight length. It is made up of the side rail digits indicating the side rail thickness and flange width, the load depth (inside, in inches), and material finish (galvanized, aluminum or coated).

**PREFIX NUMBER (FITTINGS ONLY)**- Fittings are ordered using the 3-digit prefix number given in the charts on the fitting pages. Fittings do not have stiffened upper flanges.

**WIDTH** - Identifies the inside width of the tray in inches. **Note:** Sizes 42" and 48" are not recognized by NEMA

**BASIC PART NUMBER** - Identifies the straight length, fitting or accessory.

Thickness Steel (Ga.)	Flange Width	Load Depth	Material/ Finish
8 - 18 ga.	2 - 13/16" (21mm)	3" (76mm)	6 - Mill-Galv.
6 - 16 ga.	4 - 1 1/4" (32mm)	4" (102mm)	7 - HDGAF
4 - 14 ga.	5 - 1 1/2" (38mm)	5" (127mm)	8 - Aluminum
2 - 12 ga.	6 - 1 3/4" (45mm)	6" (152mm)	T - 304SS
11 - 11 ga.	7 - 2" (51mm)		
<b>Thickness Alum (in.)</b>			
1 - Thinner	B - 13/16" (21mm)		
3 -	D - 1 1/4" (32mm)		
5 -**	E - 1 1/2" (38mm)		
7 -	F - 1 3/4" (45mm)		
9 - Thicker	G - 2" (51mm)		

\*\*Alum. extruded side rails are individually engineered to loads and spans

\*\*\* Contact factory for 42" and 48" width tray (not NEMA Standard)

**SECONDARY DIMENSION NUMBER** - Identifies the length of a straight section in feet, the radius of a fitting in inches, or the second width of a reducer in inches.

**RUNG SPACING** - Identifies the center-to-center distance between rungs on straight length. Nominal 9" (229mm) rung spacing maintained through center line of all fittings.

# LADDER CABLE TRAY SYSTEM

**cope®**

## COPE LADDER

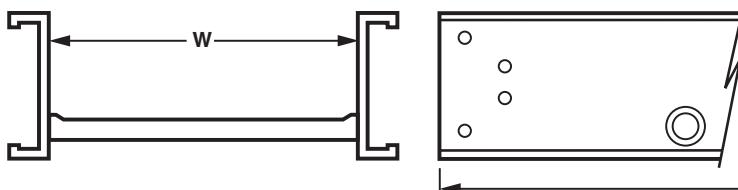

### STRAIGHT LENGTH [SL]

**COPE LADDER** is manufactured in 10' (CSA), 12', 20' (CSA), and 24' lengths; 6", 9", 12", 18", 24", 30", and 36" widths; and, 3", 4", 5", and 6" load depths. Rungs are 1" diameter tubes with a  $\frac{1}{8}$ " flattened cable support surface. 6", 9", 12", and 18" rung spacings are available. Fittings have nominal 9" rung spacing through center line. Dimensions given are inside. For overall widths add two flange widths of the system selected (see Selection Charts). Some systems have stiffened upper (top) flanges to obtain rigidity required (see Selection Charts).

Rungs are assembled to side rails by Cope's exclusive cold swaging process. Outward facing flanges allow full unobstructed access to contents of tray in width and depth.

Materials: Aluminum, Hot Dip Mill-Galvanized (pre galvanized) to ASTM A-653, Hot Dip Galvanized After Fabrication (HDGAF) to ASTM A-123, Stainless Steel (Type 304 and 316). Sufficient connectors are supplied to assemble straight sections and fittings for each order. Connectors for field cuts to be ordered separately (see Connectors).

# LADDER CABLE TRAY SYSTEM

## CSA ORDERING INFORMATION

### COPE CSA STANDARDS C22-2 CABLE TROF LADDER TYPE

**HOW TO ORDER:** Explanation of Cope's Canadian Standards cable tray catalog numbers is described below. Use the system numbers given in selection charts for straight sections, or the fitting prefix numbers given in fitting tables. Be sure to follow system number or the fitting prefix with the item "description" number. The list below gives the CSA certified item carrying the CSA label.

#### STRAIGHT LENGTH

#### SYSTEM NUMBER (STRAIGHT SECTION ONLY) -

The first four digits make up the system number which identifies the structural, dimensional, and material characteristics of the straight length. It is made up of the side rail digits indicating the side rail thickness and flange width, the load depth (inside, in inches), and material finish (galvanized, aluminum or coated).

**PREFIX NUMBER (FITTINGS ONLY) -** Fittings are ordered using the 3-digit prefix number given in the charts on the fitting pages. Fittings do not have stiffened upper flanges.

**WIDTH** - Identifies the inside width of the tray in inches.

**BASIC PART NUMBER** - Identifies the straight length, fitting, or accessory.

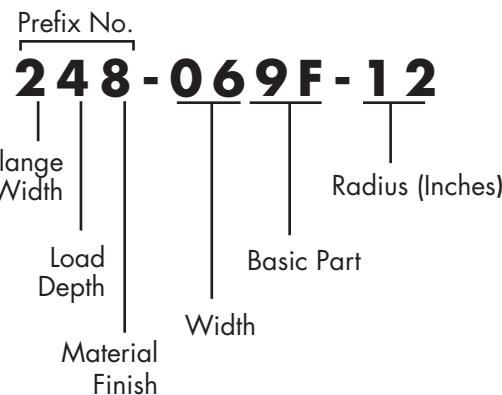

Thickness Steel (Ga.)	Flange Width	Load Depth	Material/ Finish
8 - 18 ga.	2 - $\frac{13}{16}$ " (21mm)	3" (76mm)	7 - HDGAF
6 - 16 ga.	4 - 1 $\frac{1}{4}$ " (32mm)	4" (102mm)	CSA Class 1
4 - 14 ga.	6 - $\frac{1}{2}$ " (45mm)	5" (127mm)	8 - Aluminum
	*B - $\frac{13}{16}$ " (21mm)	6" (152mm)	Plain Finish
<b>Thickness Alum (in.)</b>	<b>*D - 1 <math>\frac{3}{4}</math>" (32mm)</b>		
1 - Thinner			
3 -			
5 - **			
7 - Thicker			

\*Stiffened Upper Flange

\*\*Alum. extruded side rails are individually engineered to loads and spans

#### FITTINGS

**SECONDARY DIMENSION NUMBER** - Identifies the length of a straight section in feet, the radius of a fitting in inches, or the second width of a reducer in inches.

**RUNG SPACING** - Identifies the center-to-center distance between rungs on straight length. Nominal 9" (229mm) rung spacing maintained through center line of all fittings.

#### DESCRIPTIONS

Width (in. ***	Basic Part Number	Length	Rung Spacing	Radius (in.)
-06=6" (152mm)	SL (Straight Len.)	- 12' (3.7m)	06-6" (152mm)	-12=12" (205mm)

\*Also recommended for 3 meter support spans

**CSA LOADS**

Identify the desired load designation needed for your project from the chart below. Both CSA Class and NEMA designations are listed by load capability and span. Then select the CSA Certified Cope System from the table above. Where CSA C22.2 is not mandatory, you may want to consider other Cope systems offered on the selection charts (page 25 thru 29).

Load, kg/m (lb/ft)	Span, m (ft)				
	2.4 (8)	3.0 (10)	3.7 (12)	4.9 (16)	6.0 (20)
37 (25)	—	A	—	—	—
67 (45)	—	—	—	—	D
74 (50)	8A	—	12A	16A	20A
97 (65)	—	C	—	—	—
112 (75)	8B	—	12B	16B	E or 20B
149 (100)	8C	—	12C	16C	20C
179 (120)	—	D	—	—	—
299 (200)	—	E	—	—	—

**Note:** 8A/B/C, 12A/B/C, 16A/B/C, and 20A/B/C have been NEMA designations. A, B, C, D and E have been CSA designations

**RECEIVING, INSTALLING, AND MAINTENANCE**

The proper care and handling of cable trays by the receiver and installers is very important to insure a safe installation that will meet the intended service life. Cope has an installation guide available to assist the installers and those who will maintain the installed system.

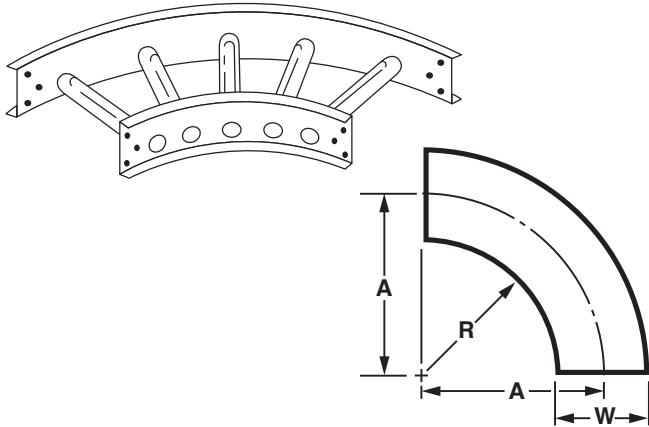

**DIMENSIONS AND STRUCTURAL PROPERTIES: COPE CSA SYSTEMS**

The performance of the Cope cable tray systems certified by CSA is given above. Structural properties of straight sections, though not required to be listed, are given in the Cope NEMA selection charts, in English units. Dimensions of straight sections and certified fittings are furnished in English and metric units for use in layout and/or entry into computerized systems.

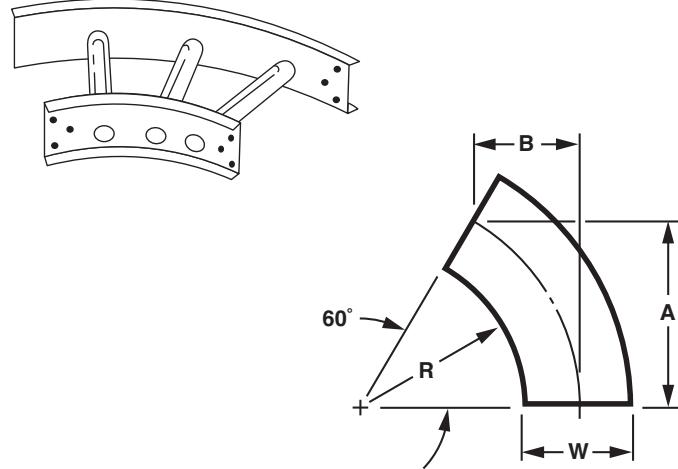

**Note:** For other CSA approved systems please contact the factory.

for Electrical  
Grounding Chart

# LADDER CABLE TRAY SYSTEM

## ELECTRICAL GROUNDING CHART

Table 1 below provides the Minimum Cross Sectional area for two side rails. Using the Fitting Prefix Number (248), the proper value is determined by the Material (column 3), the Flange Width (column 1), and Load Depth (column 2). Locate the line containing the Load Depth (column 1) and follow it to the right to the appropriate Flange Width and Material.

TABLE 1

Fitting Prefix Number			Min. X-Sect for 2 Rails (NEC® Table 392.7B)			
Flange	Load Depth	Material	Aluminum		Steel	
			13/16"	1 1/4"	13/16"	1 1/4"
2 - 13/16"	3"	6 - Mill Gal	0.60	0.60	0.40	0.70
4 - 1 1/4"	4"	7 - HDGAF	0.60	0.60	0.40	0.70
	5"	8 - Alum.	0.60	1.00	0.70	0.70
	6"		0.60	1.00	0.70	1.00

## TYPICAL SPECIFICATIONS

By specifying the NEMA class designation, you will use the simplest, clearest, and most complete method of specification available and automatically incorporate support span in feet, working (allowable) load in pounds per linear foot, a safety factor of 1.5, a concentrated load, if present; and, all other design, manufacturing, and test standards including electrical continuity.

## SPECIFICATION ALUMINUM COPE LADDER SYSTEM

Cable Ladder shall be manufactured by a company regularly engaged in the manufacture of metal cable trays and shall be a member of NEMA. Trays shall conform to NEMA Metal Cable Tray Standard Publication VE-1 (latest issue).

1. Cable ladder shall be NEMA Classification 12B of the widths indicated.
2. Material shall be aluminum alloy with side rails and rungs of 6063.
3. Finish shall be natural.
4. Inside load depth to be NEMA Standard 3".
5. Fittings shall be 12" radius for control cables and 24" radius for power cables. (This must be commensurate with the cable manufacturer's recommended minimum bending radius.)
6. All top level trays in stacks and single runs to have raised, peaked aluminum ventilated covers with heavy duty hold down clamps every 3'-0".
7. Install expansion connectors, expansion guides, and hold down clamps per NEMA Standard VE-1

Find that value in Table 2, follow it to the right to the Material column to determine the Maximum Ground Fault Amperage.

TABLE 2

X-Sect Area	Maximum Ground Fault Amperage (in Amps)	
	Aluminum	Steel
.40 sq in	-	100
.60 sq in	1000	-
.70 sq in	-	200
1.00 sq in	1200	400

### For Example:

If the fitting prefix is 248, the Flange is 13/16", the Load Depth is 4", and the Material is Aluminum. The Minimum Cross Sectional Area (X-Sect Area) is 0.60 sq. in. The Amperage is 1000.

All you need to do is add the desired load depth, rung spacing, radius of fittings, metal, and finish. You may add accessory information pursuant to your project. Here is a typical specification for an outdoor tray system where the working (allowable) load has been determined to be approximately 75 pounds per foot on support spans of 12'-0".

8. Where slopes or horizontal bends of trays are not at the Standard NEMA angles, use adjustable connectors. If the angle is too great for cable bending radius, use combinations of fitting and adjustable connectors.
9. Separate all cables of different voltages in the same tray using the manufacturer's standard barriers and barrier hold down system.
10. The Cable Ladder system will be used as an equipment grounding conductor.
11. To save space fittings shall have no tangents. To facilitate field installation, use one pair of universal type connector plates for rigid joints.
12. Cable Ladder shall have outward facing side rails with tubular rungs assembled into side rails by cold swaging. Cable support surface on top of rungs to be flattened. Inside of tray shall not have flanges or other projections. Full access to the contents of the Cable Ladder shall be available.
13. Trays shall be Cope Cable Ladder System Number 3B38 as manufactured by Atkore International.

# 4

Economical Flange in Welded Cable Ladder/Trof System for  
Electrical, Telephone, Computer Control & Instrumentation Cable

**Slotted Rungs** provided on trays 6", 9", 12", 18" and 24" wide.  
**Solid Rungs** provided on trays 30" and 36" wide.

# HAT CABLE TRAY SYSTEM

## OVERVIEW

**COPE HAT** is a prefabricated metal structure consisting of reinforced hat-shaped rungs, arc-welded to the side rails, and is manufactured to NEMA Standard VE-1. Cope Hat rungs are fastened to the side rails with an automatic, self-indexing MIG-arc-welding system, plug welding a  $\frac{1}{2}$ " diameter zone. The superior strength of the Cope plug weld withstands the rigors of shipping, handling, erection and cable support service.

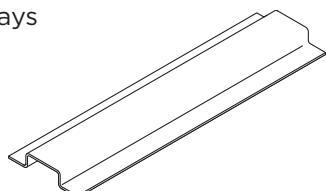

**Side Members** - Cope Hat side members are designed with top and bottom flanges turned inward. This minimizes the space requirements of the cable tray system, and allows a very low side rail height for each NEMA Standard VE-1 load depth.

**Rungs** - Cope Hat provides for hat shaped rungs.

**Solid Rungs** — Solid Hat shaped Rungs are standard on all tray widths.

Solid Hat Rungs for Steel trays are Hat shaped,  $2\frac{1}{4}$ " wide and provide for a  $\frac{7}{8}$ " cable bearing surface.

Solid Hat Rungs for Aluminum trays are Hat shaped,  $3\frac{1}{4}$ " wide and provide for a  $1\frac{1}{2}$ " cable bearing surface.

**Slotted Rungs** — are offered as a special order. Please contact Cope for more information

**Rung Spacing** — Cope manufactures straight lengths with four standard rung spacings; 6", 9", 12", and 18". The 6" rung spacing results in a 3  $3\frac{1}{4}$ " opening between rungs allowing the tray to be classified as a ventilated tray per NEMA Standard VE-1.

**Length** — The longitudinal dimensions of standard Cope Hat cable tray are 10', 12', 20', and 24'.

**Width** — The transverse dimensions of Cope Hat cable tray are measured inside, (from side member web to side member web), and are furnished in seven standard widths: 6", 9", 12", 18", 24", 30" and 36".

**Overall Width** — Overall tray width is equal to the inside or nominal width plus the thickness of the two side rail webs.

$$\text{Overall Tray Width} = \text{Nominal} + \frac{3}{16}'' \text{ Width}$$

**Load Depth** — Measured from the top surface of the rungs to the top of the side member. Cope manufactures four loading depths;  $2\frac{7}{8}$ ",  $3\frac{5}{8}$ ",  $4\frac{5}{8}$ ", and  $5\frac{5}{8}$ " corresponding to the four nominal loading depths in NEMA Standard VE-1; 3", 4", 5" and 6".

**Overall Height** — Cope Hat cable tray overall height is equal to the loading depth plus  $\frac{5}{8}$ ".

**Fittings** — For changing direction both horizontally and vertically, Cope manufactures elbows, tees, and crosses in all widths and loading depths. Fittings are available in three standard radii; 12", 24", and 36". Standard fittings maintain a nominal 9" rung spacing through the centerline of the fitting. Cope manufactures all standard fittings with zero tangents.

## OVERVIEW

### COPE HAT CABLE TRAY WITH Four IMPORTANT INDUSTRY-LEADING FEATURES:

#### 1. Compact Economical System -

Cope Hat cable tray is an extremely compact economical flange in cable tray system which allows the designer to utilize this cable tray in tight locations. The extremely low profile Hat Rungs ( $\frac{5}{8}$ " high) minimize the required side rail height while maintaining NEMA Standard VE-1 nominal load depths. Overall system height is only  $\frac{5}{8}$ " greater than the actual loading depth.

#### 2. Universal Curvilinear Splice Plate System -

The splice plates for rigid connections have a slight curve so they can be used on straight sections or fittings. Tightening of the fastener pulls the plate flush with the side rail. The fasteners are snug and the joint is superior structurally and electrically. Even when hand-tightened, there is pressure on the fastener to hold it securely.

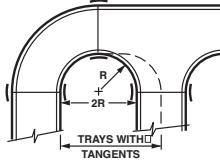

**Note:** Heavy Duty, Mid Span Splice Plates available upon request.

#### 3. Zero Tangent Fittings -

Tangent as referred to on cable tray fittings is the straight at the end of the curve to accommodate a flat splice plate. This wastes space in tightly packed areas, such as spreader rooms, where the heat of thousands of cables accumulate. Eliminating tangents allow more tray runs to distribute the heat.

**COPE ZERO TANGENT  
FITTINGS CAN SAVE UP TO 12"  
PER ROW OF TRAY.**

**BONUS:** Inspection for proper installation of splice plate is visual. If the plate is bowed away from the rail, nuts must be tightened.

#### 4. The Exclusive Auto MIG-Arc-Welded Assembly System -

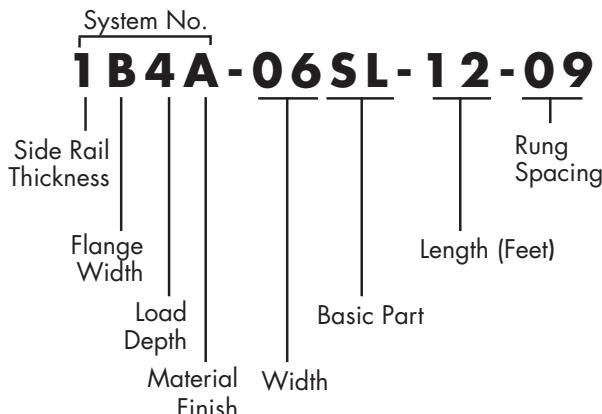

Cope Hat rungs on straight sections are assembled to the side rails using an automatic, self indexing MIGarc- welding system fusing a  $\frac{1}{8}$ " diameter zone. These welds are 700% larger and stronger than the common resistance (spot) weld in use today. Electrical properties of the assembly are unequalled; are well within the NEMA requirements due to the continuous electrical path. The mechanical strength of this welded assembly withstands the rigors of shipping, handling, installation, and service. The size of the weld keeps the vertical axis of the side rail from sloping inward under load. The weld maintains the 90° angle between the side rail and bottom. This allows full use of the section properties. Spot welds do not permit this. Also, stresses on spot welds (barely  $\frac{1}{8}$ " in diameter) are so severe that breakage often occurs during shipping and installation. Cope Hat fittings are also assembled by MIG-arc welding.

## PART NUMBERING SYSTEM:

### STRAIGHT LENGTH

### FITTINGS

### SYSTEM NUMBER (STRAIGHT SECTION ONLY)

- The first four digits make up the system number which identifies the structural, dimensional, and material characteristics of the straight length. It is made up of the side rail digits indicating the side rail thickness and flange width, the load depth (inside, in inches) and material finish (galvanized, aluminum or coated).

**PREFIX NUMBER (FITTINGS ONLY)** - Fittings are ordered using the 3-digit prefix number given in the charts on the fitting pages. Fittings do not have stiffened upper flanges.

Thickness Steel (Ga.)	Flange Width	Load Depth	Material Finish
8 - 18 ga.	2 - $\frac{13}{16}$ " (21mm)	3" (76mm)	P - Mill-Galv.
6 - 16 ga.	4 - 1 $\frac{1}{4}$ " (32mm)	4" (102mm)	G - HDGAF
4 - 14 ga.	7 - 2" (51mm)	5" (127mm)	A - Aluminum
2 - 12 ga.	6" (152mm)	S - 304SS	
11 - 11 ga.			
<b>Thickness Alum (in.)</b>			
1 - Thinner	B - $\frac{13}{16}$ " (21mm)		
3 -	D - 1 $\frac{1}{4}$ " (32mm)		
5 -**	G - 2" (51mm)		
7 -			
9 - Thicker			

\*\*Alum. extruded side rails are individually engineered to loads and spans.

**Slotted Rungs** provided on trays 6", 9", 12", 18" and 24" wide

**Solid Rungs** provided on trays 30" and 36" wide.

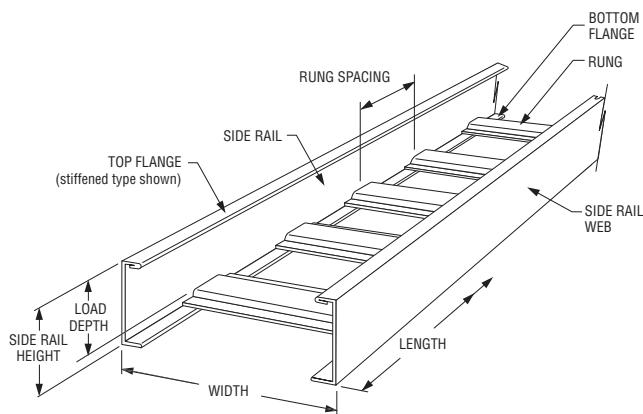

**WIDTH** - Identifies the inside width of the tray in inches.

**BASIC PART NUMBER** - Identifies the straight length, fitting, or accessory.

**SECONDARY DIMENSION NUMBER** - Identifies the length of a straight section in feet, the radius of a fitting in inches, or the second width of a reducer in inches.

**RUNG SPACING** - Identifies the center-to-center distance between rungs on straight length. Nominal 9" (229mm) rung spacing maintained through centerline of all fittings.

Description	Width (in.)	Basic Part Number	Length	Rung Spacing

			-36=36" (914mm)	

**STRAIGHT LENGTH [SL]**

Cope Hat cable tray is manufactured in 10', 12', 20' and 24' lengths; 6", 9", 12", 18", 24", 30" and 36" widths and 3", 4", 5", and 6" nominal load depths. Sufficient connectors are supplied to assemble straight sections and fittings for each other. Connectors for field cuts must be ordered separately.

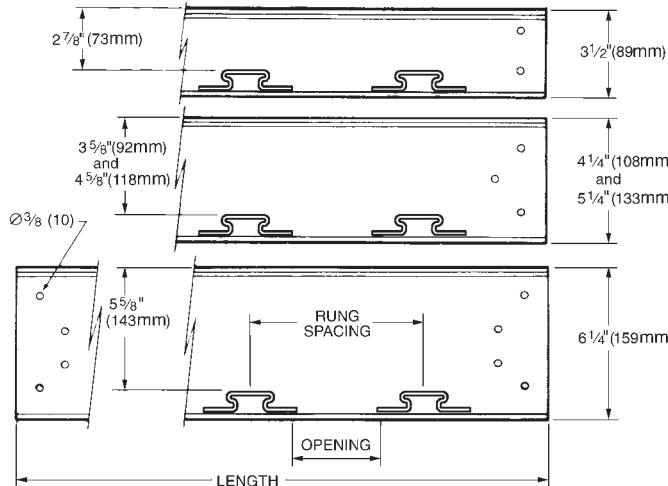

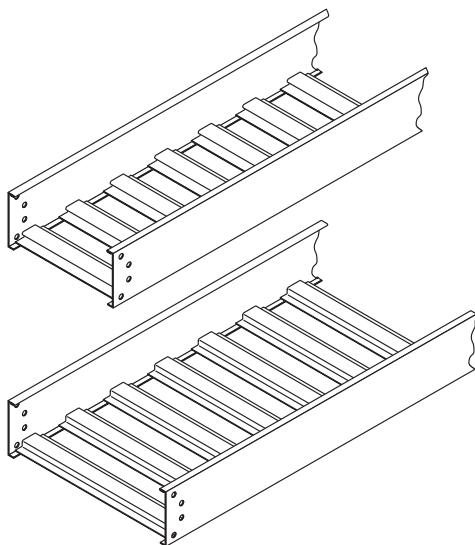

**CATALOG NUMBER**

SYSTEM	BASIC WIDTH	BASIC NO.	LENGTH (FT.)	RUNG SPACING
See Pages 102 – 105	-06	SL	-10	-04
	-09		-12	-06
	-12		-20	-09
	-18		-24	-12
	-24			-18
	-30			
	-36			

*Example:* 1B4A-06SL-12-09 is a 4" load depth aluminum Hat with a  $1\frac{3}{16}$ " flange, 6" wide, 12' long, with 9" rung spacing.

# HAT CABLE TRAY SYSTEM

## ELECTRICAL GROUNDING CHART

Table 1 below provides the Minimum Cross Sectional area for two side rails. Using the Fitting Prefix Number (24A), the proper value is determined by the Material (column 3), the Flange Width (column 1) and Load Depth (column 2). Locate the line containing the Load Depth (column 1) and follow it to the right to the appropriate Flange Width and Material.

TABLE 1

Fitting Prefix Number			Min. X-Sect for 2 Rails (NEC® Table 392.7B)			
Flange	Load Depth	Material	Aluminum		Steel	
			13/16"	1 1/4"	13/16"	1 1/4"
2 - 13/16"	3"	6 - Mill Gal	0.60	0.60	0.40	0.70
4 - 1 1/4"	4"	7 - HDGAF	0.60	0.60	0.40	0.70
	5"	8 - Alum.	0.60	1.00	0.70	0.70
	6"		0.60	1.00	0.70	1.00

## TYPICAL SPECIFICATIONS

By specifying the NEMA class designation, you will use the simplest, clearest, and most complete method of specification available and automatically incorporate support span in feet, working (allowable) load in pounds per linear foot, a safety factor of 1.5, a concentrated load if present, and, all other design, manufacturing, and test standards including electrical continuity.

## SPECIFICATION - COPE HAT LADDER SYSTEM

Cable Hat Ladder shall be manufactured by a company regularly engaged in the manufacture of metal cable trays and shall be a member of NEMA. Trays shall conform to NEMA Metal Cable Tray Standard Publication VE-1 (latest issue).

1. Cable ladder shall be NEMA Classification 12B of the widths indicated.
2. Material shall be aluminum alloy 6063-T6 for side rails and 5052-H34 for rungs.
3. Finish shall be natural.
4. Inside load depth to be NEMA Standard 4".
5. Fittings shall be 12" radius for control cables and 24" radius for power cables. (This must be commensurate with the cable manufacturer's recommended minimum bending radius.)
6. All top level trays in stacks, and single runs to have raised peaked, aluminum ventilated covers with heavy duty hold down clamps every 3'-0"
7. Install expansion connectors, expansion guides, and hold down clamps per NEMA Standard VE-1.

Find that value in Table 2, follow it to the right to the Material column to determine the Maximum Ground Fault Amperage.

TABLE 2

X-Sect Area	Maximum Ground Fault Amperage (in Amps)	
	Aluminum	Steel
.40 sq in	-	100
.60 sq in	1000	-
.70 sq in	-	200
1.00 sq in	1200	400

### For Example:

If the fitting prefix is 24A, the Flange is 13/16", the Load Depth is 4", and the Material is Aluminum. The Minimum Cross Sectional Area (X-Sect Area) is 0.60 sq. in. The Amperage is 1000.

All you need to do is add the desired load depth, rung spacing, radius of fittings, metal and finish. You may add accessory information pursuant to your project. Here is a typical specification for an outdoor tray system where the working (allowable) load has been determined to be approximately 75 pounds per foot on support spans of 12'-0".

8. Where slopes or horizontal bends of trays are not at the Standard NEMA angles, use adjustable connectors. If the angle is too great for cable bending radius, use combinations of fitting and adjustable connectors.
9. Separate all cables of different voltages in the same tray using the manufacturer's standard barriers and barrier hold down system.
10. The Cable Hat Ladder system will be used as an equipment grounding conductor.
11. To save space, fittings shall have no tangents. To facilitate field installation use one pair of universal type connector plates for rigid joints.
12. Cable Ladder to have hat type rungs arc welded to side rails. Rungs shall not protrude below side rails. Outside depth shall not exceed inside depth by more than 5/8". Side rails to have flanges facing in. Trays shall be Cope Hat Ladder System No. 3B4A as manufactured by Atkore International.

† = Denotes k is less than .001 inch

# TROF CABLE TRAY SYSTEM

## OVERVIEW

**COPE TROF** is a prefabricated metal structure consisting of ventilated or solid bottoms, welded to the side rails, and are manufactured and tested to NEMA Standard VE-1. Straight sections, fittings (elbows, tees, crosses, reducers, etc.) and a full line of matching and interfacing accessories are available. Corrugations give great lateral rigidity to the bottom transmitting the load to the side rails. Lateral (transverse) deflection is nearly eliminated compared to rung type trofs where the rails are not continuously braced by the bottom.

Cope Corrugated bottoms do NOT limit the tray load capacity. Corrugated bottoms have 1" wide ribs on 2" centers. Ventilation holes in the valleys of the corrugations are  $\frac{1}{16}$ " diameter on one inch (1") centers. Free passage of air through the openings results in a 68% open area at the elevated cable support surface on top of ribs. Solid Trof have the same corrugations but have no holes.

**Note:** Where drain holes are required, one can be placed in the center of each valley, if specified.

## COPE TROF WITH Three IMPORTANT INDUSTRY-LEADING FEATURES:

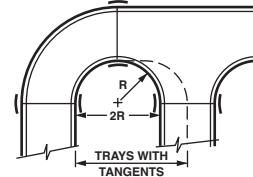

### 1. New Universal Curvilinear Splice Plate System

The splice plates for rigid connections have a slight curve so they can be used on straight sections or fittings. Tightening of the fastener pulls the plate flush with the side rail. The fasteners are snug and the joint is structurally and electrically superior. Even when hand-tightened, there is pressure on the fastener to hold it securely.

**Note:** Heavy Duty, Mid Span Splice Plates available upon request.

### 2. Zero Tangent Fittings

Tangent as referred to on cable tray fittings is the straight at the end of the curve to accommodate a flat splice plate. This wastes space in tightly packed areas, such as spreader rooms, where the heat of thousands of cables accumulate. Eliminating tangents allow more tray runs to distribute the heat. COPE ZERO TANGENT FITTINGS CAN SAVE UP TO 12" PER ROW OF TRAY.

**BONUS:** Inspection for proper installation of splice plate is visual. If the plate is bowed away from the rail, nuts must be tightened.

### 3. The Exclusive Auto Arc-Welded Assembly System

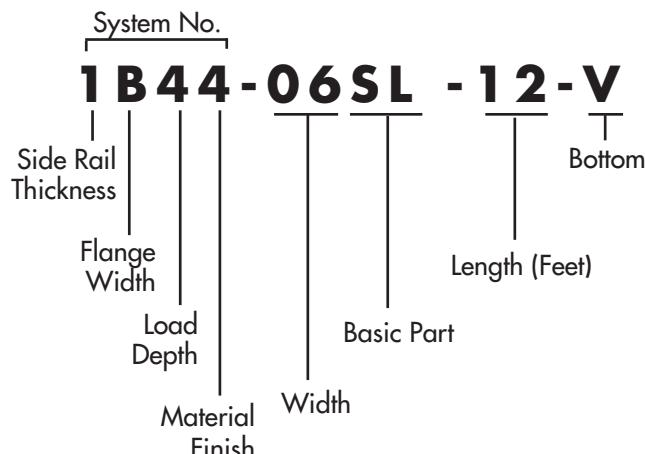

Corrugated bottoms on straight sections are assembled to the side rails using an automatic, self indexing MIGarc-welding system fusing a  $\frac{1}{2}$ " diameter zone. These welds are 700% larger and stronger than the common resistance (spot) weld in use today. Electrical properties of the assembly are unequalled; are well within the NEMA requirements due to the continuous electrical path. The mechanical strength of this welded assembly withstands the rigors of shipping, handling, installation and service. The size of the weld keeps the vertical axis of the side rail from sloping inward under load. The weld maintains the 90° angle between the side rail and bottom. This allows full use of the section properties. Spot welds do not permit this. Also, stresses on spot welds (barely  $\frac{1}{8}$ " in diameter) are so severe that breakage often occurs during shipping and installation. Cope Trof fittings are also assembled by MIG-arc-welding.

## USES OF COPE TROF

Generally, Cope Trof is optimum for ANY size cable. It offers continuous support with or without ventilation. The bottom design offers safety and security from unauthorized personnel. The vent holes may be bushed with a grommet for dropping out communication cables (Cat. DOG-2).

## PART NUMBERING SYSTEM:

## STRAIGHT LENGTH

**SYSTEM NUMBER (STRAIGHT SECTION ONLY)-**

The first four digits make up the system number which identifies the structural, dimensional, and material characteristics of the straight length. It is made up of the side rail digits indicating the side rail thickness and flange width, the load depth (inside, in inches), and material finish (galvanized, aluminum or coated).

**PREFIX NUMBER (FITTINGS ONLY)** – Fittings are ordered using the 3-digit prefix number given in the charts on the fitting pages. Fittings do not have stiffened upper flanges.

**WIDTH** – Identifies the inside width of the tray in inches.

## SYSTEM STRAIGHT SECTION ONLY

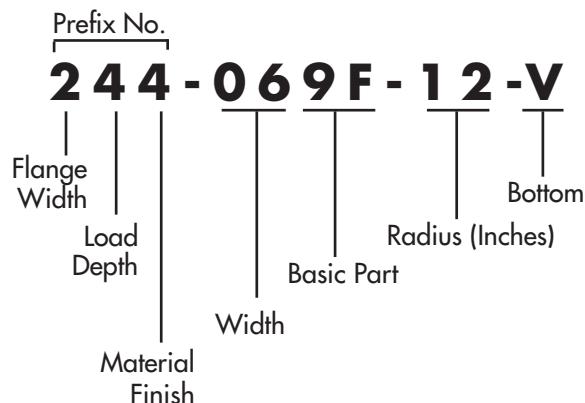

Thickness Steel (Ga.)	Flange Width	Load Depth			Material Finish
8 - 18 ga.	2 - $1\frac{3}{16}$ "	(21mm)	3"	(76mm)	2 - Mill-Galv.
6 - 16 ga.	4 - 1 $\frac{1}{4}$ "	(32mm)	4"	(102mm)	3 - HDGAF
4 - 14 ga.	5 - 1 $\frac{1}{2}$ "	(38mm)	5"	(127mm)	4 - Aluminum
2 - 12 ga.	7 - 2"	(51mm)	6"	(152mm)	U - 304SS
11 - 11 ga.					
<b>Thickness Alum (in.)</b>					
1 - Thinner	B - $1\frac{3}{16}$ "	(21mm)			
3 -	D - 1 $\frac{1}{4}$ "	(32mm)			
5 -**	E - 1 $\frac{1}{2}$ "	(38mm)			
7 -	G - 2"	(51mm)			
9 - Thicker					

\*\*Alum. extruded side rails are individually engineered to loads and spans.

**Slotted Rungs** provided on trays 6", 9", 12", 18", and 24" wide

**Solid Rungs** provided on trays 30" and 36" wide.

## FITTINGS

**BASIC PART NUMBER** – Identifies the straight length, fitting, or accessory.

**SECONDARY DIMENSION NUMBER** – Identifies the length of a straight section in feet, the radius of a fitting in inches, or the second width of a reducer in inches.

**BOTTOM TYPE**– Identifies the type bottom:  
 V (Ventilated) or S (Solid). Example: 1B44-06SL-12-V is a 4" load depth aluminum Trof with a  $1\frac{3}{16}$ " flange, 6" wide, straight length 12' long with a ventilated bottom.

# TROF CABLE TRAY SYSTEM

## CSA ORDERING INFORMATION

### COPE CSA STANDARDS C22-2 CABLE TROF VENTILATED & SOLID BOTTOM TYPE

#### HOW TO ORDER:

Explanation of Cope's Canadian Standards cable tray catalog numbers is described below. Use the system numbers given in selection charts for straight sections, or the fitting prefix numbers given in fitting tables. Be sure to follow system number or the fitting prefix with the item "description" number. The list below gives the CSA certified items carrying the CSA label.

#### SYSTEM NUMBER (STRAIGHT SECTION ONLY) -

The first four digits make up the system number which identifies the structural, dimensional, and material characteristics of the straight length. It is made up of the side rail digits indicating the side rail thickness and flange width, the load depth (inside, in inches), and material finish (galvanized, aluminum or coated).

**PREFIX NUMBER (FITTINGS ONLY) -** Fittings are ordered using the 3-digit prefix number given in the charts on the fitting pages. Fittings do not have stiffened upper flanges.

**WIDTH** - Identifies the inside width of the tray (in inches).

**BASIC PART NUMBER** - Identifies the straight length, fitting, or accessory.

**SECONDARY DIMENSION NUMBER** - Identifies the length of a straight section (in feet), the radius of a fitting (in inches), or the second width of a reducer (in inches).

**BOTTOM TYPE** - Identifies the type bottom:  
V (Ventilated) or S (Solid)

#### DESCRIPTION FITTINGS

CSA STRAIGHT LENGTH SYSTEM NUMBER			
Thickness Steel (Ga.)	Flange Width	Load Depth	Material Finish
8 - 18 ga.	2 - $13\frac{1}{16}$ "	(21mm)	4" 3 - HDGAF, CSA Class 1
6 - 16 ga.	4 - 1 $\frac{1}{4}$ "	(32mm)	4 - Aluminum Plain Finish
4 - 14 ga.	6"	(152mm)	
<b>Thickness Alum (in.)**</b>			
1 - thinner	*B - $1\frac{3}{16}$ "	(21mm)	
3 -	*D - 1 $\frac{1}{4}$ "	(32mm)	
5 - **	*E - 1 $\frac{1}{2}$ "	(38mm)	
7 -			
9 - thicker			
*Stiffened Upper Flange			

\*\*Alum. extruded side rails are individually engineered to loads and spans.

20A	6463	6" (152mm)	6 1/4" (159mm)	1 1/4" (32mm)	74 (50)	6m (1)	40.4mm	Yes
20C	4D63	6" (152mm)	6 1/4" (159mm)	1 1/4" (32mm)	149 (100)	6m	48.5mm	Yes

**Notes:** (1) Also recommended for 3 meter support spans

**Note:** indicates most common systems. Consult factory for lead times on other systems.

## CSA Loads

Identify the desired load designation needed for your project from the chart below. Both CSA Class and NEMA designations are listed by load capability and span. Then, select the CSA Certified Cope System from the table above. Where CSA C22.2 is not mandatory, you may want to consider one of the other Cope systems offered on the selection charts (page 142 thru 143).

## HISTORICAL LOAD/SPAN CLASS DESIGNATION

Load, kg/m (lb/ft)	Span, m (ft)				
	2.4 (8)	3.0 (10)	3.7 (12)	4.9 (16)	6.0 (20)
37 (25)	—	A	—	—	—
67 (45)	—	—	—	—	D
74 (50)	8A	—	12A	16A	20A
97 (65)	—	C	—	—	—
112 (75)	8B	—	12B	16B	E or 20B
149 (100)	8C	—	12C	16C	20C
179 (120)	—	D	—	—	—
299 (200)	—	E	—	—	—

**Note:** 8A/B/C, 12A/B/C, 16A/B/C, and 20A/B/C have been NEMA designations. A, B, C, D and E have been CSA designations

## Receiving, Installing, and Maintenance

The proper care and handling of cable Trofs by the receiver and installers is very important to insure a safe installation that will meet the intended service life. Cope has an installation guide available to assist the installers and those who will maintain the installed system.

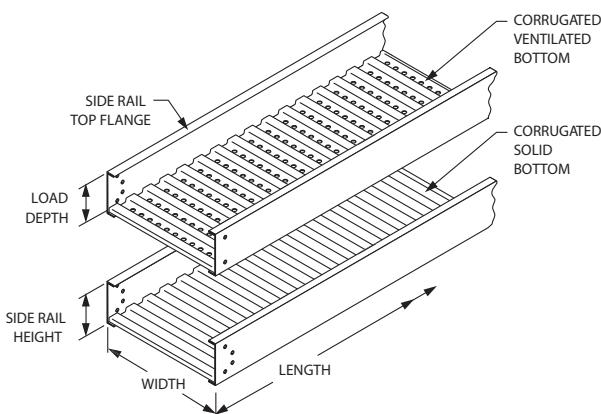

## Dimensions and Structural Properties: Cope CSA Systems

The performance of the Cope cable Trof systems certified by CSA is given above. Structural properties of straight sections, though not required to be listed, are given in the Cope NEMA selection charts, in English units. Dimensions of straight sections and certified fittings are furnished in English and metric units for use in layout and/or entry into computerized systems.

**Note:** For other CSA approved systems please contact the factory.

# TROF CABLE TRAY SYSTEM

## STRAIGHT LENGTH [SL]

**COPE TROF** is manufactured in 10' (CSA), 12', 20' (CSA) and 24' lengths; 6", 9", 12", 18", 24", 30" and 36" widths; and, 3", 4", 5", and 6" nominal load depths. A complete line of fittings and accessories are available.

Corrugated bottoms have 1" wide ribs on 2" centers. Ventilation holes in the valleys of the corrugations are  $1\frac{1}{16}$ " diameter on one inch (1") centers. Free passage of air through the openings results in a 68% open area. Corrugations give great lateral rigidity to the bottom transmitting the load to the side rails.

Solid Trof have the same corrugations but have no holes. Materials: Aluminum, Hot Dip-Mill galvanized (pre-galvanized) to ASTM A-924, Hot Dip Galvanized after Fabrication (HDGAF) to ASTM A-123.

Sufficient connectors are supplied to assemble straight sections and fittings for each order. Connectors for field cuts to be ordered separately.

## CATALOG NUMBER

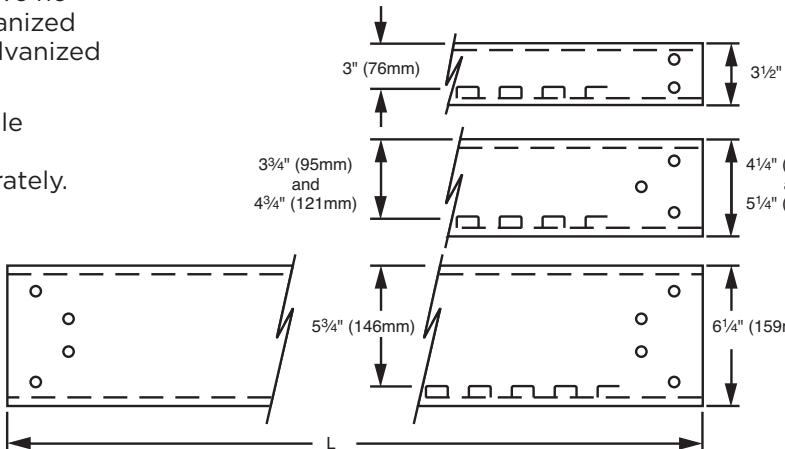

System	Width	Basic No.	Length	Bottom Type
See Pages 136 to 139	-06=6" (152mm)	SL	NEMA	-S (solid) -V (ventilated)
	-09=9" (229mm)		12' (3.7m)*	
	-12=12" (305mm)		24' (7.3m)*	
	-18=18" (457mm)		10' (3m)*	
	-24=24" (610mm)		20' (6m)*	
	-30=30" (762mm)		CSA	
	-36=36" (914mm)		-10' (3m) -20' (6m)	

\*10', 12' all NEMA Classes, 20', 24' NEMA Classes 16A, 16B, 16C, 20A, 20B, 20C.

*Example:* 1B44-06SL-12-V is a 4" load depth aluminum Trof with  $1\frac{3}{16}$ " flange, 6" wide, 12' long, with ventilated bottom.

\*Add suffix -V (vented) or -S (solid) to catalog number.

**Example:** 234-124F-12-V

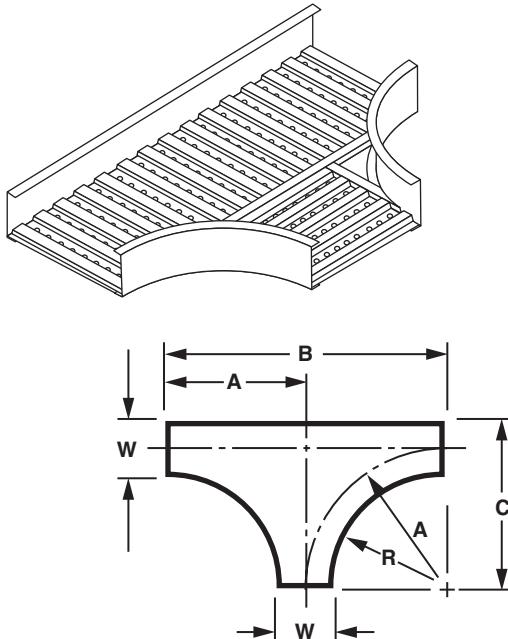

**Note:** When small or in-between angles are needed, use Cope's Adjustable Connectors.

\*Add suffix -V (vented) or -S (solid) to catalog number.

**Example:** 234-123F-12-V

*Example: 234-12SR-12-V*

### VERTICAL TEE - UP (OT)

## TYPICAL SPECIFICATIONS

By Specifying the NEMA class designation, you will use the simplest, clearest, and most complete method of specification available and automatically incorporate support span in feet, working (allowable) load in pounds per linear foot, a safety factor of 1.5, a concentrated load if present; and, all other design, manufacturing and test standards including electrical continuity.

### SPECIFICATION - ALUMINUM COPE TROF

Cable Trof type tray shall be manufactured by a company regularly engaged in the manufacture of metal cable trays and shall be a member of NEMA. Trays shall conform to NEMA Metal Cable Tray Standard Publication VE-1 (latest issue).

1. Cable Trof shall be NEMA Classification 12B of the widths indicated.
2. Material shall be aluminum alloy with side rails of 6063 and bottoms of 5052 alloy.
3. Finish shall be natural.
4. Inside load depth to be NEMA Standard 3".
5. Fittings shall be 12" radius for control cables and 24" radius for power cables. (This must be commensurate with the cable manufacturer's recommended minimum bending radius.)
6. All top level trays in stacks and single runs to have raised peaked aluminum ventilated covers with heavy duty hold down clamps every 3'-0".
7. Install expansion connectors, expansion guides, and hold down clamps per NEMA Standard VE-1.
8. Where slopes or horizontal bends of trays are not at the Standard NEMA angles use adjustable connectors. If the angle is too great for cable bending radius, use combinations of fitting and adjustable connectors.

All you need to add is inside depth, desired radius of fittings (to protect from cable damage), metal and finish. You can add accessory information pursuant to your project. Here is a typical specification for an outdoor tray system where the working (allowable) load has been determined to be approximately 75 pounds per foot on support spans of 12'-0"

9. Separate all cables of different voltages in the same tray using the manufacturer's standard barriers and barrier hold down system.
10. The cable Trof system will be used as an equipment grounding conductor.
11. To save space, fittings shall have no tangents. To facilitate field installation, use one pair of universal type connector plates for rigid joints.
12. Cable Trof shall be three (3) piece construction with corrugated bottoms having 1" wide ribs on 2" centers arc welded to 3½", high side rails. Ventilating holes, 1¼" diameter on 1" centers, shall be provided across valleys of the corrugations. Welds shall be MIG-arc type with approximately ½", diameter fused zone for rigidity to resist the rigors of shipping, installation, and service.
13. Trays shall be Cope Trof as manufactured by Atkore International.

# TROF CABLE TRAY SYSTEM

## ELECTRICAL GROUNDING CHART

Table 1 below provides the Minimum Cross Sectional area for two side rails. Using the Fitting Prefix Number (244), the proper value is determined by the Material (column 3), the Flange Width (column 1) and Load Depth (column 2). Locate the line containing the Load Depth (column 1) and follow it to the right to the appropriate Flange Width and Material.

Find that value in Table 2, follow it to the right to the Material column to determine the Maximum Ground Fault Amperage.

**TABLE 1**

Fitting Prefix Number			Min. X-Sect for 2 Rails (NEC Table 392.7B)			
			Aluminum		Steel	
			$1\frac{3}{16}$ " Flange	$1\frac{1}{4}$ " Flange	$1\frac{3}{16}$ " Flange	$1\frac{1}{4}$ " Flange
2 - $1\frac{3}{16}$ "	3"	2 - Mill Gal	0.60	-	0.40	-
4 - $1\frac{1}{4}$ "	4"	3 - HDGAF	0.60	0.60	0.40	0.70
	5"	4 - Alum.	0.60	1.00	0.70	0.70
	6"		0.60	1.00	0.70	1.00

For Example:

If the fitting prefix is 244, the Flange is  $1\frac{3}{16}$ ", the Load Depth is 4", and the Material is Aluminum. The Minimum Cross Sectional Area (X-Sect Area) is 0.60 sq.in. The Amperage is 1000.

**TABLE 2**

X-Sect Area	Maximum Ground Fault Amperage (in Amps)	
	Material	
	Aluminum	Steel
.40 sq in	-	100
.60 sq in	1000	-
.70 sq in	-	200
1.00 sq in	1200	400

**For Example:**

If the fitting prefix is 244, the Flange is  $1\frac{3}{16}$ ", the Load Depth is 4", and the Material is Aluminum. The Minimum Cross Sectional Area (X-Sect Area) is 0.60 sq.in. The Amperage is 1000.

# HARDWARE & COVERS

## CONNECTOR PLATES - LADDER, HAT, AND TROF

### TRAY CONNECTORS

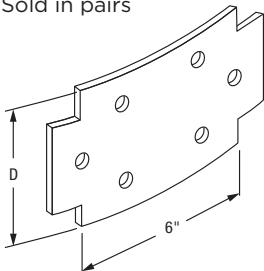

Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Basic No.
3"	6 (Mill Galv.)	2 (Mill Galv.)	-02RC
4"	7 (HDGAF)	3 (HDGAF)	-02CE
5"	8 (Alum.)	4 (Alum.)	-02CV
6"	T (304SS)	U (304SS)	-02CH -02CA

EXAMPLE: 38 -02RC for 3" load depth, aluminum, universal curvilinear connector.

NOTE: Hole patterns match corresponding tray. Three-hole pattern illustrated.

### UNIVERSAL CURVILINEAR CONNECTOR [RC]

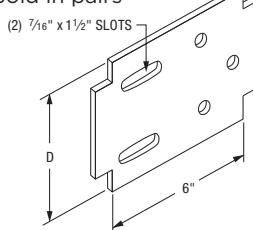

NOTE: Sold in pairs

11 Gage Steel, 0.125" Aluminum  
3/8"-16 spline bolts & flange nuts furnished.

### EXPANSION CONNECTOR [CE]

NOTE: Sold in pairs

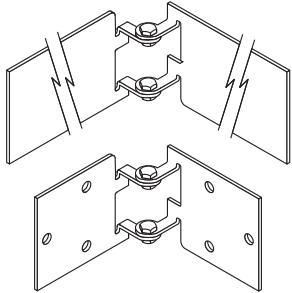

11 Gage Steel, 0.125" Aluminum  
3/8"-16 cap screws & Nylok nuts furnished and  
3/8"-16 spline bolts & flange nuts furnished.

NOTE: Bonding Jumpers are required and are sold separately.

### HORIZONTAL ADJUSTABLE CONNECTOR [CH]

NOTE: Sold in pairs - inner & outer

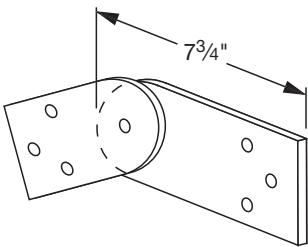

11 Gage Steel, 0.125" Aluminum  
3/8"-16 spline bolts & flange nuts furnished.

NOTE: Bonding Jumpers are required and are sold separately.

### VERTICAL ADJUSTABLE CONNECTOR [CV]

NOTE: Sold in pairs

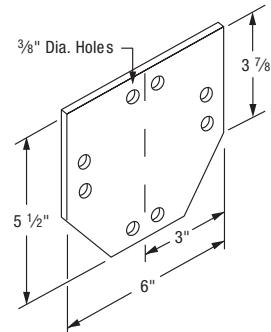

11 Gage Steel, 0.125" Aluminum  
3/8"-16 spline bolts & flange nuts furnished.

NOTE: Bonding Jumpers are required and are sold separately.

### MID-SPAN SPLICING PLATE [RC]

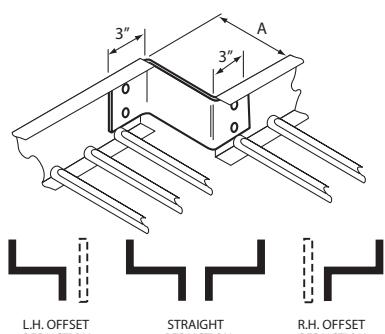

Catalog Number: 58-02RC-MID

3/8" - Aluminum  
For use with 7D58 and 7G58 Systems.

### REDUCING CONNECTOR

NOTE: Not sold in pairs

12 Gage Steel, 0.125" Aluminum

For offset reductions - use 1 of above with standard connector plate.

For straight reductions - use 2 (of 1/2 reduction dim.).

3/8"-16 spline bolts and flange nuts furnished.

EXAMPLE: 38-03CO for 3" load depth, aluminum, 3" Reducer Connector.

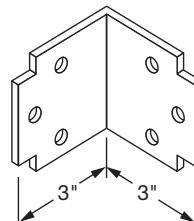

Typical Use: 9" to 6", or use 2 for 12" to 6", etc.

### Catalog Number

Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Basic Number	"A" Dimension
3"	6 (Mill Galv.)	2 (Mill Galv.)	-30CO	30" (762mm)

5"	8 (Alum.)	4 (Alum.)	-24CO	24" (610mm)
6"	T (304SS)	U (304SS)	-21CO	21" (533mm)
			-18CO	18" (457mm)
			-15CO	15" (381mm)
			-13CO	13 1/2" (343mm)
			-12CO	12" (305mm)
			-10CO	10 1/2" (267mm)
			-09CO	9" (229mm)
			-07CO	7 1/2" (191mm)
			-06CO	6" (152mm)
			-04CO	4 1/2" (114mm)
			-03CO	3" (76mm)
			-01CO	1 1/2" (38mm)

### 90° ANGLE CONNECTOR [CA]

NOTE: Sold in pairs

11 Gage Steel, 0.125" Aluminum  
3/8"-16 spline bolts & flange nuts furnished.

## HARDWARE - LADDER, HAT, AND TROF

**MATERIAL/FINISH**

Electrogalvanized finish standard. Other finishes available; consult factory.

\*Use following suffix when applicable - use only where indicated.

**NO SUFFIX** Electrogalvanized carbon steel only

**-SS** 302/304 Stainless Steel

**-S1** 316 Stainless Steel (check factory for availability)

**Example:** PS 6024 3/8" x 1 1/2" SS, 3/8" x 1 1/2" hex head bolt, 304 stainless steel

**CONNECTOR HARDWARE**

(Case-hardened steel electrogalvanized)

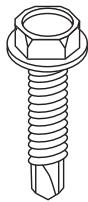

**Part No. 5003-1**  
3/8"-16 x 1" spline bolt

**Part No. 5009-1**  
3/8"-16 hex-flanged nut with  
serrated washer face.

**COVER SCREW [EM]**

Part No. EM-CC (electrogalv. steel)  
Part No. EM-CC-SS (stainless steel)

No. 10 x 5/8" long, self drilling-self tapping  
hex head plated steel screw.

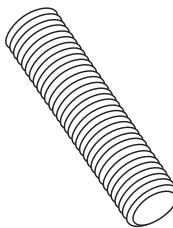

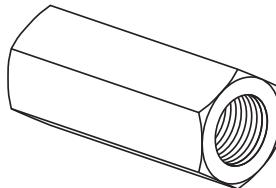

Suggested spacing:

Indoor: 8 per 12';  
Outdoor: 10 per 12'

**CONTINUOUS THREADED ROD [PS 146]**

Cat. No.	Size (Diameter x Length)
PS 146*	1/4" x 10"
PS 146*	5/8" x 10"
PS 146*	1/2" x 10"
PS 146*	5/8" x 10"
PS 146*	3/4" x 10"

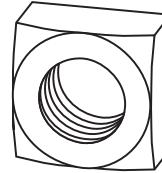

(Hot Dip Galvanized not available)

**ROD COUPLER [PS 135]****HEX NUTS [PS 83]**

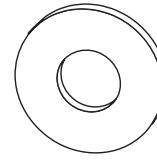

Cat. No.	Size
PS 83*	1/4"

# HARDWARE & COVERS

## COVERS - LADDER, HAT, AND TROF

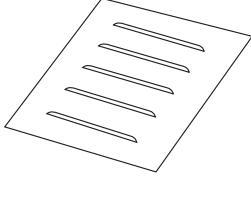

For straight sections shown. Standard fitting covers are flat solid type (NF). Aluminum covers are fabricated from 0.040" aluminum AA-3150-H14; steel covers are fabricated from 20 gage ASTM A-653-G90 CQ, mill-galvanized steel.

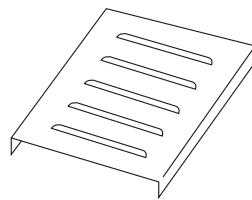

NF – Flat Solid

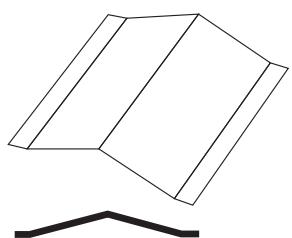

FS – Flat Solid  
w/  $\frac{3}{8}$ " Flange

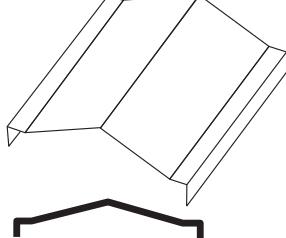

NL – Flat Louvered

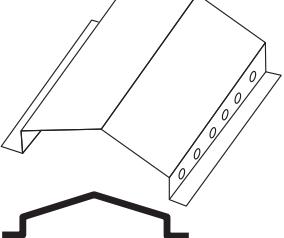

FL – Louvered  
w/  $\frac{3}{8}$ " Flange

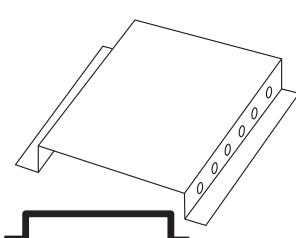

PS – Peaked Solid  
(suffix height)

PF – Peaked Flanged Solid  
w/  $\frac{3}{8}$ " Flange  
(suffix height)

PH – Peaked Hat Solid  
PV – Peaked Hat Vent  
(suffix height)

HS – Hat Solid  
HV – Hat Vent  
(suffix height)

NOTE: Use EM-CC Cover Screws (see pg. 57) to attach PH, PV, HS & HV covers.

### Hot dip covers - straights only 6'

#### Cover Catalog Number – Straight Sections

Type	Flange (LADDER ONLY)	Finish (LADDER)	Finish (HAT & TROF)	Basic No. (Width)	Length	Height*
HS, HV,	2 - $1\frac{3}{16}$ "	6 - Mill Galv.	2 - Mill Galv.	-06SL = 6" (152mm)	-06'	2"
FL, FS,	4 - $1\frac{1}{4}$ "	7 - HDGAF	3 - HDGAF	-09SL = 9" (229mm)	-10'	
NF, NL,	5 - $1\frac{1}{2}$ "	8 - Alum.	4 - Alum.	-12SL = 12" (305mm)	-12'	
PS, PF,	6 - $1\frac{3}{4}$ "	T - 304SS	U - 304SS	-18SL = 18" (457mm)		
PH, PV	7 - 2"			-24SL = 24" (610mm)		
				-30SL = 30" (762mm)		
				-36SL = 36" (914mm)		

\*peak and hat only, 2" height standard. Consult factory for other heights.

Example: NL46-09SL-10 is a flat louvered mill-galv. steel cover for a 9" wide mill galvanized ladder 10' long with a 1 1/4" flange.

#### Cover Catalog Number – Fittings

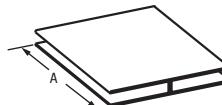

Type	Flange (LADDER ONLY)	Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Width/ Basic No.	Radius
NF	2 - $1\frac{3}{16}$ "	3"	6 - Mill Galv.	2 - Mill Galv.	-06 XX **	12"
FS	4 - $1\frac{1}{4}$ "	4"	7 - HDGAF	3 - HDGAF	-09 XX **	24"
		5"	8 - Alum.*	4 - Alum.*	-12 XX **	36"
		6"	T - 304SS	U - 304SS	-18 XX **	
					-24 XX **	
					-30 XX **	
					-36 XX **	

\* Load depth for outside riser or vertical tee only.

\*\* XX from fitting selection page 32

Example: NF26-369F-24 is a mill galvanized non-flanged solid cover for a 36" wide horizontal 90° elbow with a 24" radius.

### JOINT PLATE

Joint plate is black PVC and is offered in 10' lengths to be field cut to desired length, or in pre-cut lengths for specified covers (e.g., PJ-06 is a joint plate for 6" wide tray).

#### Joint Plate (LADDER)

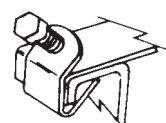

Part No.	Tray Size	Tray Width	Flange Type
JP-06	6" (152mm)	JP-06 = 6" (152mm)	
JP-09	9" (229mm)	JP-09 = 9" (229mm)	-2 = $1\frac{3}{16}$ " Flange
JP-12	12" (305mm)	JP-12 = 12" (305mm)	
JP-18	18" (457mm)	JP-18 = 18" (457mm)	-4 = $1\frac{1}{4}$ " Flange
JP-24	24" (610mm)	JP-24 = 24" (610mm)	
JP-30	30" (762mm)	JP-30 = 30" (762mm)	-7 = 2" Flange
JP-36	36" (914mm)	JP-36 = 36" (914mm)	
JP-120	10' for field cut		

Example: JP-06-2 is a joint plate for 6" wide tray with a  $1\frac{3}{16}$ " flange.

### STAINLESS STEEL COVER CLIP [CCS-SS]

$\frac{1}{4}$ " - 28 stainless steel cone point machine screw. Use with any width tray and cover. Not sold in pairs.

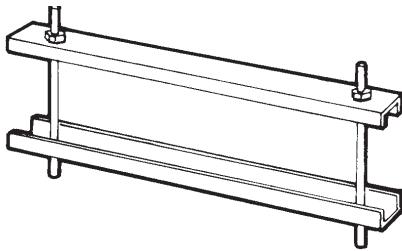

Indoor use only. Suggest spacing 6' max.

## COVER ACCESSORIES - LADDER, HAT, AND TROF

### DOUBLE CLAMP CONNECTOR [(W) DC]

For all covers except hat & peak type.  
Furnished with:  
(2)  $\frac{1}{4}$ "-20 all-thread rods (4) hex nuts,  
flat washers and  
lock washers.

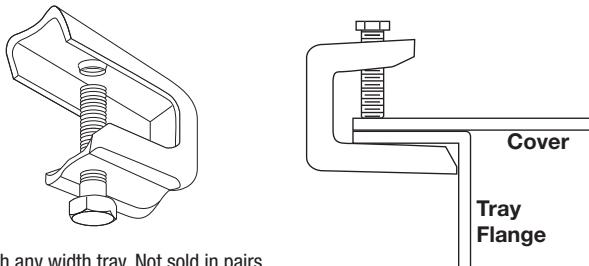

Flange (LADDER ONLY)	Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Width	Type
2= $\frac{1}{16}$ "	3"	6=Mill Galv.	2=Mill Galv.	-06	DC
4= $\frac{1}{4}$ "	4"	7=HDGAF	3=HDGAF	-09	
5= $\frac{1}{2}$ "	5"	8=Alum.	4=Alum.	-12	
6= $\frac{3}{4}$ "	6"	T=304SS	U=304SS	-18	
7=2"				-24	
				-30	
				-36	

Suggested spacing:  
Indoor: 2 per 12'  
Outdoor: 3 per 12'  
High Wind: 5 per 12'

Example: 238-12DC  
for 3" load depth,  
 $\frac{13}{16}$ " flange, aluminum, Double Clamp  
Connector for Ladder Tray

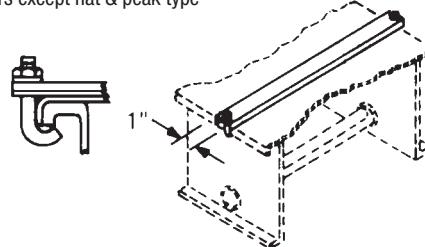

### ELECTRO-GALV. STEEL COVER CLIP [PS 135X]

Use with any width tray. Not sold in pairs.  
Indoor use only. Suggest spacing 6' max.

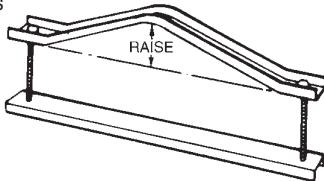

### COVER CONNECTOR [CC]

NOTE: For all covers except hat & peak type

### PEAK COVER CONNECTOR [PC]

NOTE: For PS & PF Covers

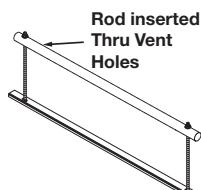

Flange (LADDER ONLY)	Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Width	Type	Raise (in)*
2= $\frac{1}{16}$ "	3"	6=Mill Galv.	2=Mill Galv.	-06	PC	-2
4= $\frac{1}{4}$ "	4"	7=HDGAF	3=HDGAF	-09		
5= $\frac{1}{2}$ "	5"	8=Alum.	4=Alum.	-12		
6= $\frac{3}{4}$ "	6"	T=304SS	U=304SS	-18		
7=2"				-24		
				-30		
				-36		

238-12PC-2 for 3" load depth,  $\frac{13}{16}$ " flange, aluminum, 12" wide, Peak Cover Connector with 2" peak for Ladder Tray

\*2" standard raise. Consult factory for other peak heights.

### PEAK VENT COVER CONNECTOR [VC]

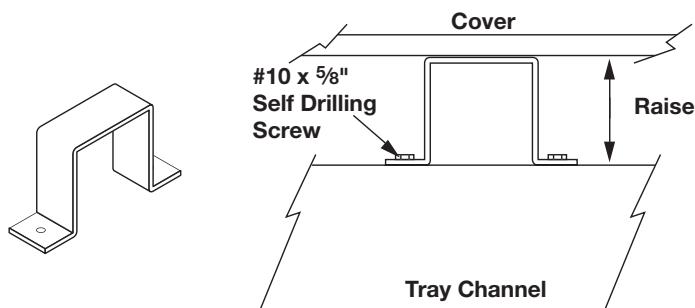

NOTE: For PV Covers

Flange (LADDER ONLY)	Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Width	Type
2= $\frac{1}{16}$ "	3"	6=Mill Galv.	2=Mill Galv.	-06	VC
4= $\frac{1}{4}$ "	4"	7=HDGAF	3=HDGAF	-09	
5= $\frac{1}{2}$ "	5"	8=Alum.	4=Alum.	-12	
6= $\frac{3}{4}$ "	6"	T=304SS	U=304SS	-18	
7=2"				-24	
				-30	
				-36	

Example: 238-12VC is for 3" load depth,  $\frac{13}{16}$ " flange, aluminum, 12" wide, Peak Vented Cover Connector for Ladder Tray

### ELEVATED COVER CONNECTORS [EM-CC]

Finish (LADDER)	Finish (HAT & TROF)	Type	Height*	Includes:
6=Mill Galv.	2=Mill Galv.	EM-CC	- Raise* (in.)	(3) #10 x $\frac{5}{8}$ " Self drilling screws.
7=HDGAF	3=HDGAF			Suggested spacing: Indoor: 3/Side (6 tot.) per 12'
8=Alum.	4=Alum.			
T=304SS	U=304SS			

\*1", 2" or 3" standard.

Example: 7-EM-CC-2 for hot dipped galvanized, Elevated Cover Connector with a 2" raise for Ladder Tray

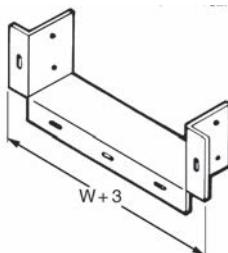

# HARDWARE & COVERS

## ACCESSORIES - LADDER, HAT, AND TROF

### BOX CONNECTOR [CB]

14 Gage Steel, .080" Aluminum.

NOTE:  $\frac{1}{4}$ "-20 carriage bolts, flat washers, hex nuts furnished

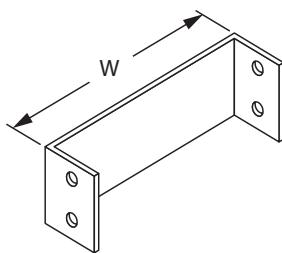

Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Width
3"	6 (Mill Galv.)	2 (Mill Galv.)	-06CB = 6" (152mm)
4"	7 (HDGAF)	3 (HDGAF)	-09CB = 9" (229mm)
5"	8 (Alum.)	4 (Alum.)	-12CB = 12" (305mm)
6"	T (304SS)	U (304SS)	-18CB = 18" (457mm)
			-24CB = 24" (610mm)
			-30CB = 30" (762mm)
			-36CB = 36" (914mm)

Example: 38-12CB for 3" load depth, aluminum, 12" wide, Box Connector.

### BLIND END [BE]

22 Gage Steel, .040" Aluminum

NOTE:  $\frac{3}{8}$ "-16 spline bolts and flange nuts furnished.

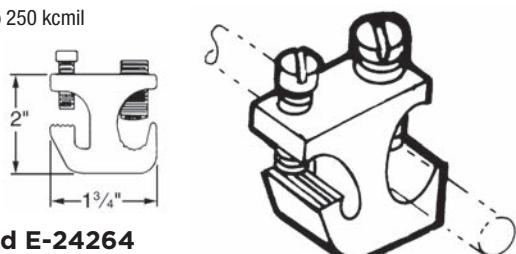

Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Width
3"	6 (Mill Galv.)	2 (Mill Galv.)	-06BE = 6" (152mm)
4"	7 (HDGAF)	3 (HDGAF)	-09BE = 9" (229mm)
5"	8 (Alum.)	4 (Alum.)	-12BE = 12" (305mm)
6"	T (304SS)	U (304SS)	-18BE = 18" (457mm)
			-24BE = 24" (610mm)
			-30BE = 30" (762mm)
			-36BE = 36" (914mm)

Example: 38-12CB for 3" load depth, aluminum, 12" wide, Box Connector.

### CABLE TRAY GROUND CLAMP [9156]

Extruded Alum. with Electrogalvanized Hex Head Screws

Capacity: #6 AWG to 250 kcmil

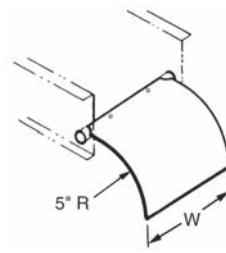

UL Listed E-24264

Certified File No. LR 9795

### DROP OUT [DO]

14 Gage Steel, .080" Aluminum.

NOTE: (2) #10 x  $\frac{5}{8}$ " self tapping screws furnished.

Finish (LADDER)	Finish (HAT & TROF)	Width
6 (Mill Galv.)	2 (Mill Galv.)	-06DO = 6" (152mm)
7 (HDGAF)	3 (HDGAF)	-09DO = 9" (229mm)
8 (Alum.)	4 (Alum.)	-12DO = 12" (305mm)
T (304SS)	U (304SS)	-18DO = 18" (457mm)
		-24DO = 24" (610mm)
		-30DO = 30" (762mm)
		-36DO = 36" (914mm)

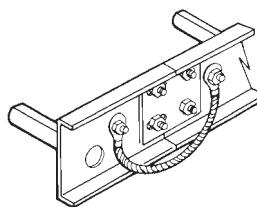

Example: 8-12DO for aluminum, 12" wide, Drop Out for Ladder Tray

### BONDING JUMPER [CBJ]

NOTE: No hardware supplied

For hardware kit add -HDW:

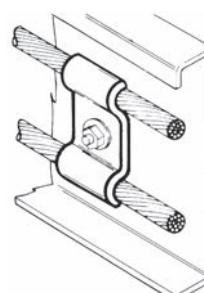

Ex: CBJ-C-HDW includes  
2ea CBJ-C  
4ea 5003-1  
4ea 5009-1

Catalog No.	Dimensional Data	Amperes as Equipment Ground
CBJ-C	AWG 1/0 copper wire 15 1/2" long overall	800 amperes
CBJ-4C	AWG 4/0 copper wire 15 1/2" long overall	1,600 amperes
CBJ-250C	250 MCM copper wire 15 1/2" long overall	2,000 amperes

Example: 38-12CB for 3" load depth, aluminum, 12" wide, Box Connector.

### GROUND CABLE RETAINER CLAMP

Catalog No.	Capacity	Metal & Finish	Dimensions
9056-EP	1/0 2/0 3/0	Electro-Galv. Steel	1" w x 2" long
9057-EP	4/0 250 MCM	Electro-Galv. Steel	1" w x 2 3/8" long
9056-SS	1/0 2/0 3/0	Stainless Steel	1" w x 2" long
9057-SS	4/0 250 MCM	Stainless Steel	1" w x 2 3/8" long

## ACCESSORIES - LADDER, HAT, AND TROF

## CONDUIT CLAMP BRACKET

Catalog No.	Size-Rigid	Size-EMT

## WALL PENETRATING SLEEVE ASSEMBLY

## Part No. SS89042(W)\*

W = Tray Width

\*=Fitting 3-Digit Prefix

NOTE: Standard penetration sleeves are manufactured from mill galvanized steel. Aluminum sleeves are available upon request.

# HARDWARE & COVERS

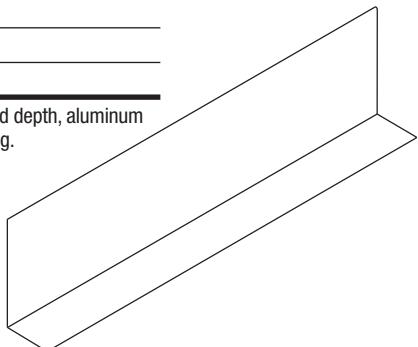

## BARRIER STRIPS - LADDER, HAT, AND TROF

### UNIVERSAL ALUMINUM BARRIER STRIP - STRAIGHT SECTION [SB]

Load Depth	Finish	Basic No. 12' Length
3"	A (Alum.)	-01SB-12
4"		
5"		
6"		

Example: 3A-01SB-12 for 3" load depth, aluminum straight barrier, 12' long.

Furnished with 8 self tapping screws.

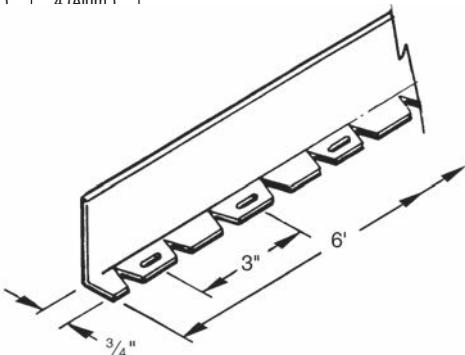

### BARRIER STRIP - HORIZONTAL FITTING [FB]

Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Basic No. 12' Length
3"	6 (Mill Galv.)	2 (Mill Galv.)	-01FB-06
4"	7 (HDGAF)	3 (HDGAF)	
5"	8 (Alum.)	4 (Alum.)	
6"	T (304S)		

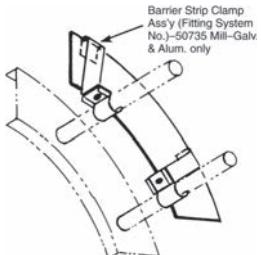

Example: 38-01FB-06 for fitting barrier, 6'

Furnished with 4 barrier strip clamps and necessary hardware.

### BARRIER STRIP VERTICAL ELBOW OUTSIDE [OB] & INSIDE [IB] (OB SHOWN)

Furnished with sufficient clamp assemblies for installation. Additional clamp assemblies may be ordered separately.

Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Bend (deg.)	Basic No.	Radius
3"	6 (Mill Galv.)	2 (Mill Galv.)	90	OB - Outside	12" (305mm)
4"	7 (HDGAF)	3 (HDGAF)	60	IB - Inside	24" (610mm)
5"	8 (Alum.)	4 (Alum.)	45		36" (914mm)
6"	T (304SS)	U (304SS)	30		

Example: 38-900B-12 for 3" load depth, aluminum 90° outside vertical barrier with 12" radius.

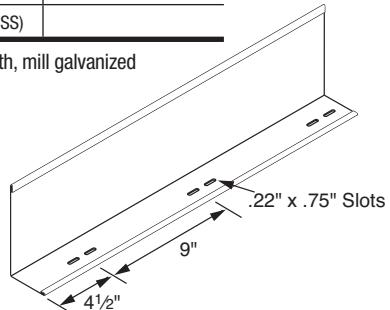

### BARRIER STRIP - STRAIGHT SECTION [SB]

Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Basic No. 12' Length
3"	6 (Mill Galv.)	2 (Mill Galv.)	-01SB-12
4"	7 (HDGAF)	3 (HDGAF)	
5"	8 (Alum.)	4 (Alum.)	
6"	T (304SS)	U (304SS)	

Example: 46-01SB-12 for 4" load depth, mill galvanized straight barrier, 12' long.

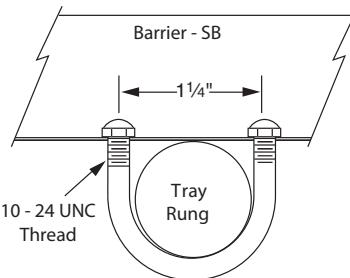

Furnished with 4 barrier strip clamps and necessary hardware. (SB-HDW)

\* Long lead time item - See Universal aluminum barrier strip to the left

### BARRIER STRIP CLAMP [SB-HDW]

Includes: (1) U-Bolt 707981505  
(2) Acorn Nuts 707671500

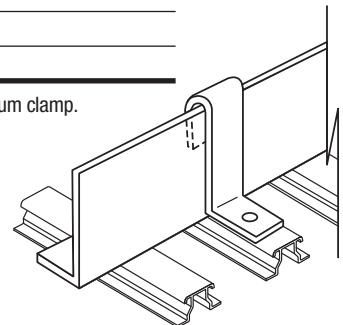

### BARRIER STRIP CLAMP (OPTIONAL) [50172]

Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Basic No.
3"	6 (Mill Galv.)	2 (Mill Galv.)	-01FB-06
4"	7 (HDGAF)	3 (HDGAF)	
5"	8 (Alum.)	4 (Alum.)	
6"	T (304SS)	U (304SS)	

Example: 34-5072 for 3" load depth, aluminum clamp.

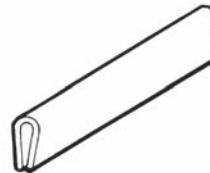

No. 10 bolt, nut, washer and lock washer furnished.

### NYLON BARRIER SPLICING & PROTECTOR [BSP-L]

Prefix	Length
BSP	-5 (5" Splice)
	-144 (144" Protector)
	-1200 (100' Roll)

Example: BSP-1200 for 100' roll

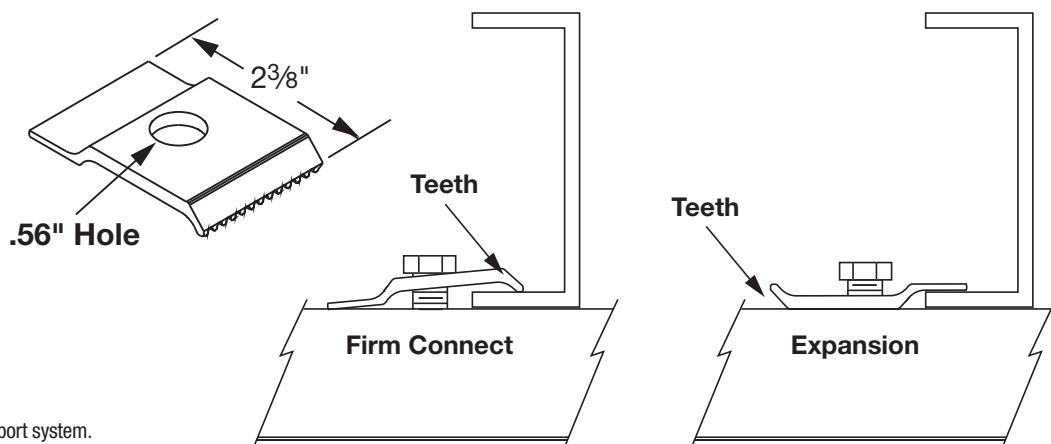

## ACCESSORIES - LADDER, HAT, AND TROF

## COMBINATION HOLD-DOWN CLAMP &amp; EXPANSION GUIDE [9131] (LADDER ONLY)

Catalog No.	Material
9131	Cast Zinc
9131L	316 Type Stainless Steel
9131A	Aluminum

Catalog No. 9131-HDW  
 (Complete Hardware Kit)  
 Hardware Kit List:  
 (2) Hold-Down Clamps  
 (2)  $\frac{1}{2}$ " - 13 x  $1\frac{1}{2}$ " Cap Screws  
 (2)  $\frac{1}{2}$ " Flat Washer  
 (2) Clamping Nut (Strut Nut)

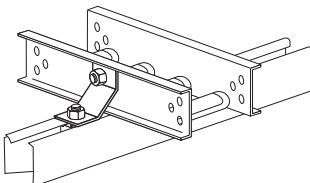

Hardware purchased separately to suit support system.

## HOLD-DOWN [9132]

NOTE: For seismic applications or other bolted connections is preferred.

Catalog No.	Material
9132	Mill Galvanized
9133	Stainless Steel

Hardware purchased separately to suit support system.

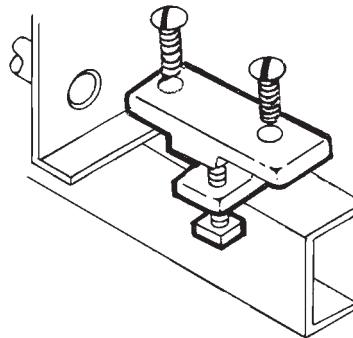

## COMBINATION HOLD-DOWN / EXPANSION GUIDE [9053] (LADDER ONLY)

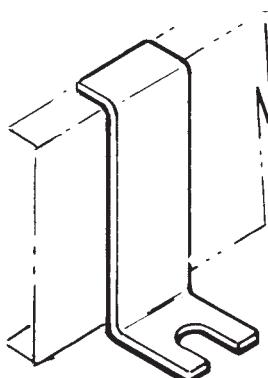

Universal Guide: for either side of ladder. Use when tray is mounted on I-beams or channels. No drilling required.

NOTE: Use set screws for firm hold down.

NOTE: Electroplated set screws included

## HOLD-DOWN CLAMP &amp; EXPANSION GUIDE

Load Depth.	Basic No.
3	-9039 (Aluminum)
4	-9040 (Electrogalv.Steel)
5	-9041 (HDGAF)
6	-9042 (316SS)

Example: 3-9039-EX for 3" load depth, expansion guide.

Complete Kit add "-HDW" to Part Number above.  
 Hardware Kit List:  
 (2) Hold-Down Clamps  
 (2)  $\frac{1}{2}$ " - 13 x  $1\frac{1}{2}$ " Cap Screws  
 (2)  $\frac{1}{2}$ " Flat Washer  
 (2) Clamping Nut (Strut Nut)

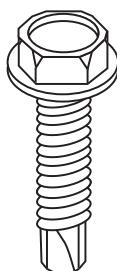

Hardware purchased separately to suit support system.

## COVER SCREW

Part No. EM-CC (electrogalv. steel)  
 Part No. EM-CC-SS (stainless steel)

No. 10 x  $\frac{5}{8}$ " long, self drilling-self tapping hex head plated steel screw.

Suggested spacing:  
 Indoor: 8 per 12';  
 Outdoor: 10 per 12'

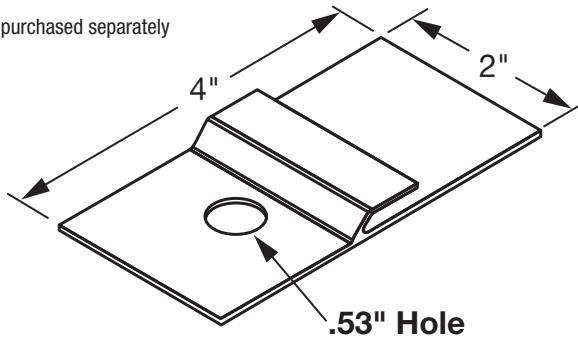

## ISOLATION PAD [9131-IP]

The Isolation pad provides protection from galvanic corrosion when Aluminum tray is mounted on steel supports.

NOTE: For use with the 9131A shown above.

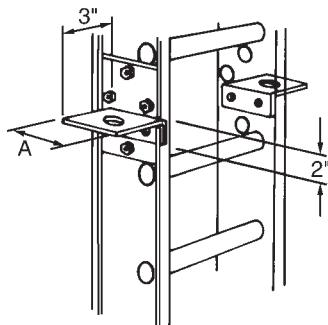

Hardware purchased separately

# HARDWARE & COVERS

## SUPPORTS - LADDER, HAT, AND TROF

### VERTICAL SUPPORTS

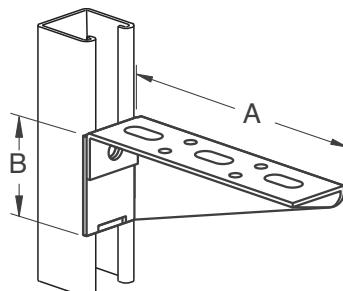

Catalog No.	For Use With
9043-37	4 1/4" Overall Height Side Members
9043	5 1/4" Overall Height Side Members
9025-98	6 1/4" & 7 1/4" Overall Height Side Members

Ladder Supports can be bolted anywhere along the straight runs. They can be bolted directly onto the coupler plates at splices of straight runs and riser fittings, or they can be bolted at any place in the run by field-drilling side rails. Ladder supports are used with either  $\frac{3}{8}$ " or  $\frac{1}{2}$ " hanger rods.

Finish is electrogalvanized.

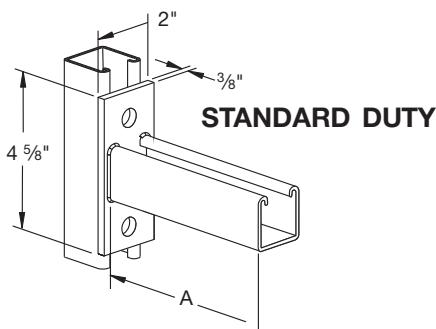

### GUSSET-TYPE SUPPORTS

For use with all types of Cope Ladder and Trof systems.  
Finish is electro-galvanized.  
Order hardware separately.

Catalog No.	Tray Width	Dim. A	Dim. B	Uniform-Load Rating*
PS 838R-6	-	6"	1 15/16"	275 lbs.
PS 838R-8	-	8"	2 7/16"	275 lbs.
PS 838R-10	-	10"	2 15/16"	275 lbs.
PS 838R-12	6"	12"	3 7/16"	275 lbs.
PS 838R-16	9"	16"	4 7/16"	275 lbs.
PS 838R-18	12"	18"	4 15/16"	275 lbs.
PS 838R-24	18"	24"	6 7/16"	275 lbs.
PS 838R-30	24"	30"	7 15/16"	275 lbs.

### CHANNEL-TYPE SUPPORTS

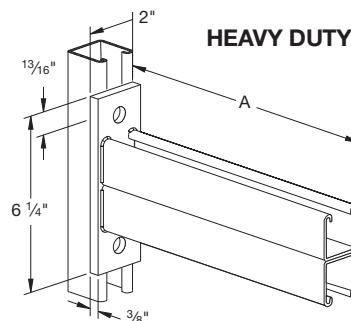

For use with all types of Cope Ladder and Trof systems.  
Finish is electro-galvanized.  
Order hardware separately.

Standard Duty for Lighter Loads

Catalog No.	Ladder Width	Dimension "A"	Uniform-Load Rating*
PS 651-6	-	6"	1,200 lbs.
PS 651-12	6"	12"	600 lbs.
PS 651-15	9"	15"	480 lbs.
PS 651-18	12"	18"	400 lbs.
PS 651-24	18"	24"	300 lbs.
PS 651-30	24"	30"	240 lbs.
PS 651-36	30"	36"	-

\* Mounted on 12 Ga. Channel.

### DOUBLE CHANNEL-TYPE SUPPORTS

For use with all types of Cope Ladder and Trof systems.  
Finish is electro-galvanized.  
Order hardware separately.

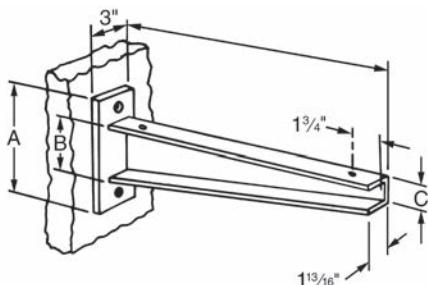

Heavy Duty for Heavier Loads

Catalog No.	Ladder Width	Dimension "A"	Uniform-Load Rating*
PS 809-12	6"	12"	2,000 lbs.
PS 809-15	9"	15"	1,600 lbs.
PS 809-18	12"	18"	1,330 lbs.
PS 809-24	18"	24"	1,000 lbs.
PS 809-30	24"	30"	800 lbs.
PS 809-36	30"	36"	660 lbs.
PS 809-42	36"	42"	570 lbs.

\* Mounted on 12 Ga. Channel.

## SUPPORT BRACKETS &amp; TRAY HANGERS - LADDER, HAT, AND TROF

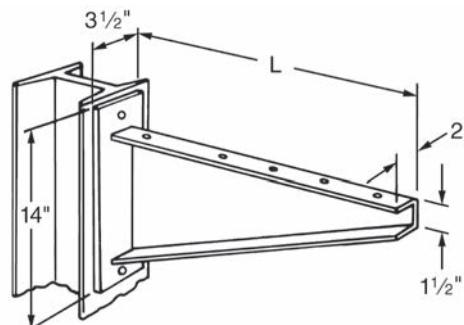

## WALL SUPPORT BRACKETS

Catalog No.	Ladder Width	Length L	A	B	C	End-Load Rating*
9037-12	6"	12 1/4"	10"	6"	2"	2000 lbs.
9037-18	12"	18 1/4"	11"	7"	2 1/2"	2000 lbs.
9037-24	18"	24 1/4"	11"	7"	2 1/2"	1600 lbs.
9037-30	24"	30 1/4"	12"	8"	4"	1300 lbs.
9037-36	30"	36 1/4"	12"	8"	4"	1100 lbs.
9037-42	36"	42 1/4"	12"	8"	4"	900 lbs.

\*Uniform load rating is normally twice the end-load rating.  
Finish is hot-dip galvanized after fabrication.  
Order hardware separately

## STRUCTURAL SUPPORT BRACKET

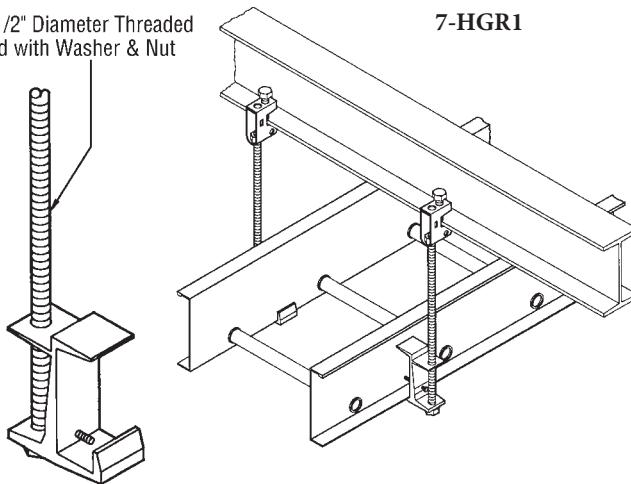

Catalog No.	Ladder Width	Length L	End-Load Rating*
9036-31	24"	31 1/4"	2000 lbs.
9036-37	30"	37 1/4"	1800 lbs.
9036-45	36"	45 1/4"	1500 lbs.

\*Uniform load rating is normally twice the end-load rating.  
For use with Cope Ladder 24" or wider. May be welded or bolted to building steel.  
Finish is hot-dip galvanized after fabrication.  
Order hardware separately.

## TRAY HANGER

\*Uniform load rating is normally twice the end-load rating.  
Finish is hot-dip galvanized after fabrication.  
Order hardware separately

Use 1/2" Diameter Threaded Rod with Washer & Nut

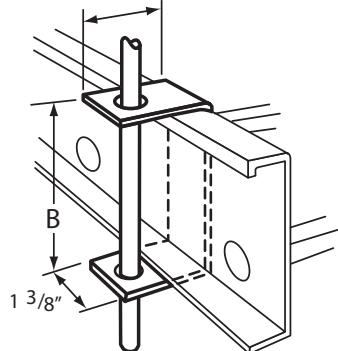

7-HGR1

## SINGLE LADDER HANGERS

Cope Ladder Hangers are sized according to the side rail height and flange dimensions of various Cope ladders. The  $1\frac{1}{32}$ " holes accommodate either  $\frac{3}{8}$ " or  $\frac{1}{2}$ " diameter threaded rod.

Order hardware separately.  
Finish is Mill-Galv., HDGAF, or Aluminum.

Basic No.	M.G.	Finish H.D.G.	Alum.	Side Rail	"A" Dim.	"B" Dim.
9038-	236	237	238	4 1/4 x 1 13/16	2"	4 5/16

9038-	466	467	468	7 1/4 x 1 1/4	2 1/16	7 5/16

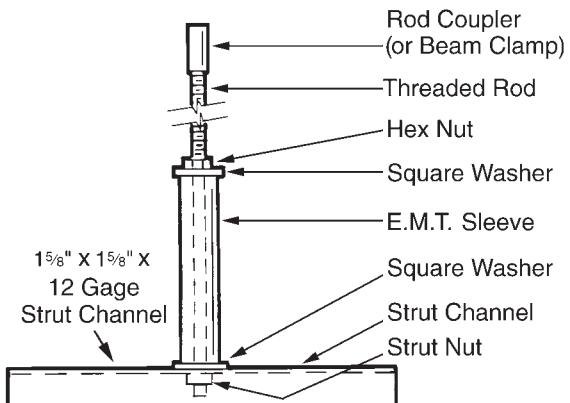

# HARDWARE & COVERS

## TRAY HANGERS & SUPPORTS - LADDER, HAT, AND TROF

### SINGLE ROD HANGER SUPPORT

Assy. Type	Channel Length*	Channel Finish**	Rod Diameter	Rod Length	Beam Clamp
P200	14" (356mm)	GV (Pre-Galv)	38=3/8" (9.53mm)	000 - No Rod	A - Bridgeport
	17" (432mm)		12=1/2" (12.7mm)	036 - 36" (914mm)	B - P2622
	20" (508mm)	HG (Hot Dipped Galv)		072 - 72" (1828mm)	O - No Clamp
	26" (661mm)			120 - 120" (3048mm)	R - Rod Coupler
	32" (813mm)			144 - 144" (3658mm)	S - Special
	38" (966mm)				
	44" (1118mm)				

Example: P20020GV12036B is a Single 20" pre-galvanized channel with 1/2" x 36" drop rod and P2622 clamp.

Note:

\* Order channel length 8" longer than tray width.

For example, 44" channel for 36" tray.

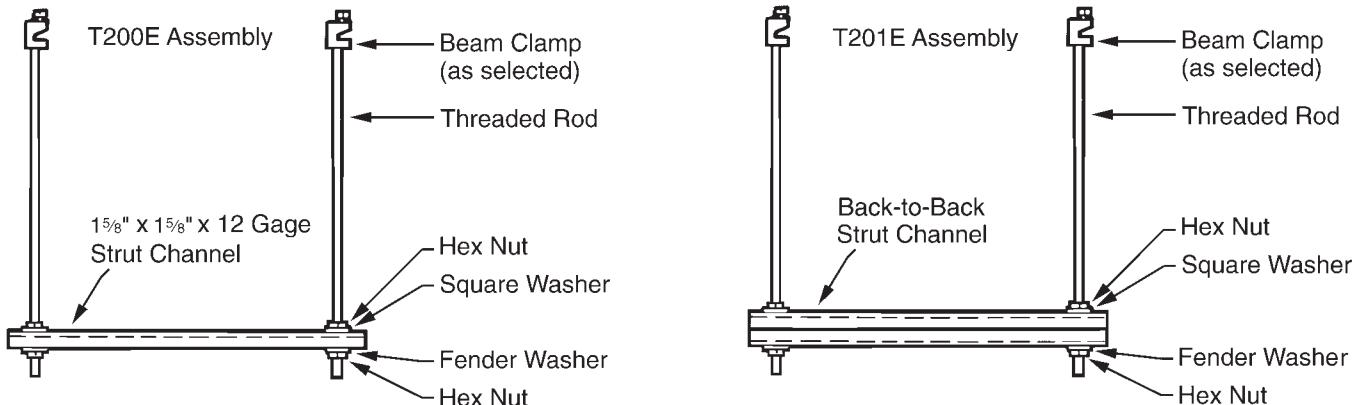

\*\* Other channel types and finishes available upon request. Contact factory.

To order hardware only:

3/8" - PGV380000

1/2" - PGV120000

### TRAPEZE HANGER SUPPORT

Assy. Type	Channel Length*	Channel Finish**	Rod Diameter	Rod Length	Beam Clamp
P200	16" (407mm)	GV (Pre-Galv)	38=3/8" (9.53mm)	000 - No Rod	A - PS 85
	19" (483mm)	HG (Hot Dipped Galv)	12=1/2" (12.7mm)	036 - 36" (914mm)	B - P2622
	22" (559mm)			072 - 72" (1828mm)	O - No Clamp
	28" (712mm)			120 - 120" (3048mm)	R - Rod Coupler
	34" (864mm)			144 - 144" (3658mm)	S - Special
	40" (1017mm)				
	46" (1169mm)				

Example: T200E22GV12036B is a Single 22" pre-galvanized channel with 1/2" x 36" drop rod and P2622 clamp.

Note:

\* Order channel length 10" longer than tray width. For example, 46" channel for 36" tray.

\*\* Other channel types and finishes available upon request. Contact factory.

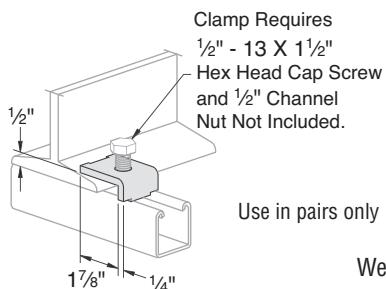

To order hardware only:

3/8" - PGV380000

1/2" - PGV120000

## BEAM CLAMPS

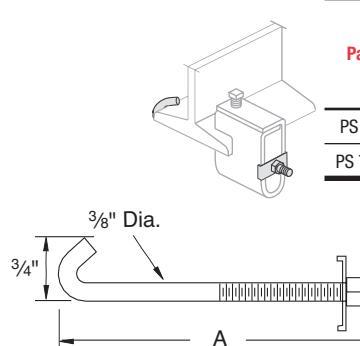

### PS 686 - BEAM CLAMP

**Load Rating:**  
600 lbs. with 12 ga. channel  
500 lbs. with 14 ga. channel

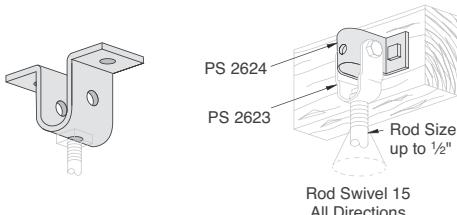

Weight/100 pcs: 26 lbs.

### PS 736 - HOOK ROD ASSEMBLY

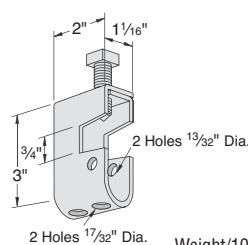

Part No.	Flange Width		A Size	Wt./100 pcs
	Max	Min		
PS 736 J6	7"	3"	8 5/8"	24
PS 736 J10	11"	7"	12 5/8"	33

### PS 2624 - WOOD BEAM HANGER

Weight/100 pcs: 22 lbs.

### PS 2622 - BEAM CLAMP

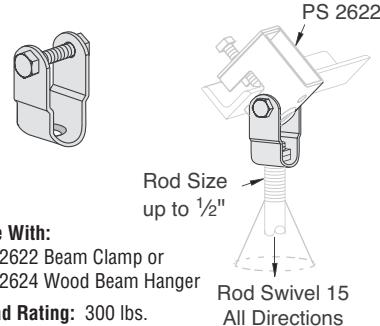

Weight/100 pcs: 41 lbs.

Assembly including  
PS 736 also available.  
Order PS 2622/J6 or  
PS 2622/J10

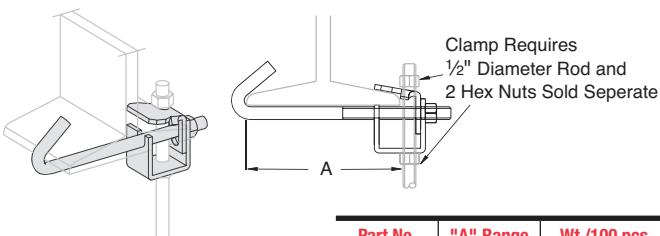

**Load Rating:** 300 lbs.  
**Note:**  
Adaptable for 1/4", 3/8"  
& 1/2" rod with  
PS 3201.

### PS 2623 - SWIVEL ADAPTOR

**Use With:**  
PS 2622 Beam Clamp or  
PS 2624 Wood Beam Hanger  
**Load Rating:** 300 lbs.

### PS 2626 - BEAM CLAMP

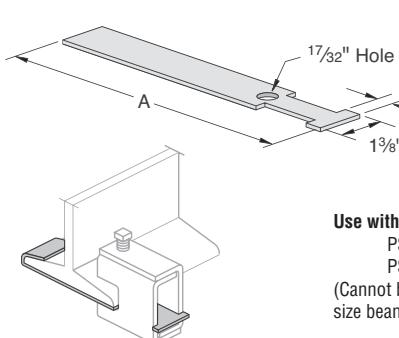

**Finish:** Plain, painted green  
or electro-galvanized

**Load Rating:** 500 lbs.

Part No.	"A" Range	Wt./100 pcs
PS 2626 6	2 1/2" - 6"	125
PS 2626 9	5 1/2" - 9"	140
PS 2626 12	8 1/2" - 12"	171

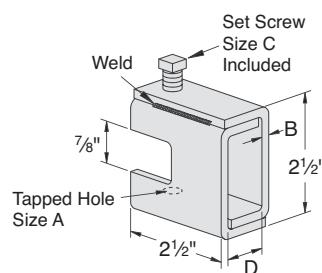

### PS 871 - SAFETY ANCHOR STRAP

**Use with:**  
PS 858,  
PS 865  
(Cannot be used with 5/8" rod  
size beam clamps and larger)

"A" Length	Wt./100 pcs
9"	33
12"	45
15"	57

### PS 858 - HEAVY DUTY BEAM CLAMP

Weld is not continuous it is either  
1 1/4" - 1 3/4" long or 2 spot welds.  
All welds are on the top and bottom.

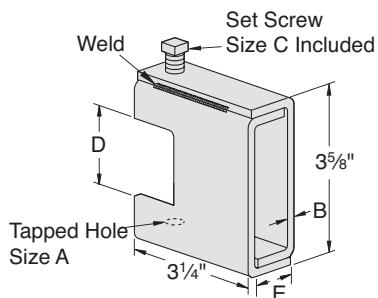

Part No.	"A" Rod Size	B	C	D	Load Ratings lbs.	Wt./100 pcs
PS 858 1/4	1/4" - 20	1/8"	5/8" x 1 1/2"	7/8"	650	67
PS 858 5/16	5/16" - 18					67
PS 858 3/8	3/8" - 16	3/16"			1,100	100
PS 858 1/2	1/2" - 13	1/4"		1 5/16"	1,600	130
PS 858 5/8	5/8" - 11	5/16"	5/8" x 1 1/2"	1 5/16"	2,400	160
PS 858 3/4	3/4" - 10					160

For beams under 7/8" thick flange.

# HARDWARE & COVERS

## BEAM CLAMPS

### PS 865 - WIDE THROAT HEAVY DUTY BEAM CLAMP

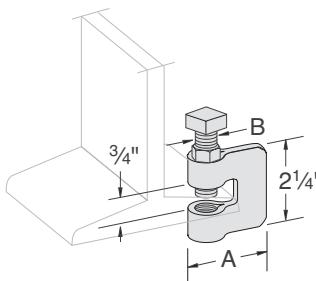

Weld is not continuous it is either 1<sup>1</sup>/<sub>4</sub>" - 1<sup>3</sup>/<sub>4</sub>" long or 2 spot welds. All welds are on the top and bottom.

Part No.	Rod Size	B	C	D	E	Load Ratings lbs.	Wt./100 pcs
PS 865 5/8	5/8"	5/16"	1 1/16"	29/32"	1,100	151	
PS 865 1/2	1/2"	1/4"		15/16"	1,600	195	
PS 865 5/8	5/8"	5/16"		1 5/16"	2,400	225	

For beams between 3/4" (19) to 1 5/8" (41) thick flanges.

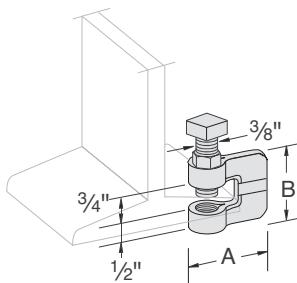

### PS 95 - "C" CLAMP

Rod Size	A	B	Load Rating	Wt./100 pcs
5/8"	2 5/16"	3/8"	330	35
1/2"	2 1/4"	1/2"	380	41
5/8"	2 3/8"	5/8"	450	67
3/4"	2 1/4"	1/2"	500	72

Material: Steel

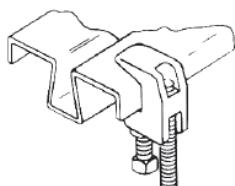

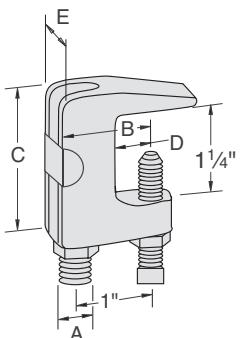

### PS 86 - "C" CLAMP

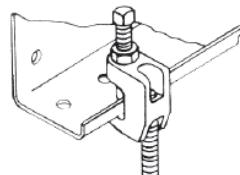

Rod Size	A	B	Load Rating	Wt./100 pcs
5/8"	1 1/16"	1 3/4"	400	38
1/2"	1 23/32"		52	
5/8"	1 15/16"		450	68
3/4"	2 1/2"	2"	600	128

Material: Malleable Iron, Steel Set Screw

### PS 93 - UNIVERSAL "C" CLAMP

At least one full thread must be exposed

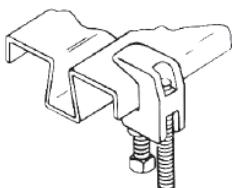

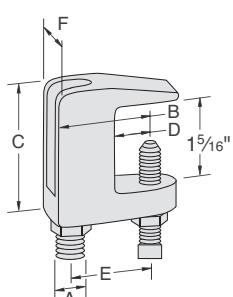

Material: Malleable Iron, Steel Set Screw

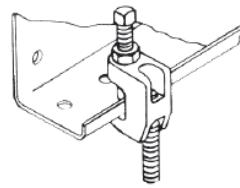

Part No.	Rod Size A	DIMENSIONS (Inches)				Max. Pipe Size	Max. Load (Lbs.)	Wt./100 pcs
		B	C	D	E

**Note:** Contact your Cope representative for loading information on the 11H7A system

To convert 1.5 safety factor to 2.0 multiply w, d, k by .75

w = Pounds per linear foot

d = Deflections (inches)

k = Deflection (in.) for each pound of load

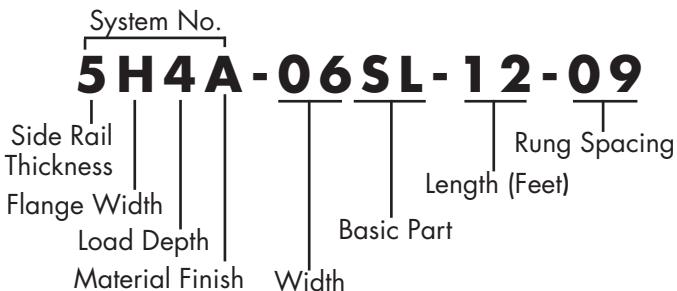

t = Denotes k is less than .001 inch

# I-BEAM CABLE TRAY SYSTEM

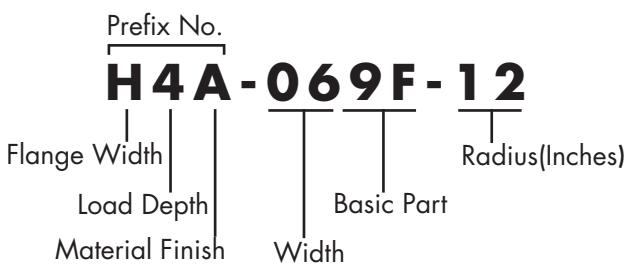

## PART NUMBERING SYSTEM:

Please pay careful attention to the part numbering structure. Example: Catalog No. 5H4A-06SL-12-09 is a 4" load depth aluminum ladder with an I-Beam flange, 6 inches wide, straight length 12 feet long, rungs on 9" centers. Please make sure to use the system numbers from pages 66 and 67 when ordering.

### STRAIGHT LENGTH

### FITTINGS

#### SYSTEM NUMBER (STRAIGHT SECTION ONLY) -

The first four digits make up the system number which identifies the structural, dimensional and material characteristics of the straight length. It is made up of the side rail digits indicating the side rail thickness and flange design, the load depth (inside, in inches) and material finish (aluminum).

- 1H5A:** 3 Thick, I-Beam Rail, 5" Load Depth, Aluminum
- 5H3A:** 5 Thick, I-Beam Rail, 3" Load Depth, Aluminum
- 5H4A:** 5 Thick, I-Beam Rail, 4" Load Depth, Aluminum
- 5H5A:** 5 Thick, I-Beam Rail, 5" Load Depth, Aluminum
- 7H5A:** 7 Thick, I-Beam Rail, 5" Load Depth, Aluminum
- 7H6A:** 7 Thick, I-Beam Rail, 6" Load Depth, Aluminum
- 9H5A:** 9 Thick, I-Beam Rail, 5" Load Depth, Aluminum
- 9H6A:** 9 Thick, I-Beam Rail, 6" Load Depth, Aluminum
- 11H7A:** 11 Thick, I-Beam Rail, 7" Load Depth, Aluminum

**PREFIX NUMBER (FITTINGS ONLY) -** Fittings are ordered using the 3-digit prefix number given in the charts on the fitting pages.

- H3A:** I-Beam Rail, 3" Load Depth, Aluminum
- H4A:** I-Beam Rail, 4" Load Depth, Aluminum
- H5A:** I-Beam Rail, 5" Load Depth, Aluminum
- H6A:** I-Beam Rail, 6" Load Depth, Aluminum
- H7A:** I-Beam Rail, 7" Load Depth, Aluminum

**WIDTH -** The inside width of the tray.

- 06:** 6" Width (152mm)
- 09:** 9" Width (229mm)
- 12:** 12" Width (305mm)
- 18:** 18" Width (457mm)
- 24:** 24" Width (610mm)
- 30:** 30" Width (762mm)
- 36:** 36" Width (914mm)

**Length (STRAIGHT SECTION ONLY) -** The length of the tray in feet.

- 12:** 12' Length (3.7m)
- 20:** 20' Length (6.1m)
- 24:** 24' Length (7.3m)
- 30:** 30' Length (9.1m)

**BASIC PART NUMBER -** Identifies the straight length, fitting, or accessory.

- SL:** Straight Length
- 9F:** 90° Horizontal Elbow
- 6F:** 60° Horizontal Elbow
- 4F:** 45° Horizontal Elbow
- 3F:** 30° Horizontal Elbow
- 9O:** 90° Vertical Outside Elbow
- 6O:** 60° Vertical Outside Elbow
- 4O:** 45° Vertical Outside Elbow
- 3O:** 30° Vertical Outside Elbow
- 9I:** 90° Vertical Inside Elbow
- 6I:** 60° Vertical Inside Elbow
- 4I:** 45° Vertical Inside Elbow
- 3I:** 30° Vertical Inside Elbow
- FT:** Horizontal Tee
- TT:** Horizontal Tapped Tee
- FC:** Horizontal Cross
- TC:** Horizontal Tapped Cross
- VT:** Vertical Tee
- SR:** Vertical Cable Support Elbow
- ST:** Straight Reducer
- RH:** Right Hand Reducer
- LH:** Left Hand Reducer
- RY:** 45°Y" Right Hand Branch
- LY:** 45°Y" Left Hand Branch

**RUNG SPACING -** The center-to-center distance between rungs on straight length. Rung spacing is maintained through centerline of all fittings.

- 09:** 9" Nominal (229mm) rung spacing

**Radius (FITTINGS ONLY) -** The radius of bend.

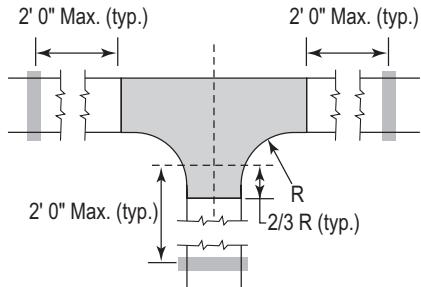

- 12:** 12" Length (305mm)
- 24:** 24" Length (610mm)
- 36:** 36" Length (914mm)

## I-BEAM FITTINGS

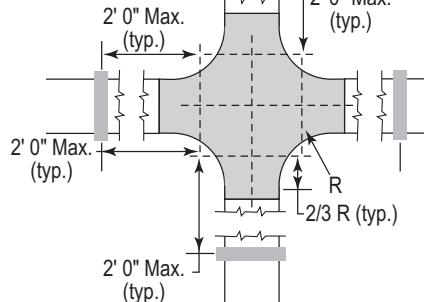

Fittings are used to change the size or direction of the cable tray. A wide variety of standard fittings are offered to simplify installation of a tray system. Horizontal or vertical bends are offered for each tray width and with angles of 30°, 45°, 60° or 90°. The radius of the bend, whether horizontal or vertical, can be 12", 24", 36", or even greater on a custom basis. Specification of the radius of the bend involves a trade-off between available space, minimum bending radius of cables, ease of cable pulling, and cost. The most common radius is 24 in. Fittings are not subject to NEMA/CSA load ratings and the diagrams below illustrate how the tray should be supported near the fittings.

When a standard angle will not work, field fittings or adjustable elbows can be used. Refer to NEMA VE2 Installation Guidelines for suggested support locations for these situations.

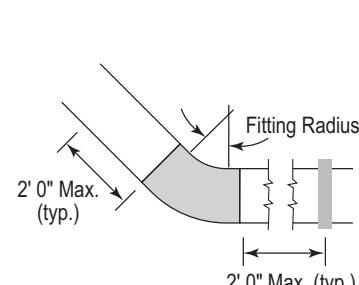

### Support for Flat Fittings

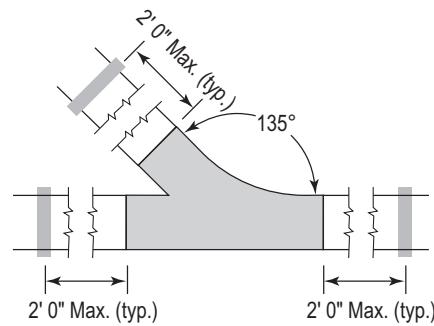

Horizontal Tee

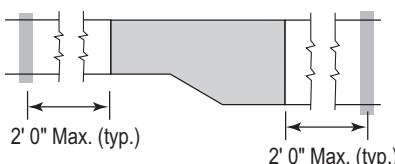

Horizontal Cross

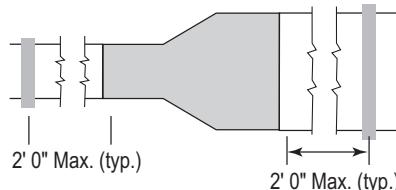

Horizontal Elbow

Horizontal WYE

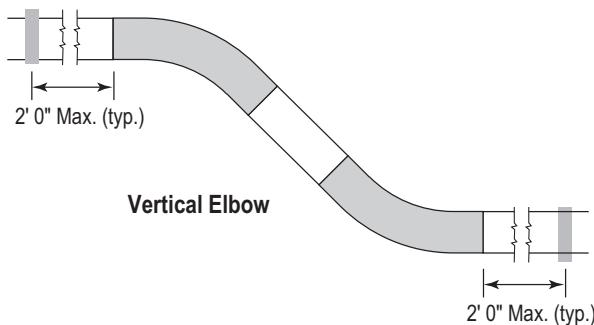

Offset Reducer

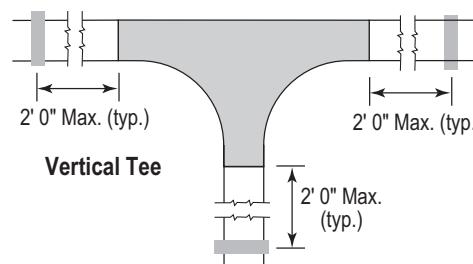

Straight Reducer

### Support for Vertical Fittings

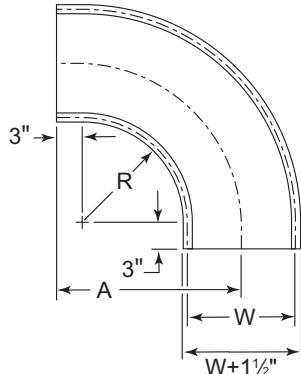

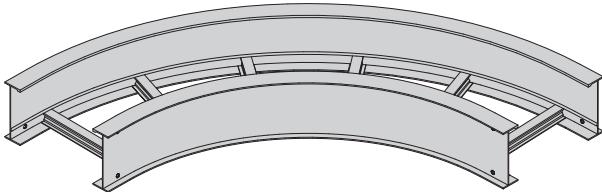

Vertical Elbow

Vertical Tee

Grounding Chart

## CONNECTOR PLATES

### TRAY CONNECTORS

#### CATALOG NUMBER (ALUMINUM)

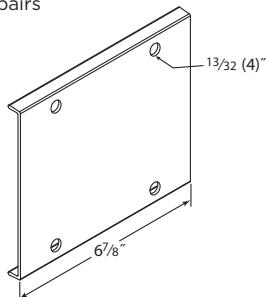

Part	Load Depth	Basic No.
H3A	3"	-02RC
H4A	4"	-02CE
H5A	5"	-02CV
H6A	6"	-02CH
H7A	7"	-02CA

**Example:** H3A -02RC for I-Beam flange, 3" load depth, aluminum, universal curvilinear connector.

**Note:** Hole patterns match corresponding tray. Three-hole pattern illustrated.

### UNIVERSAL CONNECTOR [RC]

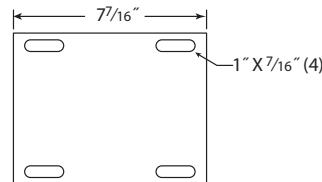

**Note:** Sold in pairs

11 Gage Steel, 0.125" Aluminum  
3/8"-16 spline bolts & flange nuts furnished.

### EXPANSION CONNECTOR [CE]

**Note:** Sold in pairs

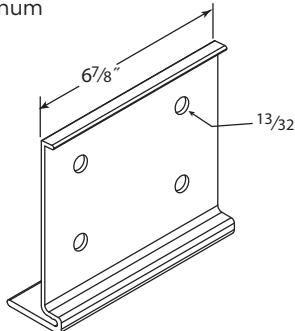

11 Gage Steel, 0.125" Aluminum  
3/8"-16 cap screws & Nylok nuts furnished and  
3/8"-16 spline bolts & flange nuts furnished.

**Note:** Bonding Jumpers are required and are sold separately.

### MID-SPAN SPLICING PLATE [RC]

3/8" - Aluminum

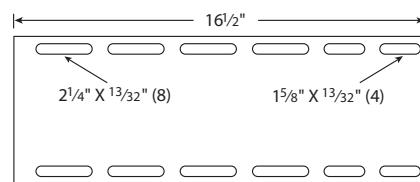

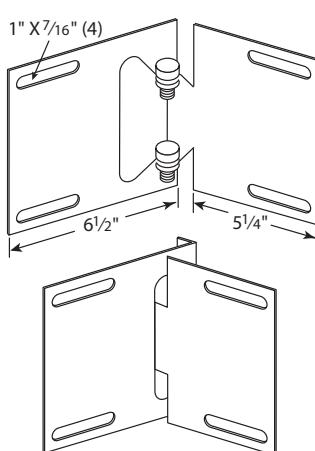

#### CATALOG NUMBER

Part	Use With System
H5A-02RC-MID	7H5A, 9H5A
H6A-02RC-MID	7H6A, 9H6A

### HORIZONTAL ADJUSTABLE CONNECTOR [CH]

**Note:** Sold in pairs - inner & outer

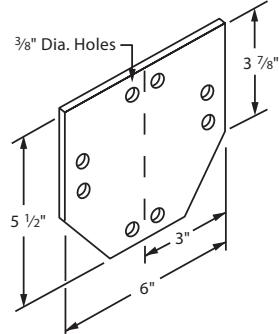

0.125" Aluminum  
Horizontal Adjustable Splice Plate to be used with HCH hinge  
3/8"-16 spline bolts and flange nuts furnished.

### MID-SPAN SPLICING PLATE [RC]

Catalog Number: H7A-O2RCOMID

3/8" - Aluminum

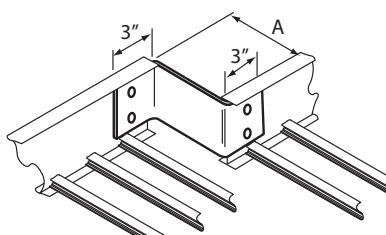

For use with 11H7A Systems.

See Page 149  
for Electrical  
Grounding Chart

### REDUCING CONNECTOR [CO]

**Note:** not sold in pairs

0.125" Aluminum

For offset reductions - use 1 of above with standard connector plate.

For straight reductions - use 2 (of 1/2 reduction dim.).

3/8"-16 spline bolts and flange nuts furnished.

#### CATALOG NUMBER (ALUMINUM)

Part	Load Depth	Basic Number	"A" Dimension
H3A	3"	-30CO	30" (762mm)
H4A	4"	-27CO	27" (686mm)
H5A	5"	-24CO	24" (610mm)
H6A	6"	-21CO	21" (533mm)
H7A	7"	-18CO	18" (457mm)
		-15CO	15" (381mm)
		-13CO	13 1/2" (343mm)
		-12CO	12" (305mm)
		-10CO	10 1/2" (267mm)
		-09CO	9" (229mm)
		-07CO	7 1/2" (191mm)
		-06CO	6" (152mm)
		-04CO	4 1/2" (114mm)
		-03CO	3" (76mm)
		-01CO	1 1/2" (38mm)

**Example:** H3A-03CO for I-Beam flange, 3" load depth, aluminum, 3" Reducer Connector. Typical Use: 9" to 6", or use 2 for 12" to 6", etc.

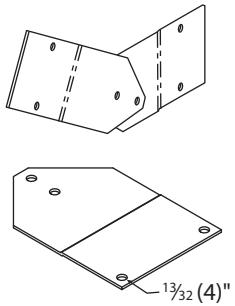

# I-BEAM CABLE TRAY SYSTEM

## CONNECTOR PLATES

### VERTICAL ADJUSTABLE CONNECTOR [CV]

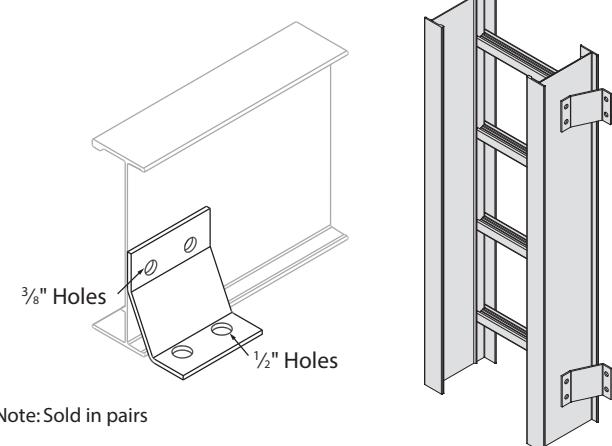

11 Gage Steel, 0.125" Aluminum  
3/8"-16 spline bolts & flange nuts furnished.

Note: Sold in pairs

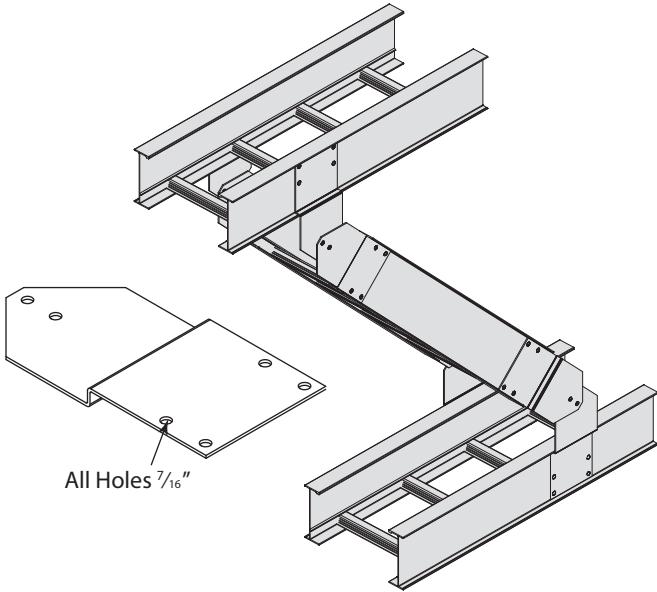

### HEAVY DUTY HOLD DOWN BRACKET [7-HDHDB]

2 - 3/8" Holes & 2 - 1/2" Holes.

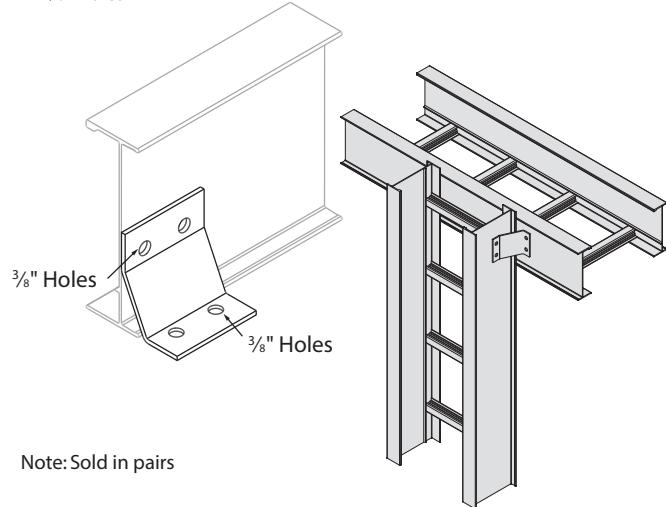

### VERTICAL ADJ. BRANCH PIVOT CONNECTOR [BPC]

Note: Sold in pairs

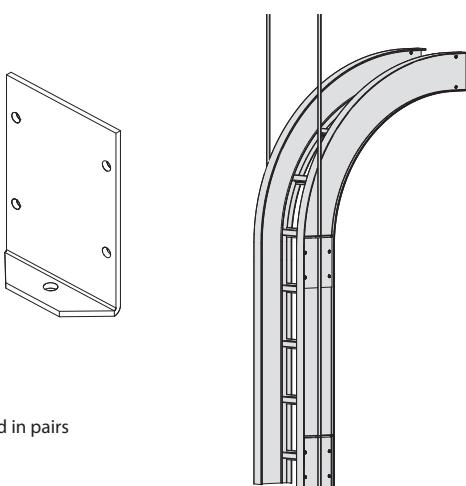

### CROSS CONNECTION BRACKET [CCB]

4 - 3/8" Holes

Note: Sold in pairs

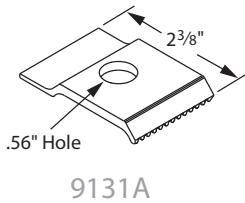

### VERTICAL HANGER SPLICE PLATE [VH]

Note: Sold in pairs

Catalog No.	For Use With Cope System Number
H-9043-412	5H3A
H-9043-500	5H4A
H-9043-619	7H5A
H-9043-724	7H6A
H-9043-624	9H5A
H-9043-724	9H6A
H-9043-800	11H7A

I-Beam Supports can be bolted anywhere along the straight runs. They can be bolted directly onto the coupler plates at splices of straight runs and riser fittings, or they can be bolted at any place in the run by field-drilling side rails. I-Beam supports are used with either 3/8" or 1/2" hanger rods. Finish is aluminum.

Catalog No.	Material
9131A	Aluminum
H6A-02RC-MID	Stainless Steel Type 316

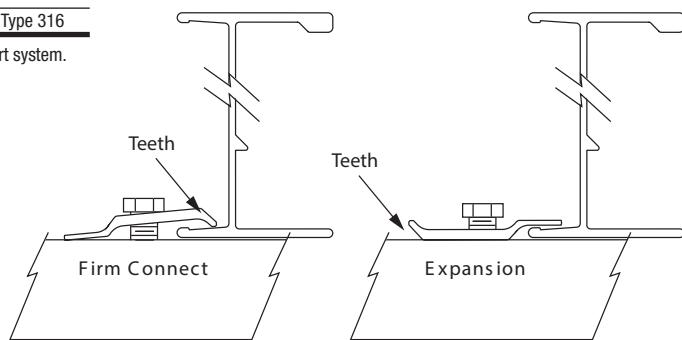

Hardware purchased separately to suit support system.

Catalog No. 9131A-HDW (Complete Hardware Kit)

Hardware list:

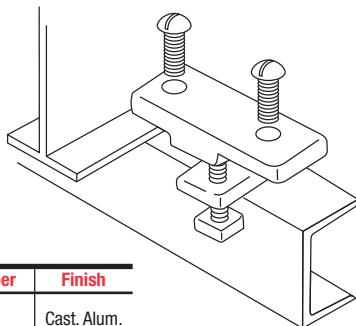

- (2) 9131A Combination hold-down clamp & expansion guides
- (2) PS 6024 - 1/2" - 13 x 1 1/4" Cap Screw
- (2) PS 209 - 1/2" Flat Washer
- (2) PS NS - Clamping Nut (Strut Nut)

## COMBINATION HOLD-DOWN / EXPANSION GUIDE [9053]

Universal Guide: for either side of ladder. Use when tray is mounted on I-beams or channels. No drilling required.

Note: Use set screws for firm hold down

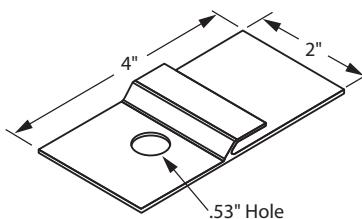

Type	Catalog Number	Finish
Combination Guide	8-9053	Cast. Alum.

Note: Electroplated set screws included

## ISOLATION PAD [9131-IP]

The Isolation pad provides protection from galvanic corrosion when Aluminum tray is mounted on steel supports.

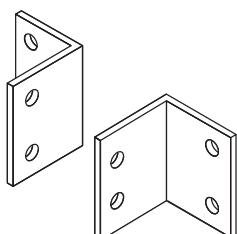

Note: For use with the 9131A-HDW shown above.

Hardware purchased separately

## BOX SPLICE PLATE [CA]

Note: Sold in pairs

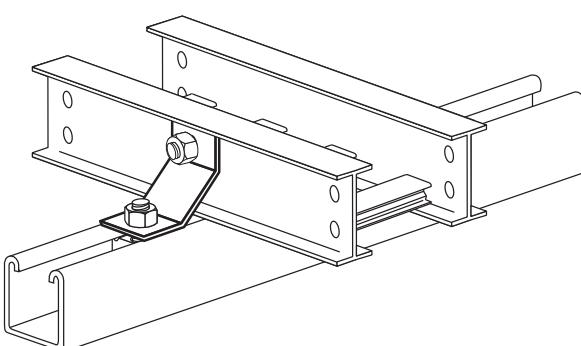

Use to attach the end of a cable tray to a distribution box or control panel.

## CATALOG NUMBER

Part	Load Depth	Finish	Basic No.
H3A	3"	A - Alum.	-02CA
H4A	4"		
H5A	5"		
H6A	6"		
H7A	7"		

Example: H4A -02CA for 4" load depth, aluminum Box Splice Plate.

Catalog No.	Material
9132	Mill Galvanized
9133	Stainless Steel

Hardware purchased separately to suit support system.

**COVERS** for straight sections shown. Standard fitting covers are flat solid type (NF). Aluminum covers are fabricated from 0.040" aluminum AA-3150-H14.

NF – Flat Solid

FS – Flat Solid  
w/  $\frac{3}{8}$ " Flange

NL – Flat Louvered

PF – Peaked Flanged  
Solid w/  $\frac{3}{8}$ " Flange  
(suffix height)PP – Peaked 2 to 3 Pitch  
Flanged Solid  
w/  $\frac{3}{8}$ " Flange

**Note:** Use EM-CC Cover Screws (see pg. 57) to attach PH, PV, HS & HV covers.

**COVER CATALOG NUMBER – STRAIGHT SECTIONS (ALUMINUM)**

Type	Basic No. (Width)	Length	Height*
NFHA	-06SL = 6" (152mm)	-12'	-2"
FSHA	-09SL = 9" (229mm)	-10'	
NLHA	-12SL = 12" (305mm)	-06'	
PFHA	-18SL = 18" (457mm)		
PPHA	-24SL = 24" (610mm)		
	-30SL = 30" (762mm)		
	-36SL = 36" (914mm)		

\*PF only, 2" height standard. Consult factory for other heights.

**Example:** NLHA-09SL-12 is a flat louvered aluminum cover for a 9" wide I-Beam 12' long

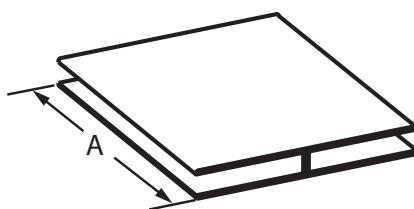

**COVER CATALOG NUMBER – FITTINGS (ALUMINUM)**

Type	Load Depth	Width/Basic No.	Radius
NFHA	3"	-06 XX **	12"
FSHA	4"	-09 XX **	24"
	5"	-12 XX **	36"
	6"	-18 XX **	
		-24 XX **	
		-30 XX **	
		-36 XX **	

\* Load depth for outside riser or vertical tee only.

\*\* XX from fitting selection page 68

**Example:** NFH6-369F-24 is a non-flanged solid cover for a 36" wide horizontal 90° elbow with a 24" radius

**JOINT PLATE**

Joint plate is black PVC and is offered in 10' lengths to be field cut to desired length, or in precut lengths for specified covers.

**JO-120** is joint plant in 10' lengths.

Joint plate for specified covers is specified as follows.

**Tray Width "A"**

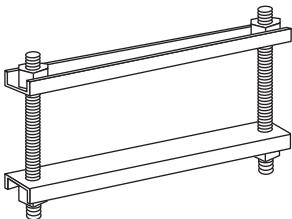

JP-06 = 6"	(152mm)
JP-09 = 9"	(229mm)
JP-12 = 12"	(305mm)
JP-18 = 18"	(457mm)
JP-24 = 24"	(610mm)
JP-30 = 30"	(762mm)
JP-36 = 36"	(914mm)

**Example:** JP-06 is a joint plate for 6" wide tray.

# I-BEAM CABLE TRAY SYSTEM

## COVER ACCESSORIES

### DOUBLE CLAMP CONNECTOR [DC]

For all covers except hat & peak type. Furnished with:  
(2)  $\frac{1}{4}$ "-20 all-thread rods  
(4) hex nuts, flat washers and lock washers.

### CATALOG NUMBER (ALUMINUM CLAMP)

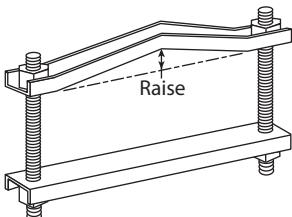

Part	Load Depth	Width	Type
H3A	3"	-06	DC
H4A	4"	-09	
H5A	5"	-12	
H6A	6"	-18	
H7A		-24	
		-30	
		-36	

Suggested spacing:  
Indoor: 2 per 12'  
Outdoor: 3 per 12'  
High Wind: 5 per 12'

*Example:* H4A-12DC for 4" load depth, I-Beam flange, aluminum, Double Clamp Connector

### PEAK COVER CONNECTOR [PC]

**Note:** For PF Covers

### CATALOG NUMBER (ALUMINUM CLAMP)

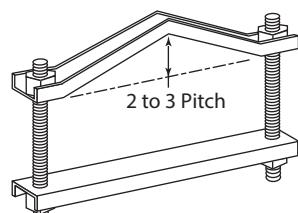

Part	Load Depth	Width	Type	Raise (in)*
H3A	3"	-06, -09	PC	-2
H4A	4"	-12, -18		
H5A	5"	-24, -30		
H6A	6"	-36		
H7A	7"			

\*2" standard raise. Consult factory for other peak heights.

*Example:* H4A-12PC-2 for 4" load depth, I-Beam flange, aluminum, 12" wide, Peak Cover Connector with 2" peak.

### PEAK PITCH COVER CONNECTOR [PP]

**NOTE:** For PP Covers

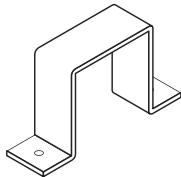

### CATALOG NUMBER (ALUMINUM)

Part	Load Depth	Width	Type
H3A	3"	-06, -09	PP
H4A	4"	-12, -18	
H5A	5"	-24, -30	
H6A	6"	-36	
H7A	7"		

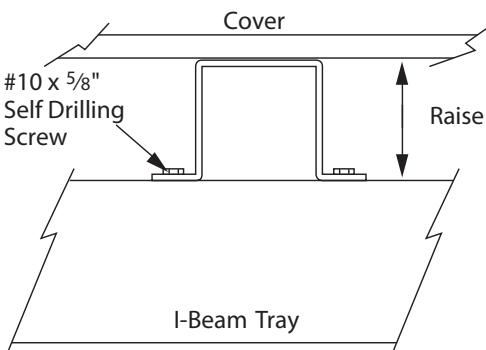

*Note:* 2 to 3 standard pitch.

*Example:* H4A-12PP for 4" load depth, I-Beam flange, aluminum, 12" wide, Pitched Peak Cover

### ELEVATED COVER CONNECTORS [EM-CC]

**Includes:**  
(3) #10 x  $\frac{5}{8}$ " Self drilling screws.  
Suggested spacing:  
Indoor: 3/Side (6 tot.) per 12';

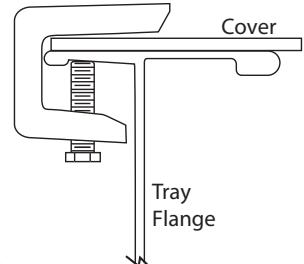

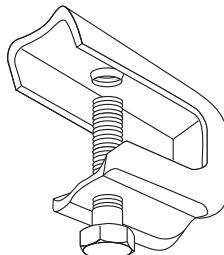

Finish	Type	Height*
8=Alum.	EM-CC	- Raise* (in.)

\*1", 2" or 3" standard.

*Example:* 8-EM-CC-2 for aluminum, Elevated Cover Connector with a 2" raise

### ELECTRO-GALV. STEEL COVER CLIP [PS 135X]

Use with any width tray. Not sold in pairs.

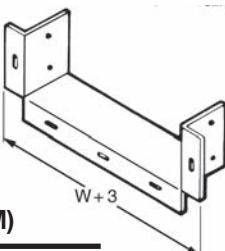

Indoor use only. Suggest spacing 6' max.

## ACCESSORIES

### BOX CONNECTOR [CB]

.080" Aluminum.

**Note:**  $\frac{1}{4}$ "-20 carriage bolts, flat washers, hex nuts furnished

#### CATALOG NUMBER (ALUMINUM)

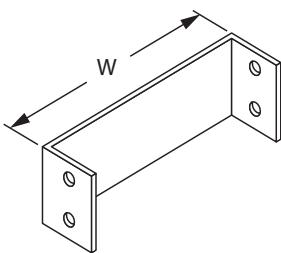

Part	Load Depth	Width
H3A	3"	-06CB = 6" (152mm)
H4A	4"	-09CB = 9" (229mm)
H5A	5"	-12CB = 12" (305mm)
H6A	6"	-18CB = 18" (457mm)
H7A	7"	-24CB = 24" (610mm)
		-30CB = 30" (762mm)
		-36CB = 36" (914mm)

**Example:** H4A-12CB for I-Beam flange, 4" load depth, aluminum, 12" wide, Box Connector.

### BLIND END [BE]

.040" Aluminum

**Note:**  $\frac{3}{8}$ "-16 spline bolts and flange nuts furnished.

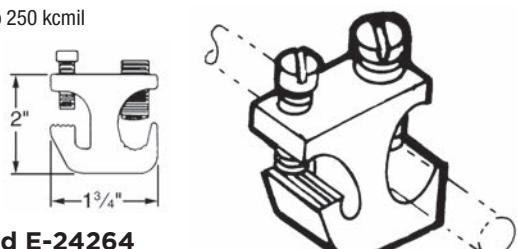

Part	Load Depth	Width
H3A	3"	-06BE = 6" (152mm)
H4A	4"	-09BE = 9" (229mm)
H5A	5"	-12BE = 12" (305mm)
H6A	6"	-18BE = 18" (457mm)
H7A	7"	-24BE = 24" (610mm)
		-30BE = 30" (762mm)
		-36BE = 36" (914mm)

**Example:** H4A-12BE for I-Beam flange, 4" load depth, aluminum, 12" wide, Box Connector.

### CABLE TRAY GROUND CLAMP [9156]

Extruded Alum. with Electrogalvanized Hex Head Screws

Capacity: #6 AWG to 250 kcmil

**UL Listed E-24264**

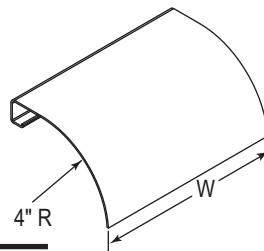

**Certified File No. LR 9795**

### DROP OUT [DO]

.080" Aluminum.

**Note:** (2) #10 x  $\frac{1}{8}$ " self tapping screws furnished.

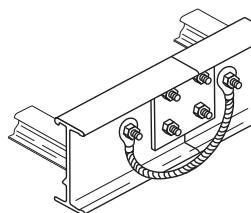

Basic Finish	Width
A - Alum.	-06DO = 6" (152mm)
	-09DO = 9" (229mm)
	-12DO = 12" (305mm)
	-18DO = 18" (457mm)
	-24DO = 24" (610mm)
	-30DO = 30" (762mm)
	-36DO = 36" (914mm)

**Example:** A-12DO for aluminum, 12" wide, Drop Out

### BONDING JUMPER [CBJ]

**Note:** No hardware supplied

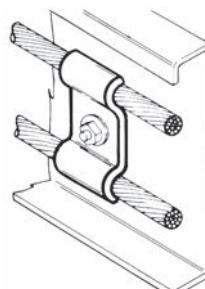

For hardware kit add -HDW:

Ex: CBJ-C-HDW includes  
2ea CBJ-C  
4ea 5003-1  
4ea 5009-1

Catalog No.	Dimensional Data	Amperes as Equipment Ground
CBJ-C	AWG 1/0 copper wire 15½" long overall	800 amperes
CBJ-4C	AWG 4/0 copper wire 15½" long overall	1,600 amperes
CBJ-250C	250 MCM copper wire 15½" long overall	2,000 amperes

### GROUND CABLE RETAINER CLAMP

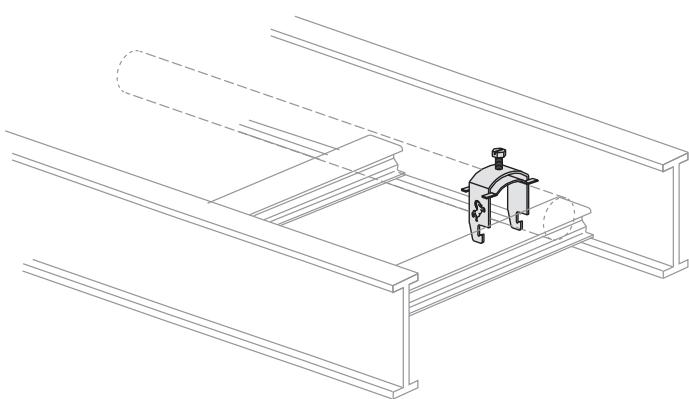

Catalog No.	Capacity	Metal & Finish	Dimensions

### WALL PENETRATING SLEEVE ASSEMBLY

#### Part No. SS89042(W)\*

W = Tray Width

\*=Fitting 3-Digit Prefix

**Note:** Standard penetration sleeves are manufactured from mill galvanized steel. Aluminum sleeves are available upon request.

## BARRIER STRIP

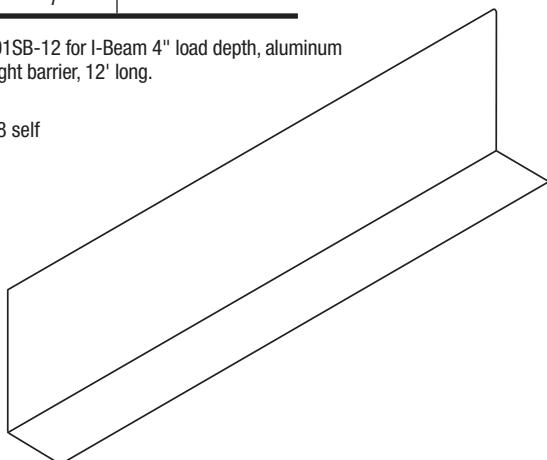

## UNIVERSAL ALUMINUM BARRIER STRIP - STRAIGHT SECTION [SB]

## CATALOG NUMBER (ALUMINUM)

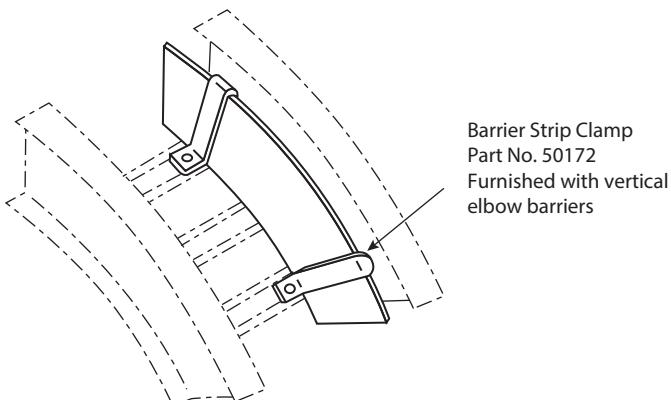

Part	Load Depth	Basic No. - Length
3A	3"	-01SB-10 - 10'
4A	4"	-01SB-12 - 12'
5A	5"	
6A	6"	
7A	7'	

Example: 4A-01SB-12 for I-Beam 4" load depth, aluminum straight barrier, 12' long.

Furnished with 8 self tapping screws.

## BARRIER STRIP VERTICAL ELBOW OUTSIDE [OB] &amp; INSIDE [IB]

## CATALOG NUMBER (ALUMINUM)

Part	Load Depth	Bend (deg.)	Basic No.	Radius
3A	3"	90	OB = Outside	12" (305mm)
4A	4"	60	IB = Inside	24" (610mm)
5A	5"	45		36" (914mm)
6A	6"	30		
7A	7'			

Example: 3A-90OB-12 for I-Beam flange, 3" load depth, aluminum 90° outside vertical barrier with 12" radius. (OB Vert. Elbow outside shown) Furnished with sufficient clamp assemblies for installation.

Additional clamp assemblies may be ordered separately.

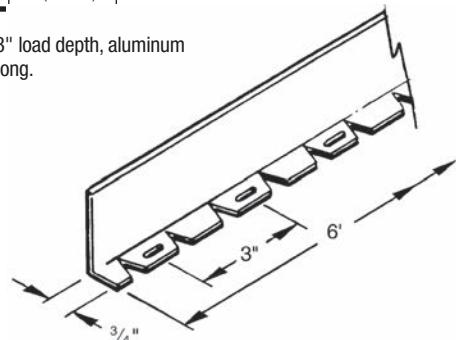

## BARRIER STRIP - HORIZONTAL FITTING [FB]

## CATALOG NUMBER (ALUMINUM)

Load Depth	Finish (LADDER)	Finish (HAT & TROF)	Basic No. 12' Length
3"	6 (Mill Galv.)	2 (Mill Galv.)	-01FB-06
4"	7 (HDGAF)	3 (HDGAF)	
5"	8 (Alum.)	4 (Alum.)	
6"	T (304SS)	U (304SS)	

Example: 38-01FB-06 for 3" load depth, aluminum fitting barrier, 6' long.

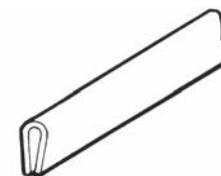

Furnished with 4 barrier strip clamps and necessary hardware.

## NYLON BARRIER SPLICING &amp; PROTECTOR [BSP]

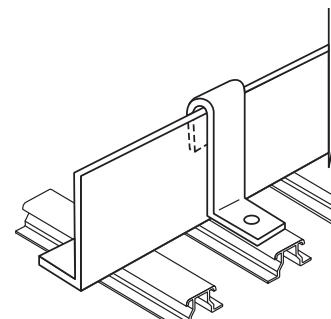

## CATALOG NUMBER

Prefix	Length
BSP	-5 (5" Splice)
	-144 (144" Protector)
	-1200 (100' Roll)

Example: BSP-1200 for 100' roll

## BARRIER STRIP CLAMP (OPTIONAL) [50172]

No. 10 bolt, nut, washer and lock washer furnished.

## CATALOG NUMBER (ALUMINUM)

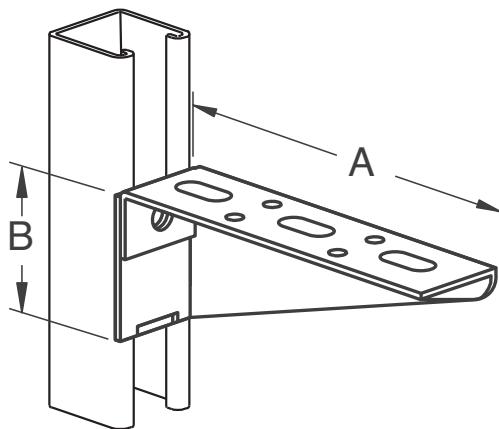

Part	Load Depth	Basic No.
H3A	3"	-50172
H4A	4"	
H5A	5"	
H6A	6"	
H7A	7"	

Example: H34-5072 for I-Beam flange, 3" load depth, aluminum clamp.

# I-BEAM CABLE TRAY SYSTEM

## SUPPORTS

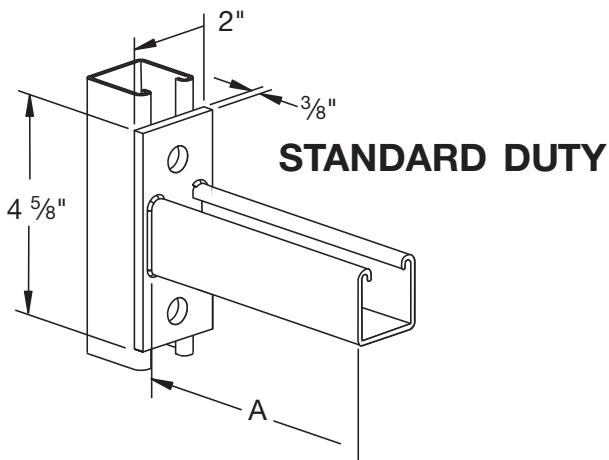

### GUSSET-TYPE SUPPORTS

For use with all types of Cope I-Beam systems.  
Finish is electro-galvanized.  
Order hardware separately.

Catalog No.	I-Beam Width	Dimension		Uniform-Load Rating
		Dim. A	Dim. B	
PS 838R-12	6"	12"	3 $\frac{7}{16}$ "	275 lbs.
PS 838R-16	9"	16"	4 $\frac{7}{16}$ "	275 lbs.
PS 838R-18	12"	18"	4 $\frac{15}{16}$ "	275 lbs.
PS 838R-24	18"	24"	6 $\frac{7}{16}$ "	275 lbs.
PS 838R-30	24"	30"	7 $\frac{1}{16}$ "	275 lbs.

### CHANNEL-TYPE SUPPORTS

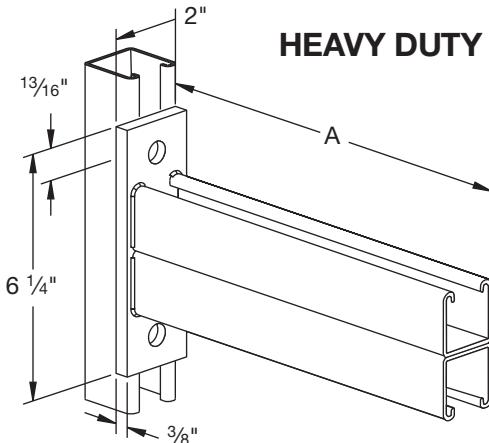

For use with all types of Cope I-Beam systems.  
Finish is electro-galvanized.  
Order hardware separately.

#### STANDARD DUTY FOR LIGHTER LOADS

Catalog No.	I-Beam Width	Dimension "A"	Uniform-Load Rating*
PS 651-12	6"	12"	600 lbs.
PS 651-15	9"	15"	480 lbs.
PS 651-18	12"	18"	400 lbs.
PS 651-24	18"	24"	300 lbs.
PS 651-30	24"	30"	240 lbs.

\* Mounted on 12 Ga. Channel.

### DOUBLE CHANNEL-TYPE SUPPORTS

For use with all types of Cope I-Beam systems.  
Finish is electro-galvanized.  
Order hardware separately.

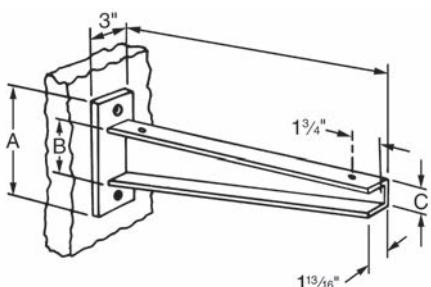

#### HEAVY DUTY FOR HEAVIER LOADS

Catalog No.	I-Beam Width	Dimension "A"	Uniform-Load Rating*
PS 809-12	6"	12"	2,000 lbs.
PS 809-15	9"	15"	1,600 lbs.
PS 809-18	12"	18"	1,330 lbs.
PS 809-24	18"	24"	1,000 lbs.
PS 809-30	24"	30"	800 lbs.
PS 809-36	30"	36"	660 lbs.
PS 809-42	36"	42"	570 lbs.

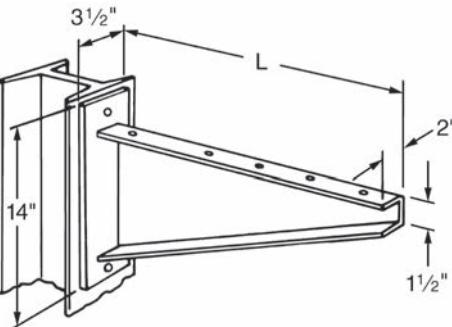

\* Mounted on 12 Ga. Channel.

## SUPPORT BRACKETS &amp; TRAY HANGERS

## WALL SUPPORT BRACKETS

## STRUCTURAL SUPPORT BRACKET

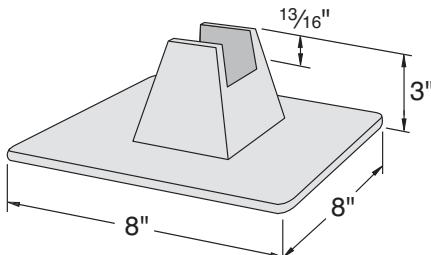

Catalog Number	Ladder Width	Length "L"	Dimensions			End-Load Rating*
			"A"	"B"	"C"	
9037-12	6"	12 1/4"	10"	6"	2"	2000 lbs.
9037-18	12"	18 1/4"	11"	7"	2 1/2"	2000 lbs.
9037-24	18"	24 1/4"	11"	7"	2 1/2"	1600 lbs.
9037-30	24"	30 1/4"	12"	8"	4"	1300 lbs.

## TRAY HANGER & SUPPORTS

### SINGLE ROD HANGER SUPPORT

#### CATALOG NUMBER

Assy. Type	Channel Length*	Channel Finish**	Rod Diameter	Rod Length	Beam Clamp
P200	14" (356mm)	GV (Pre-Galv)	38=3/8" (9.53mm)	000 - No Rod	A - Bridgeport
	17" (432mm)		12=1/2" (12.7mm)	036 - 36" (914mm)	B - P2622
	20" (508mm)			072 - 72" (1828mm)	O - No Clamp
	26" (661mm)	HG (Hot Dipped Galv)		120 - 120" (3048mm)	R - Rod Coupler
	32" (813mm)			144 - 144" (3658mm)	S - Special
	38" (966mm)				
	44" (1118mm)				

Example: P20020GV12036B is a Single 20" pre-galvanized channel with 1/2" x 36" drop rod and P2622 clamp.

Note:

\* Order channel length 8" longer than tray width.

For example, 44" channel for 36" tray.

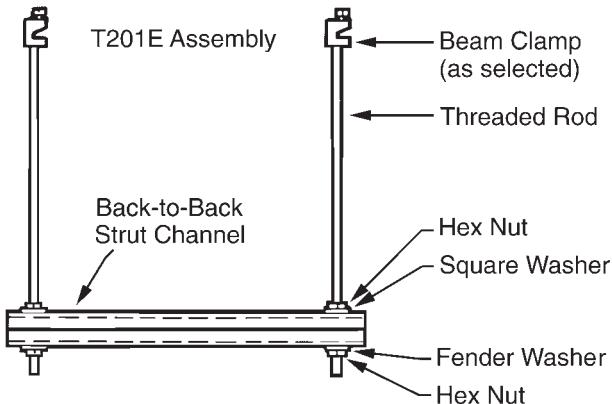

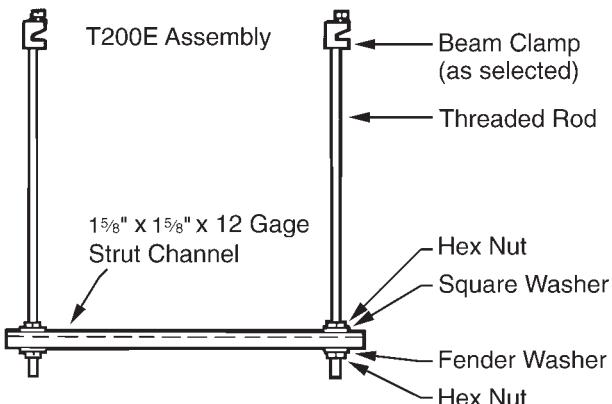

\*\* Other channel types and finishes available upon request. Contact factory.

To order hardware only:

3/8" - PGV380000

1/2" - PGV120000

### TRAPEZE HANGER SUPPORT

#### CATALOG NUMBER

Assy. Type	Channel Length*	Channel Finish**	Rod Diameter	Rod Length	Beam Clamp
T200E	16" (407mm)	GV (Pre-Galv)	38=3/8" (9.53mm)	000 - No Rod	A - PS 85
	19" (483mm)		12=1/2" (12.7mm)	036 - 36" (914mm)	B - P2622
	22" (559mm)			072 - 72" (1828mm)	O - No Clamp
	28" (712mm)	HG (Hot Dipped Galv)		120 - 120" (3048mm)	R - Rod Coupler
	34" (864mm)			144 - 144" (3658mm)	S - Special
	40" (1017mm)				.
	46" (1169mm)				

Example: T200E22GV12036B is a Single 22" pre-galvanized channel with 1/2" x 36" drop rod and P2622 clamp.

Note:

\* Order channel length 10" longer than tray width. For example, 46" channel for 36" tray.

\*\* Other channel types and finishes available upon request. Contact factory.

To order hardware only:

3/8" - PGV380000

1/2" - PGV120000

## ELECTRICAL GROUNDING CHART

Fitting Prefix Number		Min. X-Sect for 2 Rails (NEC Table 392.7B) Aluminum I-Beam X-Sect Area	Maximum Ground Fault Amperage (in Amps)Aluminum
System	Load Depth		
5H3A	3"	1.00	1,200
5H4A	4"	1.00	1,200
1H5A	5"	1.50	1,600
5H5A	5"	1.50	1,600
7H5A	5"	2.00	2,000
9H5A	5"	2.00	2,000
7H6A	6"	2.00	2,000
9H6A	6"	2.00	2,000
11H7A	7"	2.00	2,000

The table to the left provides the Minimum Cross Sectional area for two side rails. Using the Fitting Prefix Number (H4A), the proper value is determined by the Material (column 3), the Flange (column 1) and Load Depth (column 2). Locate the line containing the Load Depth (column 1) and follow it to the right to the appropriate Flange and Material.

Find that value in Maximum Ground Fault (column 4), follow it to the right to the Material column to determine the Maximum Ground Fault Amperage.

### For Example:

If the fitting prefix is H4A, the Flange is I-Beam, the Load Depth is 4", and the Material is Aluminum. The Minimum Cross Sectional Area (X-Sect Area) is 1.00 sq. in. The Amperage is 1,200.

## TYPICAL SPECIFICATIONS

By specifying the NEMA class designation, you will use the simplest, clearest, and most complete method of specification available and automatically incorporate support span in feet, working (allowable) load in pounds per linear foot, a safety factor of 1.5, a concentrated load if present; and, all other design, manufacturing and test standards including electrical continuity.

## SPECIFICATION ALUMINUM COPE I-BEAM SYSTEM

Cable I-Beam shall be manufactured by a company regularly engaged in the manufacture of metal cable trays and shall be a member of NEMA. Trays shall conform to NEMA Metal Cable Tray Standard Publication VE-1 (latest issue).

1. Cable I-Beam shall be NEMA Classification 12B of the widths indicated.
2. Material shall be aluminum alloy with side rails and rungs of 6063.
3. Finish shall be natural.
4. Inside load depth to be NEMA Standard 4".
5. Fittings shall be 12" radius for control cables and 24" radius for power cables. (This must be commensurate with the cable manufacturers' recommended minimum bending radius.)
6. All top level trays in stacks, and single runs to have raised peaked, aluminum ventilated covers with heavy duty hold down clamps every 3'-0".

All you need to do is add the desired load depth, rung spacing, radius of fittings, metal and finish. You may add accessory information pursuant to your project. Here is a typical specification for an outdoor tray system where the working (allowable) load has been determined to be approximately 75 pounds per foot on support spans of 12'-0".

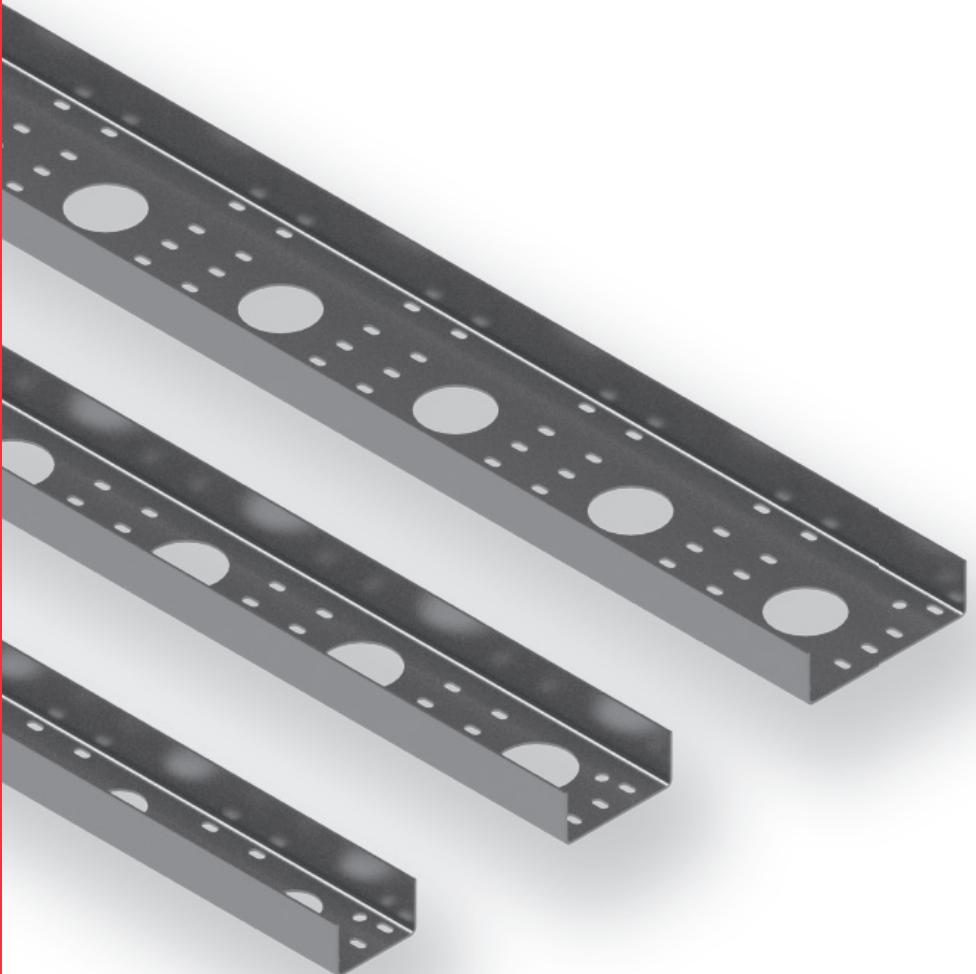

7. Install expansion connectors, expansion guides, and hold down clamps per NEMA Standard VE-1.
8. Where slopes or horizontal bends of trays are not at the Standard NEMA angles, use adjustable connectors. If the angle is too great for cable bending radius, use combinations of fitting and adjustable connectors.
9. Separate all cables of different volt ages in the same tray using the manufacturer's standard barriers and barrier hold down system.
10. The Cable I-Beam system will be used as an equipment grounding conductor.
11. To save space fittings shall have 3" tangents. To facilitate field installation use one pair of universal type connector plates for rigid joints.
12. Trays shall be Cope Cable I-Beam System Number 5H4A as manufactured by Atkore International.

# CHANNEL CABLE TRAY SYSTEM

## INTRODUCTION

### COPE® CHANNEL

Cope Channel supports single branches of power or multiconductor control cable or instrument tubing. Ideal for communication, fire alarm, or call station and clock cabling.

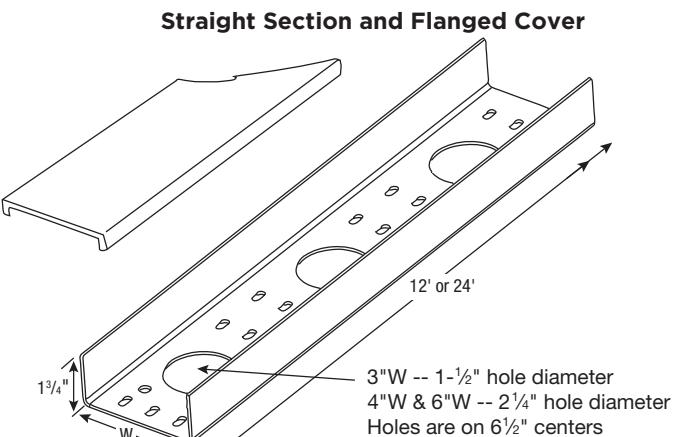

A complete line of devices are available for interfacing with Cope Ladders and Cope Trofs. Compatible with any cable tray system. Cope Channel is more economical than conduit.

Cope Channel is offered in both aluminum and steel, either hot dip mill galvanized (ASTM A 525), or hot dip galvanized after fabrication (ASTM A 386). Covers are available in aluminum and mill galvanized steel. Connectors are furnished with all straight sections and fittings. Other accessories must be ordered separately.

Cope Channel is offered ventilated or solid. Basic units are 3", 4", or 6" wide and are  $1\frac{3}{4}$ " high. Standard lengths are 12' (3.7m) and 24' (7.4m) long. A load chart is furnished to give you guidance on how often you should support the system. Fitting radii available are 12", 24", and 36". Cope Channel meets NEMA VE-1 standards for cable tray.

## ORDERING

For ordering, specify by catalog number using the following prefix to specify the material and finish.

**Catalog Number – Straight Section**

Finish	Width	Length	Type
1124 - Alum.	3" (76mm)	SL-12 = 12' (3.65m)	V - Vented
6122 - Mill Galv.	4" (102mm)	SL-24 = 24' (7.3m)	S - Solid
6123 - HDGAF	6" (152mm)		

Example: 1124-04SL-12-V is a 4" wide, vented, 12' aluminum tray.

**Catalog Number – Flanged Cover**

Finish	Width	Length
FS24 - Alum.	3" (76mm)	SL-12 = 12' (3.65m)
FS22 - Mill Galv.	4" (102mm)	
	6" (152mm)	

Example: FS24-04SL-12 is a 4" wide, 12' aluminum cover.

NOTE: 24' length not available.

**Catalog Number – Flanged Fitting Covers**

Finish	Width/Basic No.	Radius
FS24 - Alum.	-03 XX * (76mm)	12"
FS22 - Mill Galv.	-04 XX * (102mm)	24"
	-06 XX * (152mm)	36"

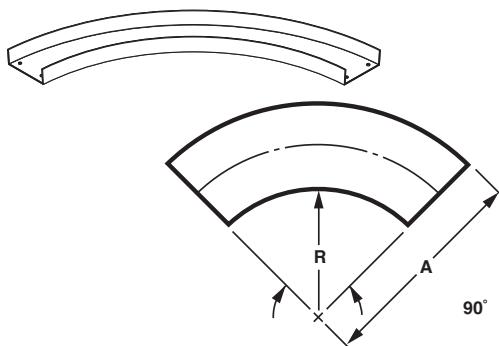

Example: FS24-034F-12 is a 3" wide, 45° Horizontal Elbow, 12" Radius fitting cover.

\* XX from fitting selection base part number

## ACCESSORIES

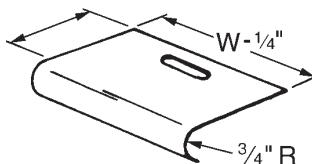

### BLIND END [BE]

Width - W	Part Number
3" (76mm)	M-03BE
4" (102mm)	M-04BE
6" (152mm)	M-06BE

Steel Plated, Furnished with one set  
1/4" x 3/4" bolt, nut and washer.

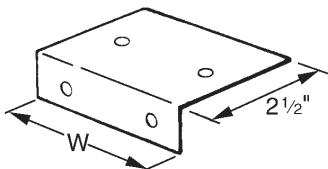

### END DROPOUT [DO]

Width - W	Part Number
3" (76mm)	M-03DO
4" (102mm)	M-04DO
6" (152mm)	M-06DO

Prefixes:  
22 = Mill-Galv. Steel,  
23 = Hot-Dip Galv. Steel,  
24 = Aluminum  
Steel plated, Furnished with one set  
1/4" x 3/4" bolt, nut and washer.

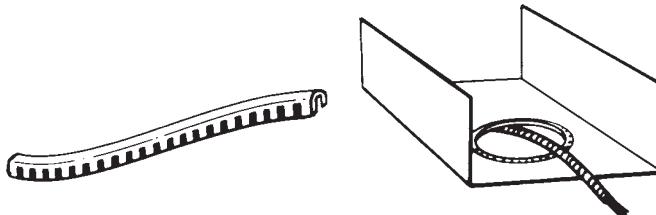

### CHANNEL TO BOX OR WALL CONNECTOR [CB]

Width - W	Part Number
3" (76mm)	M-03CB
4" (102mm)	M-04CB
6" (152mm)	M-06CB

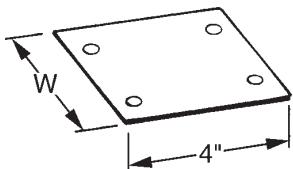

Prefixes:  
22 = Mill-Galv. Steel,  
23 = Hot-Dip Galv. Steel,  
24 = Aluminum  
Furnished with two sets  
bolt, nut and washer. Steel plated.

### NYLON DROPOUT GROMMET [DOG-1]

Use at cable dropouts, over sides or thru vent holes.  
Furnished in 12' lengths. Cut to length in field.

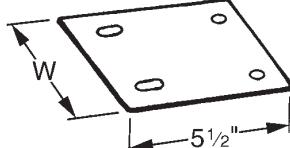

### STANDARD CONNECTOR [CS]

Width - W	Part Number
3" (76mm)	M-03CS
4" (102mm)	M-04CS
6" (152mm)	M-06CS

Prefixes:  
22 = Mill-Galv. Steel,  
23 = Hot-Dip Galv. Steel,  
24 = Aluminum  
Hardware: 3/8" x 3/4" Bolt and flanged nut  
Steel plated incl. (4-sets)

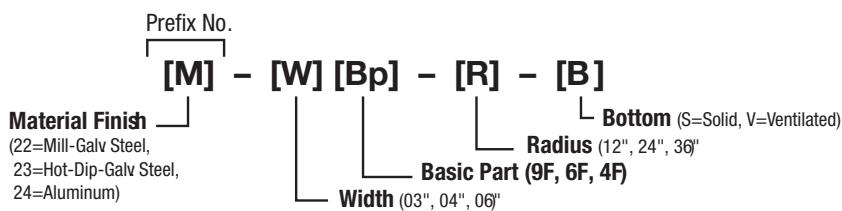

### EXPANSION CONNECTOR [CE]

Width - W	Part Number
3" (76mm)	M-03CE
4" (102mm)	M-04CE
6" (152mm)	M-06CE

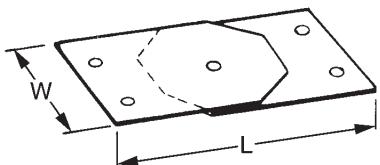

Prefixes:  
22 = Mill-Galv. Steel,  
23 = Hot-Dip Galv. Steel,  
24 = Aluminum  
Hardware: 3/8" x 3/4" Bolt and flanged nut  
Steel plated incl. (4-sets)

### COPE-GLAS CABLE TRAY IS UL LISTED

Cope-Glas Fiberglass Cable Tray as manufactured by Atkore International is UL listed. This UL Listing guarantees the customer that they will receive a quality product that meets the rigid standards of Underwriters Laboratories. Furthermore, it ensures the customer that the product they receive will meet the required UL and NEMA FG1 performance criteria in the following areas:

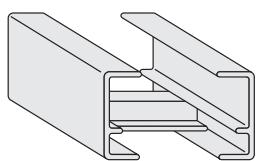

- Low Temperature
- High Temperature
- Flame resistance
- Loading & Deflection
- Dielectric Strength
- Volume Resistivity
- Thermogravimetric Analysis
- Infrared Analysis
- UV Exposure
- Water Exposure & Immersion

In order to maintain the UL Listing, Atkore International must continually undergo follow-up testing with Underwriters Laboratories. This further assures the customer that Atkore International is maintaining its quality with respect to raw materials, production and fabrication. This UL Listing demonstrates Atkore International's commitment to developing and providing its customers with the highest quality fiberglass cable tray products available in the industry.

# COPE-GLAS™ CABLE TRAY SYSTEM

## ADVANTAGES OF COPE-GLAS™ CABLE TRAY

### COPE-GLAS™

#### Systems Advantages

Engineers, designers, contractors, installers and end users have many reasons to choose COPE-GLAS cable tray for their power, signal and control distribution support requirements. Here are some specific advantages that COPE-GLAS systems provide:

#### Corrosion Resistance

The inherent chemical resistance of COPE-GLAS cable tray makes it desirable for severely corrosive environments. Life cycle costs of tray installations can be dramatically reduced by the extended life expectancy of this product. Many original installations have been in service for nearly fifteen years and are providing reliable service.

#### Versatile

COPE-GLAS cable tray systems are available in a variety of sizes and styles. A standard or special design can be fabricated for any indoor or outdoor application regardless of size.

#### Easy Installation

COPE-GLAS cable tray is strong and lightweight, allowing this durable system to be installed quickly and easily. Because there are no sharp edges or burrs, long runs of armored cable can be installed with less chance for cable damage.

## Tray System Advantages Over Other Wiring Methods

Cable tray systems in general provide the following advantages over other wiring methods:

#### Full Ventilation

Power cables need not be derated in a ventilated cable tray system. Explosive gases cannot be trapped or transmitted as in totally enclosed wiring systems.

#### Long Support Spans

COPE-GLAS cable tray systems are designed for up to twenty foot support spans, longer than most other wiring methods. Fewer supports reduce both installation time and cost.

#### Installation Labor Reduced

COPE-GLAS cable tray can be installed after concrete and major building steel and mechanical piping are complete. Crews can start later and finish sooner.

#### Space Efficiency

COPE-GLAS cable tray systems can carry more cable in less space than other wiring methods.

#### Fully Compatible with Other Wiring Methods

COPE-GLAS cable tray is often used in main runs when other wiring methods are employed in branch circuits.

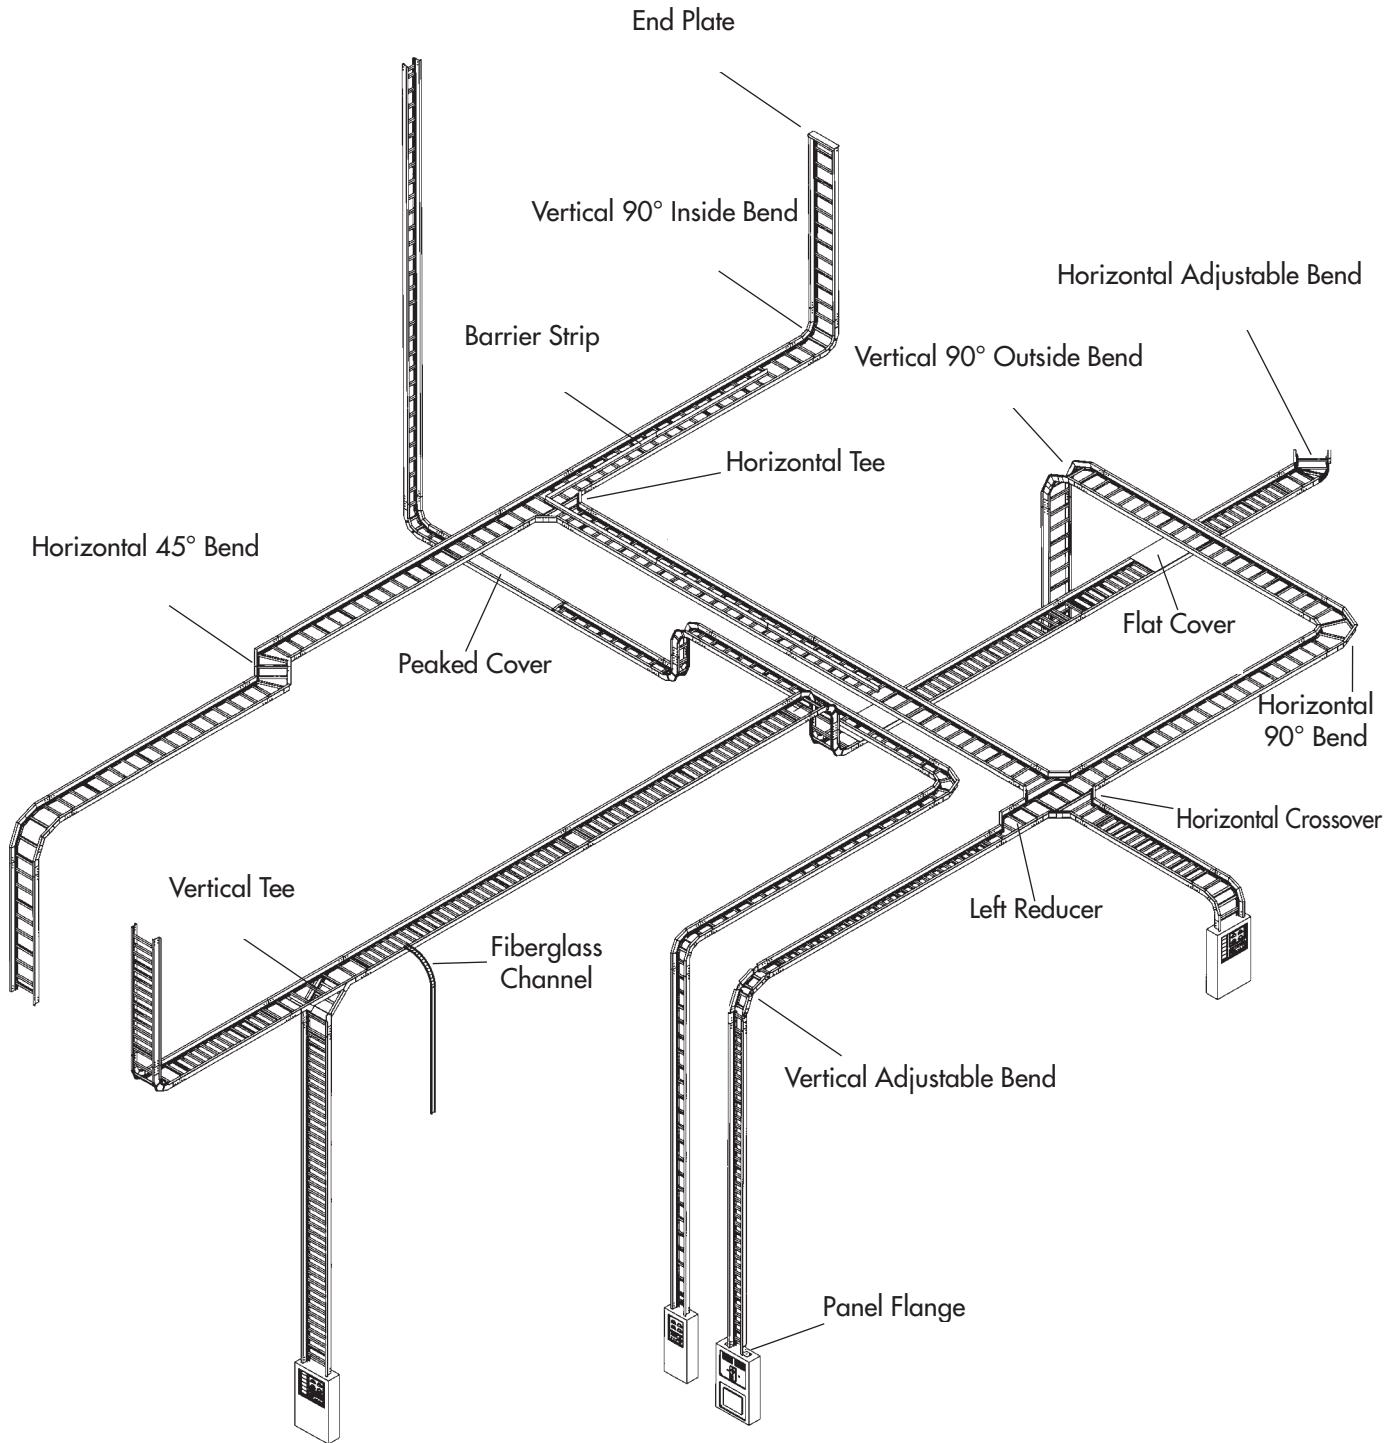

#### Simple Field Modifications

Modifications can be made easily using standard metalworking tools without extensive re-engineering.

#### Accessibility for the Future

New cable can be easily added, replaced or repaired. Circuits can be visually traced, minimizing startup and trouble shooting.

## ADVANTAGES OF COPE-GLAS™ CABLE TRAY

# COPE-GLAS™ CABLE TRAY SYSTEM

## STANDARDS

The standards commonly referenced in specifying cable tray are the National Electric Code®, Article 392-Cable trays; NEMA Standards Publication NO. FG 1, Fiberglass Cable Tray Systems; Canadian Standards Association CAN/CSA-C22.2 No. 126-M91, Cable Tray Systems and Underwriters Laboratories Inc. Standard UL-568, CYOV Non-Metallic Cable Trays. ASTM and UL standards are also referenced to characterize the materials used to construct the fiberglass cable tray.

ASTM standards define physical properties tests for the materials used to pultrude the cable tray. The specific ASTM test methods for mechanical, thermal and flammability properties are identified in the Construction and Physical Properties Section. UL flammability standards applied to fiberglass cable tray materials are also identified in the same section. ASTM and UL standard material properties for fiberglass channel and strut are identical to those of the cable tray because they are pultruded from the same materials.

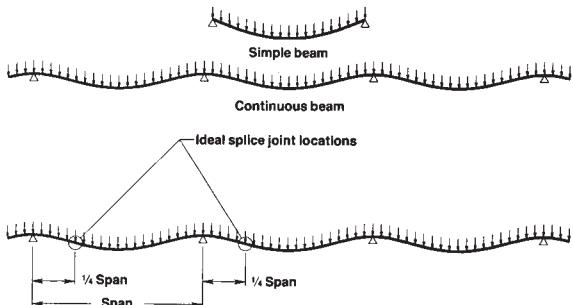

## Load Standards

Section 3 of NEMA FG 1 provides the performance standards and class designations for fiberglass cable tray systems. Based on a twenty foot support span, three working load classifications are recognized:

### LOAD STANDARDS

Load Class	Allowable Working Load
A	50 lbs./linear ft.
B	75 lbs./linear ft.
C	100 lbs./linear ft.

COPE-GLAS "Z" Style standard tray is available in one load classification. The standard four inch fill depth cable tray is designated as type "CZ" for the respective NEMA class. The deep tray, which provides six inches of cable fill

depth, is designated as Type "CZD" for its respective NEMA class. The style "E" tray is available in two load classes, which are designated as Type "BE" and Type "CE" for the respective NEMA classes. All COPE-GLAS tray styles have a 1.5 safety factor and exceed the NEMA FG 1 requirement for the allowable working load.

The Low Profile Cable Tray, Type "LC", is not yet included in the NEMA Standard; however, it has been designed and tested to comply with the intent of NEMA FG 1. A safety factor 1.5 times the Type "LC" working load of 50 lbs./linear foot for a 12 foot length has been confirmed by NEMA FG 1 test methods.

Type "LC" cable tray meets the requirements of Class C1 in the CAN/CSA-C22.2 No. 126--M91 standard.

### Considerations for Cable Tray Deflection

Cable Tray load testing as specified by NEMA Standard FG 1 requires the test article to be a single length of tray simply supported at each end (referred to as a "simple beam" configuration - see diagram below). This requirement was established to standardize testing and because it is impractical to test large tray system assemblies to destruction. Most actual tray installations consist of multiple lengths of connected tray with multiple supports (referred to as a "continuous beam" configuration). The most significant difference between a continuous versus simple beam configuration is that for continuous beam, the presence of adjacent lengths of tray affect the deflection of the tray in the section of interest.

With the same loading and support span, the maximum deflection is dramatically less for continuous compared to simple beam. For example, in the NEMA FG 1 simple beam test, COPE-GLAS Class CE fiberglass cable tray deflects approximately 3.75" at the mid-point of a 20' support span while carrying its rated load of 100 pounds per foot. In continuous beam, the maximum mid-span deflection would be only 0.8" or 20% of that for simple beam.

### Tray Splice Joint Locations vs. Support Locations

In a continuous beam configuration, the bending moment in the tray side rails becomes zero at points located approximately 1/4 of the span from each tray support (referred to as "quarter span points" or just "quarter points"). For example, if the support span is 10 feet, the quarter point is 2.5 feet from the support. Quarter points are ideal locations for spliced tray connections because joints are subjected to minimum bending stresses (see diagram below).

### Effect of Temperature

When continuously exposed to elevated temperatures, the strength properties of reinforced fiberglass are reduced. Working loads shall be reduced based on the following table.

### EFFECT OF TEMPERATURE

Temp. in °F	Approximate % of Strength	
	Polyester Resin	Vinyl Ester Resin
75°	100	100
100°	90	100
125°	78	100
150°	68	90
175°	60	90
200°	52	75

**Note:** Consult the manufacturer when temperatures above 200° F are encountered. Cope-Glas™ is not adversely affected by below freezing temperatures.

### Chemical Resistance

In most applications, fiberglass cable tray is used because of its superior corrosion resistance; therefore, corrosion resistance data for specific environments are very important. The corrosion resistance guide in the Application Environments Section offers performance data in the most common environments. If information for a specific environment is not shown in the guide, please consult the factory.

### Installation/Application

Guidance for cable tray installation, supports and support locations and thermal expansion/ contraction is provided in NEMA FG 1. The installation instructions for supports and support locations contained in the Installation Procedures Section of this catalog are based on the Application Information Section of NEMA FG 1.

**SPECIFICATIONS****COPE-GLAS™ CABLE TRAY SYSTEM****1. Material**

**1.1** Cable tray shall be of pultruded glass reinforced polyester or vinyl ester resin having physical property values as listed in the Design and Application Section of this catalog.

**2. Composition**

**2.1** Glass reinforced components shall have a synthetic NEXUS® veil applied on exterior surfaces to improve weatherability and inhibit ultraviolet degradation.\* An ultraviolet stabilizer shall be incorporated in the resin formulation to further inhibit ultraviolet degradation.

**3. Structural Design**

**3.1** Cable tray shall be of ladder type design having "E" or "Z" shaped side rails.

**3.2** Rungs shall be of the same material as the side rail and shall be secured in place to prevent roll-over when cables are pulled into the tray.

**3.3** Cable tray sections shall be 10' or 20' in length (+ or -18"). Each straight section and fitting shall be furnished with pre-punched holes to accept the splice plate fastener.

**3.4** Tray system design shall meet or exceed allowable working loads in accordance with the appropriate standard, i.e. NEMA FG 1, CAN/CSA-22.2 No. 126-M91 or UL-568.

**3.5** Cable trays shall exceed NEMA FG 1 load requirements.

**3.6** The tray loaded to the allowable working load shall be capable of supporting an additional 200 lb. concentrated static load at midspan without failure or permanent deflection.

**3.7** Tray system design shall meet all the requirements set forth in Underwriters Laboratories Fiberglass Cable Tray Standard, UL-568. The tray system design shall be tested by UL and be issued the appropriate certified UL listing.

\*Due to process limitations, compression molded parts do not incorporate surface veil.

**4. General**

**4.1** Cable trays shall be furnished as a system including all necessary fasteners, hold-down clips, splice plates, support systems, barrier strips, covers, hinged horizontal and vertical splice plates, elbows, reducers, tees, crosses, etc.

**4.2** Standard cable tray fittings shall be assembled by the manufacturer. Adjustable fittings may require some field adjustment.

**4.3** Splice plate fasteners shall be fiberglass encapsulated stainless steel. Fasteners shall be designed to prevent encroachment of liquids or vapors on the metal threads when fully assembled and tightened. Fasteners must be capable of withstanding a torque of 10 ft./lbs. without damage to the threads of encapsulated coating.

**4.4** Manufacturer shall provide certified test data to verify compliance with above loading and deflection data when requested by the purchaser.

**4.5** Witness tests may be specified by the customer and shall be scheduled at the time of purchase. Documentation shall also be specified at the time of purchase.

**4.6** Special non-standard tests, if requested, shall be specified at the time of purchase.

**1. Scope**

**1.1** This specification covers the requirements for the Aickinstrut Non-Metallic Channel Framing System.

**2. Material**

**2.1** FRP channel shall be of pultruded glass reinforced polyester or vinyl ester resin having the physical property values listed in this catalog.

**2.2** PVC channel shall be of extruded polyvinyl chloride having the physical property values listed in this catalog.

**2.3** Some accessories shall be of injection molded, 40% long glass fiber reinforced polyurethane, polypropylene or nylon.

**3. Composition**

**3.1** Glass reinforced channel shall have a synthetic surfacing veil applied on exterior surfaces to improve weatherability and inhibit ultraviolet degradation.

**3.2** PVC channel shall be manufactured from a UV stabilized resin and incorporate dark gray pigment to improve weatherability and inhibit ultraviolet degradation.

**4. Structural Design**

**4.1** Channel shall incorporate Aickinstrut's flange profile design which allows full and positive

interlocking contact of channel accessories and prohibits premature flange failure from torqued accessories.

**4.2** Channel profile dimensions shall be: 158" X 158" X 14", and 112" x 118" x 18".

**4.3** All 158" x 158" channel profiles shall have a minimum pull out resistance of 1000 pounds when load is applied over a 38" long section of the inside flanges.

**4.4** Channel section lengths shall be supplied in 10' or 20' lengths (+ or -18").

**4.5** Universal Pipe Clamps shall have full interlocking contact with interior channel flanges to maximize pull-out resistance and be adjustable to accommodate a minimum 3/4" variance in piping or conduit O.D. sizes.

**5. Standards**

**5.1** Glass reinforced and PVC channels covered in this specification shall have a flame spread rating of 25 or less when tested per ASTM E84 and meet the requirements of UL 94VO thereby qualifying them as Class 1 material in the Uniform Building Code.

**5.2** Glass reinforced channels covered in this specification shall comply with

**AICKINSTRUT® SPECIFICATIONS**

the requirements of ASTM D 3917 and ASTM D 4385 which govern the dimensional tolerances and visual defects of pultruded shapes.

**6. General**

**6.1** Aickinstrut Non-Metallic Framing Channel shall be furnished as a system which includes all the necessary fasteners, channel splice plates, brackets, sealants, hangers, pipe clamps, etc.

**6.2** Non-Metallic fasteners shall be manufactured from long glass fiber reinforced polyurethane to ensure maximum strength and corrosion resistance.

**6.3** All components of the Aickinstrut Framing System shall be nonmetallic except where 316 stainless steel hardware is used as part of the assembly.

**6.4** Aickinstrut® is manufactured by Aickinstrut, a subsidiary of Atkore International, Harvey, IL, 1-800-882-5543.

**6.5** The manufacturer shall not have had less than 10 years experience in manufacturing strut systems.

**6.6** All products are manufactured in the United States of America.

# COPE-GLAS™ CABLE TRAY SYSTEM

## CONSTRUCTION AND PHYSICAL PROPERTIES

### The Pultrusion Process

The pultruded structural component is made by reinforcing a polymer resin (usually polyester or vinyl ester resin) with multiple strands of glass filament and alternating layers of glass mat.

The glass is drawn through the liquid resin, which coats and saturates the fibers. The combination of resin and glass is then continuously guided and pulled (pultruded) through a heated die that determines the shape of the component.

In the die, the resin is cured to form a permanent, reinforced part which can be cut to a specific length. Since the hardened fiberglass pultrusion is reinforced with an internal arrangement of permanently bonded continuous glass fibers, it possesses great strength. In addition to strength, pultruded fiberglass components exhibit exceptional corrosion resistance. This attribute makes fiberglass the material of

choice for many harsh industrial applications.

### Resin Systems

Polyester and vinyl ester resin systems are available. The vinyl ester resin system is somewhat stronger and is applied in severe corrosive applications.

Both resin systems are flame retardant, conforming to ASTM E84, Class 1 flame rating and are self extinguishing per the requirements of UL94V-0.

Consult the corrosion resistance guide on pages 190 - 191 to determine the correct resin system for your application.

### Low Smoke Resin Systems

Increasingly stringent standards regarding flame retardancy and smoke and fume emissions have necessitated the development of alternatives to standard polyester and vinyl ester resin systems. One of these alternatives, Modified Acrylic Resin (MODAR®), offers

comparable or superior physical/mechanical properties plus low smoke and fume emissions. MODAR® resin cable tray provides the following advantages over polyester and vinyl ester tray:

- Excellent flame retardancy
- Low smoke emissions
- Low levels of toxic combustion products MODAR® cable tray meets the following specifications:

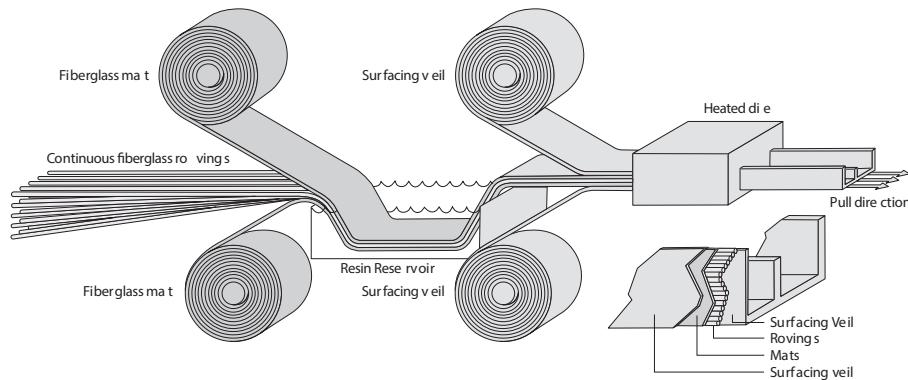

### MODAR® CABLE TRAY MEETS THE FOLLOWING SPECIFICATIONS:

Test Method	Result
ASTM E-84	< 25
ASTM E-162	10
radiant panel	@1.5 minutes = 5
ASTM E-662	@4.0 minutes = 50
smoke generation	maximum = 200
UL94	V-0

The foregoing list of properties was derived from laboratory data using coupon test specimens cut from pultruded sections. Such information should only be used as a general guide in design. Many actual components (such as cable tray side rail) take advantage of the flexibility of the pultrusion process and are selectively reinforced to enhance performance in a particular load axis. The factory should be contacted for specific information on any given component.

**Aickinstrut Fiberglass Threaded Rod Material Properties** Threaded rod is a proprietary combination of fiberglass and Class I vinyl ester flame retardant resin.

**AICKINSTRUT FIBERGLASS THREADED ROD MATERIAL PROPERTIES**

Stud weight (lb./ft.)	0.076	0.129	0.209
Flammability	Self extinguishing per UL94V-0		

# COPE-GLAS™ CABLE TRAY SYSTEM

## APPLICATION ENVIRONMENTS

### Corrosion Resistance

In most applications COPE-GLAS cable tray is used because of its superior corrosion resistance. The following corrosion resistance guide offers performance recommendations for the most common environments.

Additional data for less common environments are also available from the factory.

### Corrosion Resistance Guide

The general guidelines presented in this table take into consideration the normal applications of cable tray products and accessories where exposure to harsh chemicals is limited to fumes or vapors and occasional splashes at ambient temperatures. This information is provided as a guide only since it is impossible to anticipate every conceivable application. For specific applications, which may fall outside the scope of these guidelines, it is recommended that the factory be consulted directly.

Special applications may require a screening test of material samples in the chemical environment of interest.

**Notes:**

**S** - indicates satisfactory performance.

**NR** - indicates not recommended for use. However, acceptable performance may be provided if fumes are not highly concentrated.

**NA** - indicates information not available.

# COPE-GLAS™ CABLE TRAY SYSTEM

## STRUCTURAL DESIGNS

### COPE-GLAS™ Cable Tray Styles

COPE-GLAS cable tray systems are available in flange-out and flange-in styles. Standard tray, Type CZ and Type CZD deep tray are flange-out designs. Type LC Low Profile tray and standard tray Types BE and CE are flange-in designs.

The "Z" siderail profiles allow for easier cable loading and cover attachment or removal. COPE-GLAS basic "Z" rail profiles provide four inches of cable fill depth and are available in one load classification: CZ.

COPE-GLAS "Deep Z" profile tray, Type CZD, provides six inches of cable fill depth and is only available in NEMA load class "C".

COPE-GLAS Style "E" siderail profiles are flange-in designs that

are especially useful when space is a consideration, such as on closely spaced parallel runs or flush wall mountings. COPE-GLAS "E" rail profile provides four inches of cable fill depth and is available in NEMA load classes "C" as BE and CE.

The Low Profile cable tray, Type LC, is an "E" siderail profile that has a three inch cable loading depth. Type LC cable tray is ideal for control wiring and lighter cable runs that do

not require numerous circuits. All COPE-GLAS cable trays have a 1.5 safety factor that meets the NEMA FG 1 safety factor requirement of 1.5 times the allowable working load.

COPE-GLAS cable tray is also available with a solid bottom upon request. Solid bottom tray consists of a standard ladder tray with a flat fiberglass cover material bonded to the bottom of the tray.

## PERFORMANCE STANDARDS AND CLASS DESIGNATIONS

Tray Type	Class	Working Load (20' Span)	Safety Factor
LC Low Profile	A	50 lbs./ft. (12' span)	1.5
BE Standard	C	100 lbs./ft.	1.5
CZ Standard	C+	133 lbs./ft.	1.5
CE Standard	C+	133 lbs./ft.	2
CZD Deep	C+	133 lbs./ft.	1.5

## SELECTION GUIDE

Several criteria must be considered in selecting COPE-GLAS cable tray for your application. Factors include load capacity and safety factor; support spans; deflection; cable diameter and tray fill capacity; application environment; space restrictions; fire resistance; future expansion and cost.

Article 392 of the National Electric Code provides cable size and cable fill information. NEMA Standards Publication No. FG 1, Fiberglass Cable Tray Systems, specifies manufacturing standards, performance standards, load class designation specifications and application information such as support span guidelines and temperature deflection information. The following guidelines will assist you in your selection of COPE-GLAS cable tray:

### Step 1:

Determine the resin system required based on the application, location, and environment (consult the corrosion resistance guide in the Application Environments section). COPE-GLAS cable tray is available in polyester and vinyl ester resin systems. Vinyl ester provides more corrosion resistance than polyester in some environments.

### Step 2 :

Determine tray loading depth and width. Depending on the size and number of cables needed, use the guidelines in NEC Article 392-8 through -12 to determine tray loading depth and width.

### Step 3 :

Determine rung spacing. The smallest cable or wire bundle determines the rung spacing for ladder type trays. In general, use eighteen inch rung spacing for 2" O.C. or larger, nine or twelve inch rung spacing for cables from 1" to 2" O.D., six inch run spacing for cables from 1/2" to 1" O.D. and fiberglass channel type trays for smaller cables.

### Step 4 :

Determine the cable load. Calculate in pounds per linear foot the load of the cables to be supported. Consider any extraneous loads such as ice, snow, wind, etc. and add this value to the cable load.

### Step 5 :

Determine the tray style. COPE-GLAS offers two side rail configurations; "E" and "Z".

Refer to the Structural Designs section of this catalog to determine tray style.

### Step 6 :

Determine the support spacing. Normally, cable tray systems are supported at eight foot to twenty foot intervals. Tray may be supported by wall mount brackets, trapeze suspensions, supports from existing structures or it may be floor mounted to minimize deflection.

Splice joints should be placed at or near the quarter point of the span. This guideline should be rigidly followed and non-compliance granted only after careful engineering analysis because of high cable tray stresses which can be generated.

### Step 7:

Determine the NEMA or CSA load class. The cable tray system should be determined by the combination of cable load (Step 4) and support spacing (Step 5). Consult the Structural Design section of this catalog or NEMA FG 1 to assist you in the selection of a tray system that meets your requirements.

NEMA Class	Working Load*
A	50 lbs./lin. ft.
B	75 lbs./lin. ft.
C	100 lbs./lin. ft.

\* Working load classifications based on 20 foot support spans. Chart not applicable for channel tray.

## INSTALLATION PROCEDURES

The following information shall be used as a guideline for installing COPE-GLAS cable tray.

**Special Considerations**

With few exceptions, the installation of fiberglass cable tray does not differ from that of metal tray. All standard installation practices and procedures apply. In general, special handling is not required.

**Tools Required**

Fiberglass tray is easy to cut and drill. For most installations, standard tools are sufficient; however, for large jobs where many sections require cutting and drilling, high speed steel tools may become dull due to the abrasiveness of glass. In such installations, the use of carbide tipped drills and abrasive (grit) saw blades is recommended.

**Cutting Tray in the Field**

Tray may be easily cut in the field using a standard hacksaw. If some type of power saw is used, abrasive grit-blades work best. When using a power saw, dust filter masks should be worn. Gloves and long sleeve clothing are also recommended.

**Sealing Edges**

All cut edges should be sealed with FIBER-SEAL, Atkore International's sealant compound. FIBER-SEAL is clear, dries fast and is easy to use. In harsh environments, proper sealing insures against future migration of corrosive elements into the cut sections.

**Drilling Holes for Splice Plates**

When drilling holes for splice plates, a  $\frac{1}{32}$ " drill bit will provide a properly sized hole. Clamp a splice plate (using a C-clamp) to the side of the tray and use this plate as a drilling template. The plate should be positioned to allow a  $\frac{1}{16}$ " gap between joined side rails or fittings.

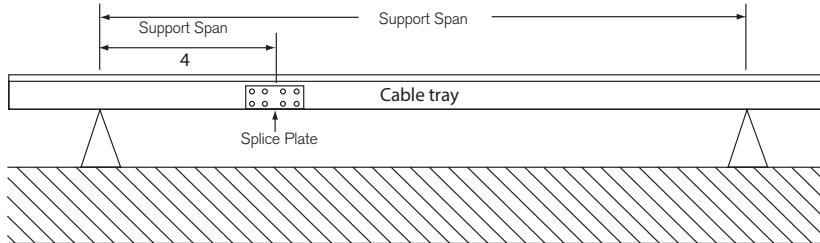

**Use of Encapsulated Hardware**

Tray sections should be joined using COPEGLAS fiberglass encapsulated stainless steel nuts and bolts (Part #FECNBSS). For maximum protection in extremely harsh environments, apply a generous amount of FIBER-SEAL to the nut and bolt (inside surfaces and threads) just prior to assembly. Assembled splice joints should be tightened to approximately 12 ft/lbs.

**Locating Splice Joints**

When possible, splice joints should be placed at or near the quarter point of any given support span. This is the point of least

Splice plate joints should be located as close as possible to the quarter point of the support span.

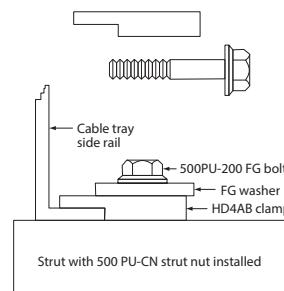

mechanical stress. For example: with a section of tray resting on supports spaced 20 feet apart, the splice plate joints should be located 5 feet from supports (support span divided by 4).

**Expansion Splice Plates**

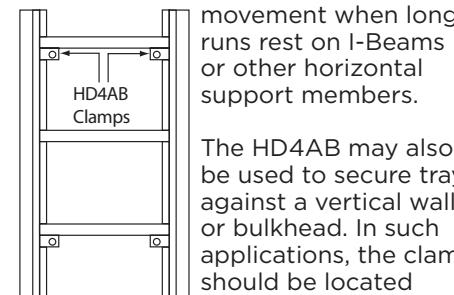

Each COPE-GLAS expansion splice plate allows 58" total expansion or contraction under varying temperature conditions. A complete table showing expansion plate placement intervals appears in the COPE-GLAS Accessories section of this catalog.

**Clamping & Securing Cable Tray**

COPE-GLAS provides a special hold down clamp (Part #HD4AB which

grips the bottom flange of the tray and prevents lateral movement. This clamp is commonly used to prevent lateral tray movement when long runs rest on I-Beams or other horizontal support members.

The HD4AB may also be used to secure tray against a vertical wall or bulkhead. In such applications, the clamp should be located adjacent to and below a rung for extra support. When securing tray to a flat vertical bulkhead, it is also acceptable to drill and bolt directly through the bottom flange of the tray. Holes should

be centered in the flange and kept as small as possible (3/8" diameter max).

**Wall Brackets**

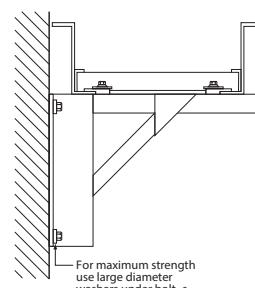

COPE-GLAS fiberglass wall brackets may be used to support cable tray adjacent to a vertical wall. Wall brackets are rated at 750 pounds total weight bearing capacity with a safety factor of 3.0.

Bracket spacing may be determined by dividing 750 lbs. by the tray load (in pounds per foot).

**Example:** With a cable tray loading of 100 lbs/ft., divide 750 lbs. by 100 lbs./ft. = 7.5 feet. One bracket will be required every 7 1/2 feet.

Tray may be secured to the bracket with HD-4 clamps. Note that the brackets are fabricated using Aickinstrut as the main horizontal support member.

Aickinstrut provides a channel nut (Part #500PU-CN) which fits the interior of the strut. This nut, used in conjunction with a fiberglass bolt (Part #500PU-200), washer (Part #WR500) and HD4AB hold down clamp, forms a complete clamping system. Over-torquing should be avoided (3 ft/lbs max).

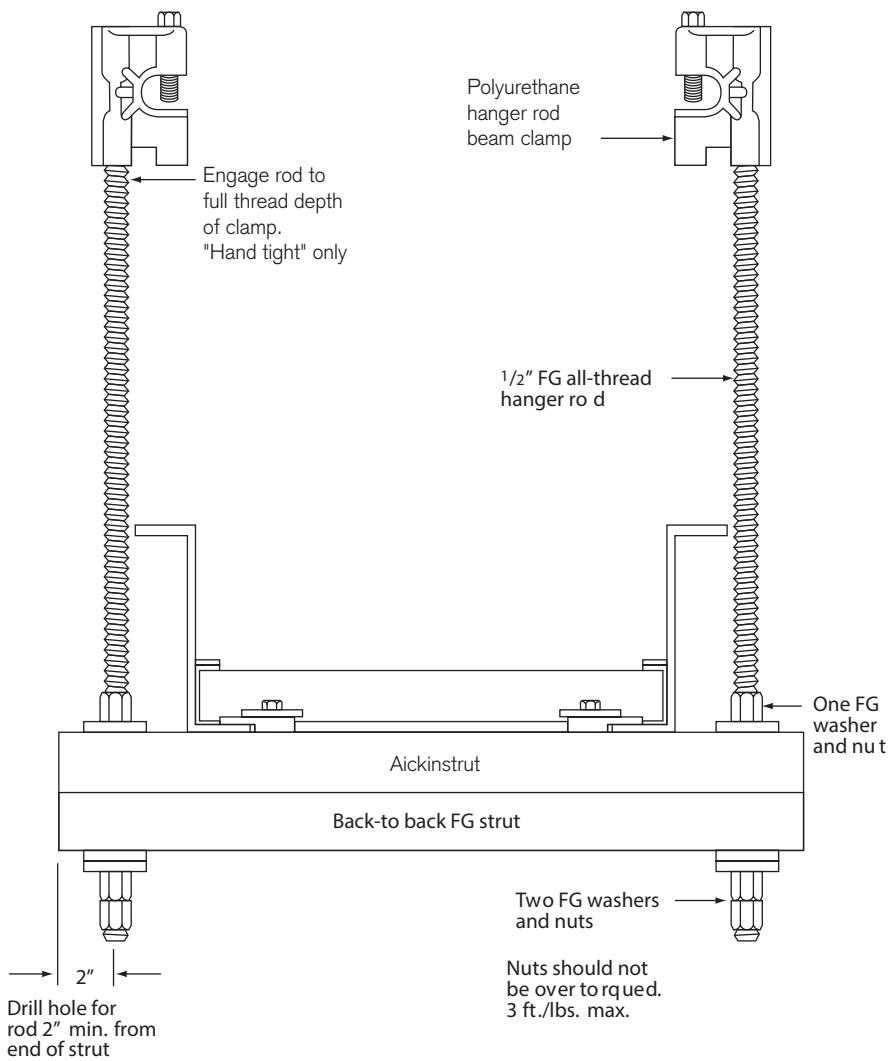

# COPE-GLAS™ CABLE TRAY SYSTEM

## INSTALLATION PROCEDURES

### Trapeze Hanging Systems

The fiberglass trapeze hanging system pictured below may be used to support tray in areas where tray cannot be placed on I-beams or other existing structures. Trapeze hangers are assembled in the field using components from this catalog. Care should be taken to configure the hanger as shown.

When properly assembled, the hanger, pictured below, can support 1000 lbs. with a safety factor of 4 (assuming a balanced load). For NEMA Class C Tray rated at 100 lbs./ft., we recommend a minimum of one hanger for every 10 feet of tray (1000 lbs. divided by 100 lbs./ft. = 10 ft.).

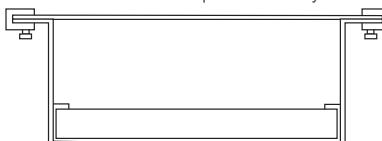

As with the fiberglass wall bracket, HD-4 clamps and associated hardware may be used with these Trapeze Systems.

When trapeze hangers are suspended from I-beams using polyurethane beam clamps, it is imperative that the fiberglass all-thread rod be screwed completely into the clamp until it "bottoms out". Achieving full pull out strength requires total thread engagement. Care should be taken not to over torque the rod.

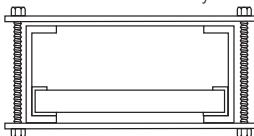

### COPE-GLAS Cover Installation Procedure

Nylon Drive Rivets (Part #NDR1) are the most economical method to fasten cable tray covers, but they require 1/4" field drilled holes on 24" centers along both siderails.

CC1 cover clamp for Z-Rail tray

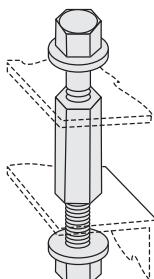

CCE wrap around cover clamp for Low Profile and E-Rail trays

If cover removal or high winds are a concern, either the CC1 or CCE cover clamp may be desired. The CC1 clamp is designed for use on "Z" Style siderail tray and fittings. This PVC coated steel cover clamp requires no field drilling and is easily removed to allow ready access to the inside tray and cables. Six CC1 clamps are recommended for each ten foot length of cable tray cover. The CCE clamp is designed for use with flat cover on Low Profile and "E" Style siderail trays and fittings. The CCE clamp is constructed entirely of fiberglass components and is available in either polyester or vinyl ester resin. Two CCE clamps are recommended for each ten foot length of cable tray cover.

Cover stand-off  
SO 200

Cover stand-offs secure cable tray cover while providing a ventilation gap for cables. The SO200 requires field drilling. Five pairs of clamps are recommended per ten foot length of cable tray cover.

## INSTALLATION PROCEDURES

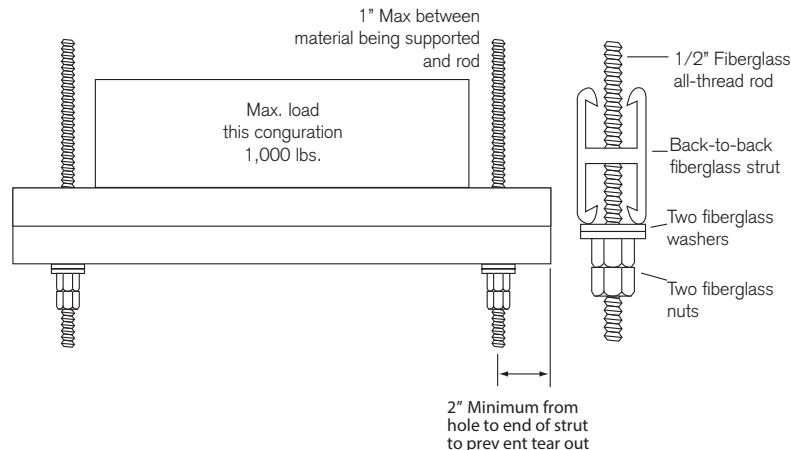

Installation Guidelines:  
Fiberglass Trapeze Hanging Systems  
The COPE-GLAS cable tray system

offers three types of fiberglass trapeze hanging systems: back to back strut trapeze, single strut with open end down trapeze,

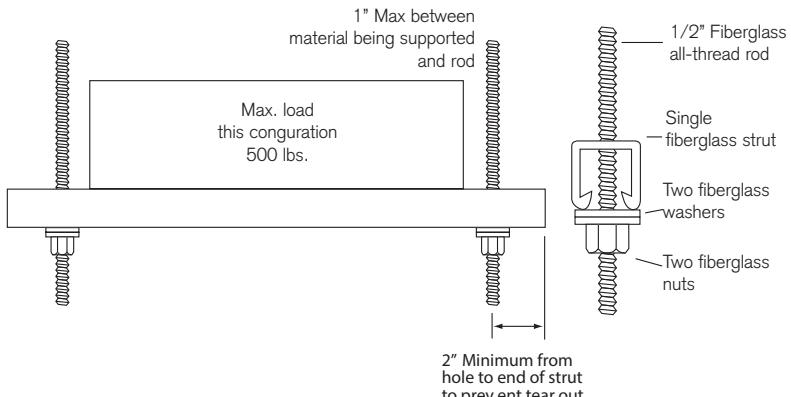

and single strut with open end up trapeze. The specifications associated with each trapeze type are shown below.

**Back-to-Back Bonded Strut**

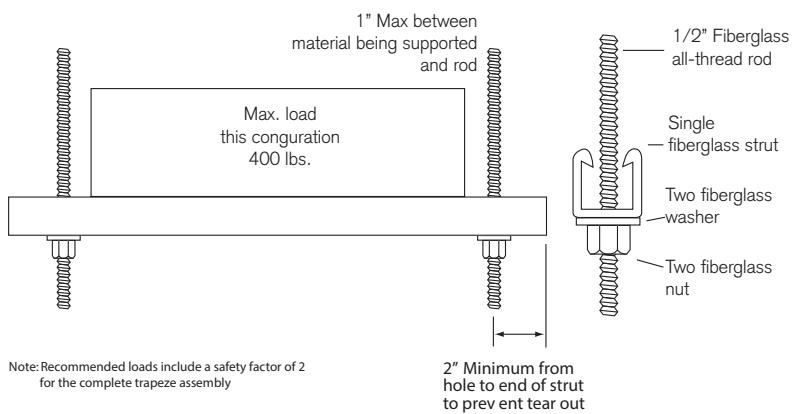

1. Fiberglass nuts should not be over-torqued. A snug 3 to 4 ft./lbs. is sufficient.
2. When supporting a 100 lb./ft. load, the spacing between each trapeze should not exceed ten feet. Under these conditions, each trapeze will be supporting 1000 lbs., thus yielding a support system safety factor of 2.
3. When using beam clamps, only COPE-GLAS RGBC series clamps are acceptable. This clamp provides more thread engagement than clamps designed for steel rod and load ratings are dependent on the extra thread engagement. Care should be taken to insure that the rod is fully engaged in the clamp nut, but not over torqued (5 ft/lbs. max.).
4. Material being supported should "fit" the trapeze system as closely as possible. The spacing between the all-thread rod and the material being supported should not exceed 1".

**Single Strut With Open End Down**

1. When supporting a 100 lb./ft. load, the spacing between each trapeze should not exceed five feet. Under these conditions, each trapeze will be supporting 500 lbs., thus yielding a support system safety factor of 2.
2. When using beam clamps, only COPE-GLAS RGBC series clamps are acceptable. This clamp provides more thread engagement than clamps designed for steel rod and load ratings are dependent on the extra thread engagement. Care should be taken to insure that the rod is fully engaged in the clamp nut, but not over torqued (5 ft/lbs. max.).
3. Material being supported should "fit" the trapeze system as closely as possible. The spacing between the all-thread rod and the material being supported should not exceed 1".

**Single Strut With Open-End Up**

1. To maintain a safety factor of 2, the load for this configuration should not exceed 400 lbs.
2. When using beam clamps, only COPE-GLAS RGBC series clamps are acceptable. This clamp provides more thread engagement than clamps designed for steel rod and load ratings are dependent on the extra thread engagement. Care should be taken to insure that the rod is fully engaged in the clamp nut, but not over-torqued (5 ft/lbs. max.).
3. Material being supported should "fit" the trapeze system as closely as possible. The spacing between the all-thread rod and the material being supported should not exceed 1".

## STRAIGHT SECTIONS

### PART NUMBERING SYSTEM

All cable tray straight sections are available in polyester or vinyl ester resin. Standard tray lengths are 10' and 20'. Special tray lengths are available upon request.

Cable tray sections, except for Low Profile Type LC, can be provided with fiberglass strut substituted as alternating rungs upon request at no additional cost. Solid bottom cable tray sections are available,

but require special quotation.  
All cable tray sections are supplied pre-drilled to accept splice plate fasteners.

Note: Connector plates and hardware are not included and must be ordered separately.

#### Ordering Information:

[S][W][R][L] [V]\*[SR]\*

Tray Style (LC, BE, CE, CZ, CZD)

Width (6", 9", 12", 18", 24", 30", 36")

Rung Spacing (6", 9", 12", 18")

Suffix

[V]\*[SR]\*

SR=Strut as Alternating Rungs

MR=Marine Rungs

Vinyl Ester Resin

Length (10', 20')

Example: CZ181220VSR

CZ Style Tray, 18" Wide, 12" Rung Spacing, 20' Long

Vinyl Ester Resin, with Alternating Strut Rungs.

\* Add suffix "V" to specify vinyl ester resin, add "SR" to specify strut as alternating rungs, add "MR" for marine rungs

Note: See page 200 for cable tray straight section cover options and part numbers.

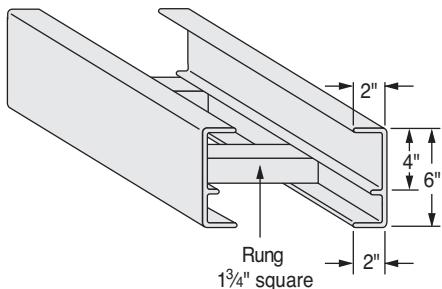

## STRAIGHT SECTIONS

## TYPE CE STRAIGHT SECTION - E PROFILE [CE]

**NEMA Class 20C+**  
**(133 lbs./ft. Working Load - 20' length)**

See ordering information on previous page

\* 2:1 Safety Factor

# COPE-GLAS™ CABLE TRAY SYSTEM

## COVERS

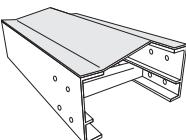

### COPE-GLAS CABLE TRAY COVERS

Covers are used where cable protection is necessary or desired. Two COPE-GLAS cover designs, flat and peaked, are offered. The flat cover suits most applications and is more widely used; however, where the accumulation of snow or other particulate is likely, the peak cover will help shed excessive loads on the cable tray system. Flat covers are available in polyester or vinyl ester resin and are offered in ten foot lengths. To specify vinyl ester resin, add the suffix "V" to the part number. Peaked covers are made from polypropylene and are supplied in black. Peaked covers are not available for COPE-GLAS fittings.

Installation procedures for covers are located in the Installation Procedures Section of this catalog.

Flat Cover

Peaked Cover  
Note: 5' Lengths only

#### FLAT COVER FOR "Z" SHAPED PROFILE SIDERRAIL

Tray Width	Polyester Resin	Vinyl Ester Resin	Wt./Ft.

## FITTINGS

All types and widths of tray are available as fittings with the COPE-GLAS Cable Tray System. All fittings are pre-drilled at the factory to accept splice plate fasteners. Rung spacing specified in the tray straight sections does not necessarily apply to fittings.

### Molded Fittings

Type LC Low Profile and Type "BE" & "CE" tray fitting side rails are resin transfer molded with smooth radius corners. Smooth radius fittings are compact and the curved rail shape is an aid for cable pulling. The following fittings are available in smooth radius:

### Type LC Smooth Radius Fittings

90° Inside Vertical Assemblies  
90° Outside Vertical Assemblies  
90° Horizontal Bend Assembly,  
All 12" width, 12" radius  
Vertical Tee Assemblies  
Horizontal Tee Assemblies  
Horizontal Cross Assemblies

### Type BE and CE Smooth Radius Fittings

90° Inside Vertical Assemblies,  
12" & 24" radius  
90° Outside Vertical Assemblies,  
12" & 24" radius  
90° Horizontal Bend Assemblies  
24" & 36" width, 12" radius  
06", 09", 12", 18", & 24" width,  
24" radius  
Vertical Tee Assemblies  
12" & 24" radius  
Horizontal Tee Assemblies  
12" & 24" radius  
Horizontal Cross Assemblies  
12" & 24" radius

### Type CZ , 24" Radius Molded Fittings

Type CZ tray 24" radius fittings are compression molded with a NEMA Load Class C rating. All 24" radius fittings will be molded unless otherwise specified. Molded fittings are stocked for quick shipment. They are also dimensionally consistent to assure a precise fit at the job site.

90° Inside & Outside Vertical  
90° Horizontal  
90° Horizontal Tee  
Horizontal Cross

### Mitered Fittings

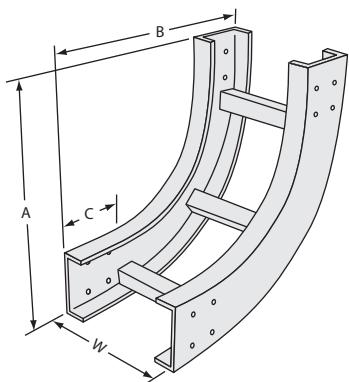

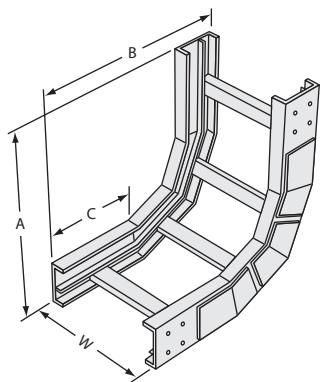

All 12" and 36" radius assemblies and reducing assemblies for CZ and CZD trays are fabricated from cut and mitered side rail sections. All BE and CE tray, 36" radius fittings and horizontal bends (with the exception of those listed in the molded fittings text) will also be mitered.

### Custom Fittings

Factory engineering support will help with your special requirements; 30° and 60° bends along with other special fittings are available upon request.

### Cable Tray Fitting Part Numbering System

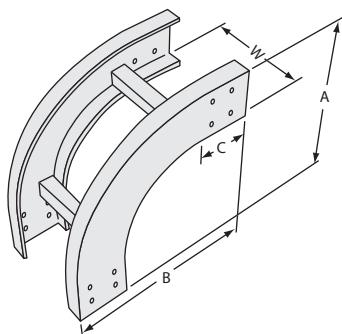

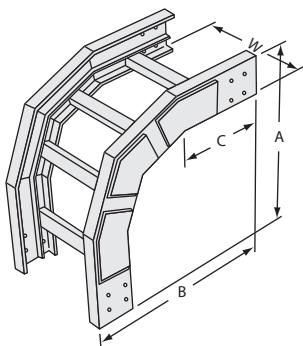

With each fitting drawing, there is an example of how to create the correct part number for the fittings and its cover. Alternating strut and rungs can be provided by using the suffix "SR".

#### Vertical inside/Outside Bends - Part Numbering System

The following information will help you order vertical bends for your application. Special fittings are available upon request. Strut as rungs can be provided every other rung at no additional cost. Solid bottom fittings are available through special quotation. Smooth radius vertical bends are available for Type LC, BE, and CE cable trays in 12" and 24" radius. All Type CZ and CZD fittings will be mitered as will BE and CE 36" radius fittings.

#### Ordering Information Fittings:

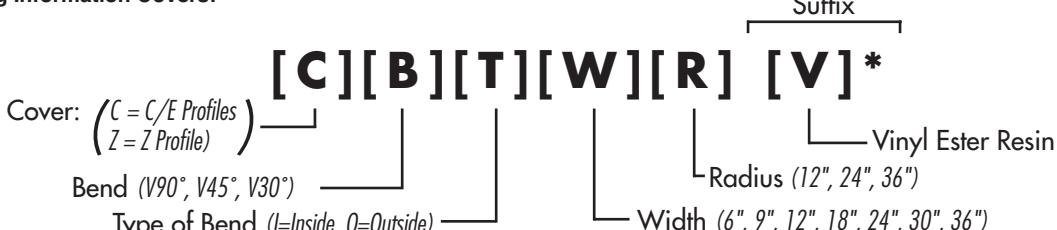

Example: CZV90I2412VSR

CZ Style Tray, 90° Inside Vertical Bend, 24" Wide, 12" Radius,  
Vinyl Ester Resin, With Alternating Strut Rungs.

\* Add suffix "V" to specify vinyl ester resin, add "SR" to specify strut as alternating rungs,  
add "MR" to specify Marine Rungs

#### Ordering Information Covers:

Example: ZV90I2412V

Cover Style Z, 90° Inside Vertical Bend, 24" Wide, 12" Radius, Vinyl Ester Resin.

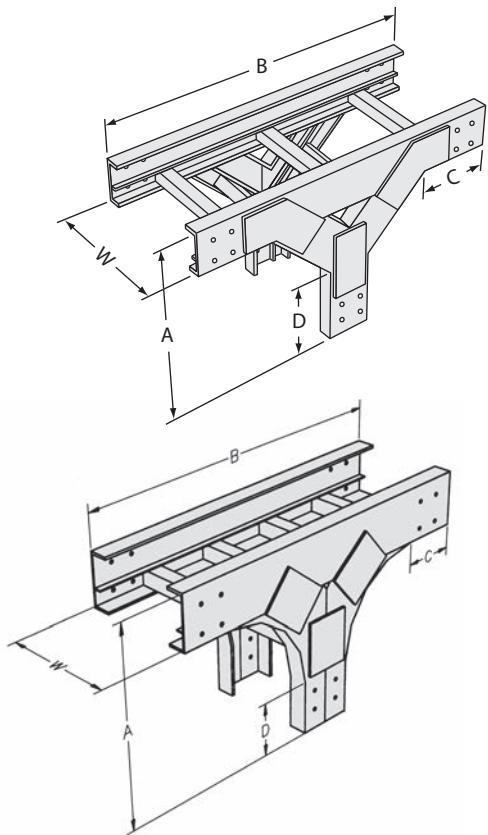

\* Add suffix "V" to specify vinyl ester resin

# COPE-GLAS™ CABLE TRAY SYSTEM

## FITTINGS

### HORIZONTAL BENDS - PART NUMBER SYSTEM

The following information will help you order horizontal bends for your application. Special fittings are available upon request. Strut rungs can be provided every other rung at no additional cost. Solid bottom fittings are available through special quotation. Smooth radius bends are available in the following tray sizes:

**LC** 90° Horizontal Bend, 12" width, 12" radius

**BE & CE** 90° Horizontal Bend, 24" and 36" width, 12" radius

**BE & CE** 90° Horizontal Bend, 6", 9", 12", 18", 24", and 30" width, 24" radius

Ordering Information Fitting:

[S][H90][W][R] [V]\*[SR]\*

Tray Style (LC, BE, CE, CZ, CZD)

Horizontal Bend (90°, 45°, 30°)

Example: CE45H3624V

CE Style Tray, 45° Horizontal Bend, 36" Wide, 24" Radius,  
Vinyl Ester Resin, with Alternating Strut Rungs.

Width (6", 9", 12", 18", 24", 30", 36")

Suffix

Vinyl Ester Resin

LSR=Strut as Alternating Rungs

MR=Marine Rungs

Radius (12", 24", 36")

\* Add suffix "V" to specify vinyl ester resin, add "SR" to specify strut as alternating rungs,  
add "MR" to specify Marine rungs

Ordering Information Covers:

[C][H90][W][R] [V]\*

Cover: (C = C/E Profiles)  
(Z = Z Profile)

Horizontal Bend (90°, 45°, 30°)

Example: C45H3624V

C Style Cover, 45° Horizontal Bend, 36" Wide, 24" Radius, Vinyl Ester Resin

Suffix

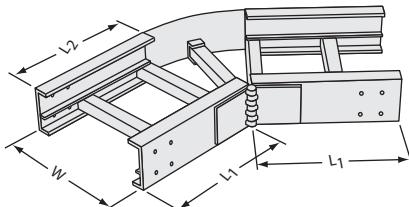

Vinyl Ester Resin

Radius (12", 24", 36")

Width (6", 9", 12", 18", 24", 30", 36")

\* Add suffix "V" to specify Vinyl ester resin

### HORIZONTAL ADJUSTABLE BENDS [HAB]

#### HORIZONTAL ADJUSTABLE BENDS [HAB]

Tray style	Angle Adjustment Range	Leg L1	Leg L2
LC	25°-65°	16 1/16" (408mm)	16 1/16" (408mm)
LC	60°-100°	16 1/16" (408mm)	16 1/16" (408mm)
CZ, CZD, BE, CE	25°-65°	18" (457mm)	18" (457mm)
CZ, CZD, BE, CE	60°-100°	18" (457mm)	18" (457mm)

#### Horizontal Adjustable Bends Part Number System

This versatile fitting is offered in two designs to accommodate a full range of adjustment.

Style "A" design is adjustable from 25° to 65°.

Style "B" design is adjustable from 60° to 100°.

The range of adjustment must be specified when ordering this fitting. Strut rungs can be provided every other rung at no additional cost. Horizontal adjustable bends are available in all tray widths except 6".

Ordering Information Fittings:

[S][HAB][W][A] [V]\*[SR]\*

Tray Style (LC, BE, CE, CZ, CZD)

Horizontal Adjustable Bend

Example: BEHAB12BP

BE Style Tray, Horizontal Adjustable Bend, 12" Wide,  
60° to 100° Adjustment Range, Polyester Resin.

Suffix

Vinyl Ester Resin

SR=Strut as Alternating Rungs

MR=Marine Rungs

Adjustment Range (A: 25° to 65°, B: 60° to 100°)

Width (6", 9", 12", 18", 24", 30", 36")

\* Add suffix "V" to specify vinyl ester resin, add "SR" to specify strut as alternating rungs,  
add "MR" for Marine Rungs

Ordering Information Covers:

[C][HAB][W][A] [V]\*

Cover: (C = C/E Profiles)  
(Z = Z Profile)

Horizontal Adjustable Bend

Example: CHAB12BP

C Style Cover, Horizontal Adjustable Bend, 12" Wide, 60° to 100° Adjustment Range, Polyester Resin

Suffix

Vinyl Ester Resin

Adjustment Range (A: 25° to 65°, B: 60° to 100°)

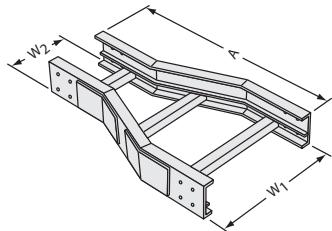

Width (6", 9", 12", 18", 24", 30", 36")

\* Add suffix "V" to specify Vinyl ester resin

# COPE-GLAS™ CABLE TRAY SYSTEM

## FITTINGS / SPLICE PLATES

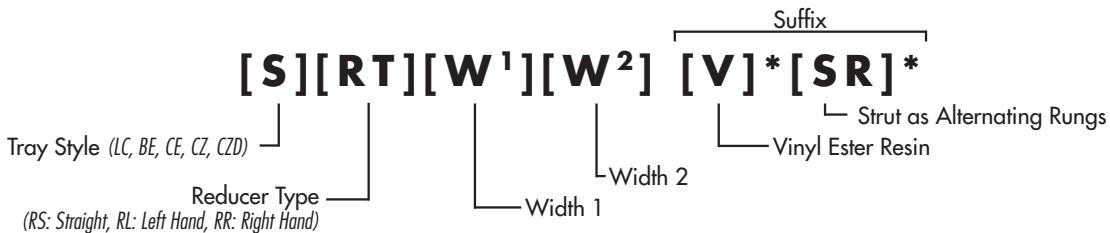

### Reducers - Part Number System

Reducers are available in three styles:

- Straight,
- Left Hand Offset
- Right Hand Offset.

Strut rungs can be provided at every other run location at no additional cost. Solid bottom fittings are available through special quotation

#### Ordering Information Fittings:

*Example: BERS2412*

*BE Style Tray, Straight Reducer, 24" Width,  
12" Width, Polyester Resin.*

\* Add suffix "V" to specify vinyl ester resin, add "SR" to specify strut as alternating rungs

#### Ordering Information Covers:

*Example: CRS2412*

*C Style Cover, Straight Reducer, 24" Width, 12" Width, Polyester Resin*

\* Add suffix "V" to specify Vinyl ester resin

## SPLICE PLATES

The COPE-GLAS Cable Tray System offers a full line of fiberglass accessories to suit any application. All accessories must be ordered individually to complete the system.

### Splice Plates

Splice plates for system assembly come in six variations designed for specific applications: straight, expansion straight, fixed angle horizontal, fixed angle vertical, horizontal adjustable and vertical adjustable. Low Profile (LC) splice plates require six  $\frac{3}{8}$ -inch fasteners while splice plates for standard and deep tray require eight  $\frac{3}{8}$ -inch fasteners. Splice plates and fasteners are sold separately and

are not provided with straight sections or fittings. The part numbers shown are for polyester splice plates. To specify vinyl ester splice plates, add the suffix "V" to the part number. All Low Profile splice plate part numbers are designated with an "L" prefix.

#### Example: LS12

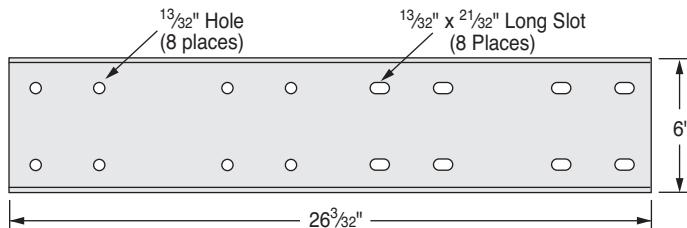

Splice plates are shown on the next page.

## SPICE PLATES

## STRAIGHT SPICE PLATES

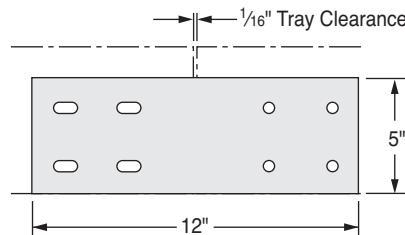

Used for tray-to-tray or tray-to-fitting connections.

## Mid Span (Part Numbers: S12-MID)

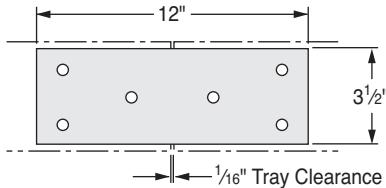

Note: The S12-MID is for use with BE and CE Style Fiberglass Cable Tray

## Standard (Part Numbers: S12)

## Low Profile (Part Numbers: LS12)

## EXPANSION SPICE PLATES

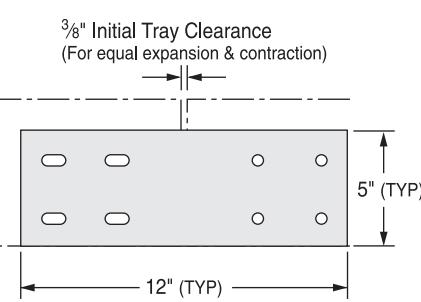

Used to accommodate thermal expansion/contraction of extended straight tray runs. The following table should be used as a guideline in determining the number of expansion splice plates needed for your application.

## EXPANSION SPICE PLATES

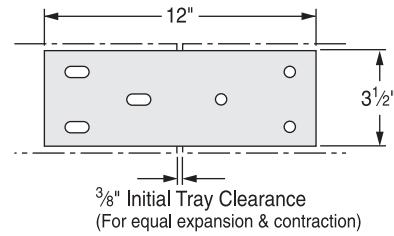

Temperature Differential Deg. F	Tray Length for 1" Expansion	Max Distance Between Expansion Splices
25°	667 ft.	417 ft.
50°	333 ft.	208 ft.
75°	222 ft.	139 ft.
100°	167 ft.	104 ft.
125°	133 ft.	83 ft.
150°	111 ft.	69 ft.
175°	95 ft.	59 ft.

The 1 inch slotted holes in each expansion connector allow  $\frac{1}{8}$ " total expansion or contraction.

## Standard (Part Numbers: ES12)

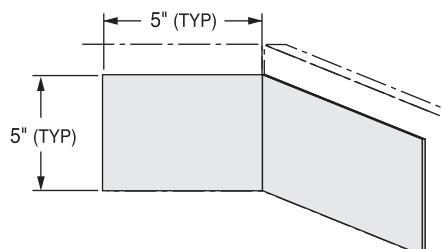

## Low Profile (Part Numbers: LES12)

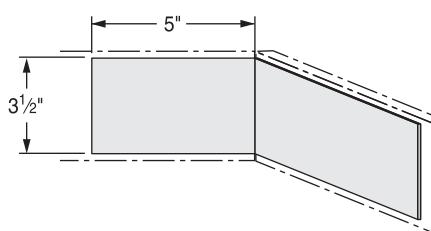

Often field situations necessitate unplanned changes in the horizontal or vertical direction of a cable tray run. Fixed angle and adjustable splice plates provide a means to make horizontal and vertical direction changes in the field. These splice plates may also be used to fabricate special fittings.

Used for 90°, 45°, and 22.5° horizontal direction changes.

## Standard (Part Numbers: H90, H45, H22.5)

## Low Profile (Part Numbers: LH90, LH45, LH22.5)

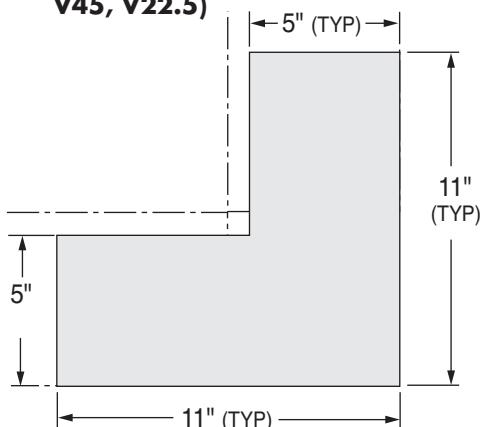

# COPE-GLAS™ CABLE TRAY SYSTEM

## SPLICING PLATES & HARDWARE

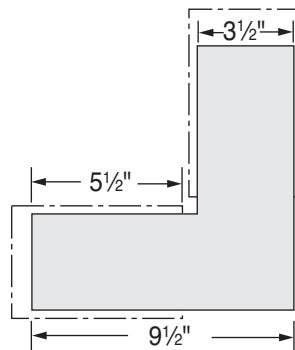

### FIXED ANGLE VERTICAL SPLICING PLATES

Used for 90°, 45°, and 22.5° vertical direction changes.

**Standard (Part Numbers: V90, V45, V22.5)**

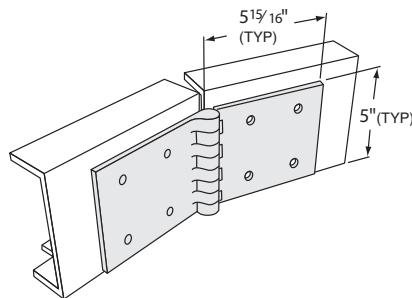

**Low Profile (Part Numbers: LV90, LV45, LV22.5)**

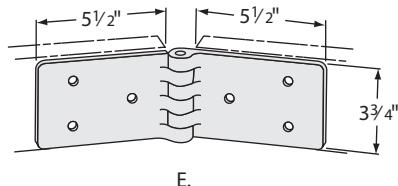

### ADJUSTABLE HORIZONTAL SPLICING PLATES

Used for variable horizontal direction changes.

**Standard (Part Number: H12)**

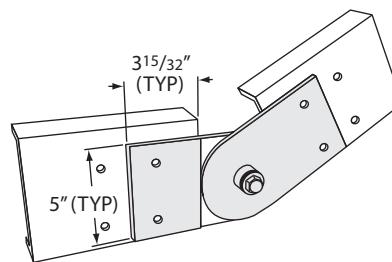

**Low Profile (Part Number: LH12)**

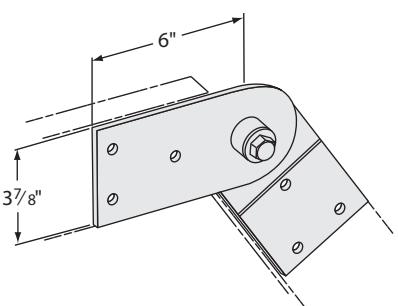

### ADJUSTABLE VERTICAL SPLICING PLATES

Used for variable vertical direction changes.

**Standard (Part Number: V12)**

**Low Profile (Part Number: LV12)**

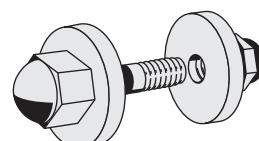

### CABLE TRAY HARDWARE

The COPE-GLAS cable tray system offers four types of splice plate fasteners; Fiberglass Encapsulated 316 Stainless Steel, Standard 316 Stainless Steel, Silicon Bronze and Monel. Each bolt set with the exception of the fiberglass encapsulated hardware includes one bolt, one nut, and two washers. The fiberglass encapsulated hardware includes molded collars which act as washers and provide a smooth sealing surface. It is recommended that all splice plate fasteners be installed with a hex head socket wrench and torqued to a maximum 15 ft./lbs.

#### CABLE TRAY HARDWARE

Part Numbers	Size	Type
FECNBSS	¾-16 x 1"	Fiberglass Encapsulated
SSNBW2-316	¾-16 x 1"	316 Stainless Steel
SBNBW2	¾-16 x 1"	Silicon Bronze
MONBW2	¾-16 x 1"	Monel

## TRAY COVERS AND ACCESSORIES

## RIVET [NDR1]

Nylon Drive Rivet is used to secure cover or barrier strip to tray.

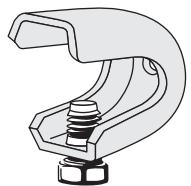

**Part Number:** NDR1

## COVER CLAMP [CC1]

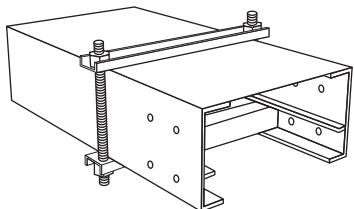

PVC coated steel cover clamp designed for use with "Z" profile tray and fittings.

**Part Number:** CC1

## COVER CLAMP [CCE]

Fiberglass cover clamp designed for use with all "E" profile trays and fittings. Available in polyester or vinyl ester. To specify vinyl ester, add suffix "V" to part number.

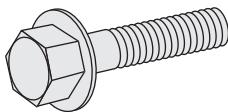

Part No.	Tray Width	Part No.	Tray Width
CCE06	06"	CCE24	24"
CCE09	09"	CCE30	30"
CCE12	12"	CCE36	36"
CCE18	18"		

## FIBERGLASS BOLT

½-13 x 2 vinyl ester hex head bolt for use with hold down clamps.

**Part Number:** 500PU-200

## HOLD DOWN PACKAGE

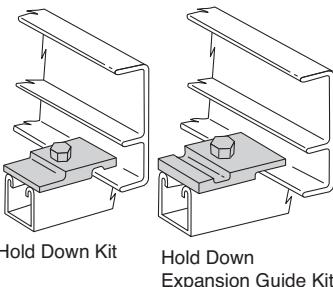

The Hold Down Package consists of the necessary components for securing COPE-GLAS tray to strut or wall brackets. The Hold Down Package includes one each of the following items; HD4AB (hold down clamp), 500PU-200 (½"-13 x 2 fiberglass bolt) and 500PU-CN (1½" strut nut). The components are also available individually. Installation procedures are located in the installation Procedures Section of this catalog

**Part Number:** HDBLTNT

## Combination Hold-Down Clamp and Expansion Guide

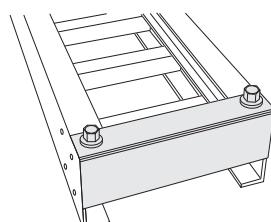

Hold-Down side secures and prevents lateral movement of cable tray while expansion side allows for thermal expansion and contraction of cable tray.

**Part Number:** HD4AB

## END PLATES

To order appropriate End Plate, see chart. To specify vinyl ester, add suffix "V" to part number (hardware not included).

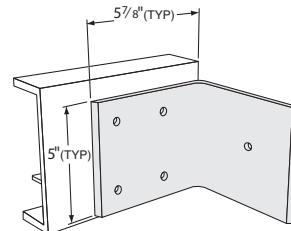

Tray Width	"LC"	"CZ"	"BE/CE"
06"	EPL06	EPZ07	EPE06
09"	EPL09	EPZ09	EPE09
12"	EPL12	EPZ12	EPE12
18"	EPL18	EPZ18	EPE18
24"	EPL24	EPZ24	EPE24
30"	EPL30	EPZ30	EPE30
36"	EPL36	EPZ36	EPE36

## FLOOR &amp; PANEL FLANGE

Available in polyester and vinyl ester resin. To specify vinyl ester, add suffix "V" to part number.

**Part Numbers:** LF400, F400

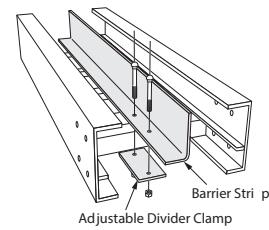

## BARRIER STRIP

Barrier strip is supplied in ten foot lengths and is intended for field installation unless otherwise indicated. For securing barrier strip to tray, we recommend the use of Nylon Drive Rivets (Part #NDR1) which require field drilling or Adjustable Divider Clamps (Part ADC1). Barrier strip is available in polyester and vinyl ester resin types. To specify vinyl ester, add suffix "V" to part number.

**Example:** RGBS4V

Tray Style	Part Number	Dimensions
Low Profile	RGBS3	3" x 2" x 3/16"
Basic	RGBS4	4" x 2" x 3/16"
Deep	RGBS6	6" x 2" x 3/16"

## ADJUSTABLE DIVIDER CLAMP

The Adjustable Divider Clamp makes locating the barrier strip a snap. The ADC is available in polyester and vinyl ester resin. To specify vinyl ester, add suffix "V" to part number. Two clamps per ten foot section of barrier strip are recommended.

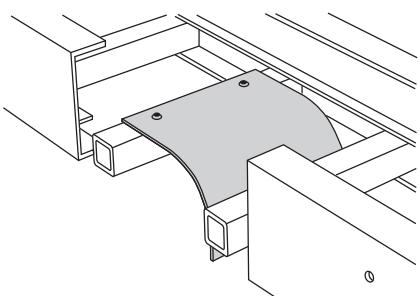

Tray Style	Part Number
Low Profile	LADC1
Basic	ADC1
Deep	ADC1

# COPE-GLAS™ CABLE TRAY SYSTEM

## ACCESSORIES

### DROP OUTS

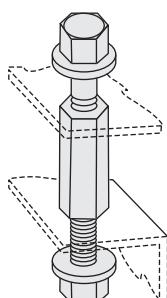

Drop Outs are easily fastened to tray rungs with two Nylon Drive Rivets (NDR1). Nylon Drive Rivets are separate order items. To specify vinyl ester, add suffix "V" to part number.

Tray Width	Part Number
06"	D006
09"	D009
12"	D012
18"	D018
24"	D024
30"	D030
36"	D036

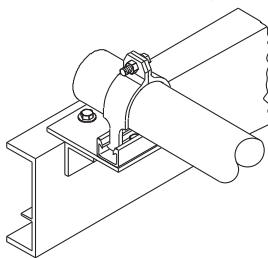

### COVER STAND-OFFS

Cover Stand-Offs secure cable tray cover to tray or fittings while providing a ventilation gap for cables. The SO200 is designed to be used with all "Z" and "E" profile cable trays. It is supplied with a threaded fiberglass stand-off and two  $3/8$ " diameter, non-metallic bolts (375PU-125). The SO200 requires field drilling. Five pairs of clamps are recommended per ten foot length of cable tray cover.

### CONDUIT TO CABLE TRAY CLAMP

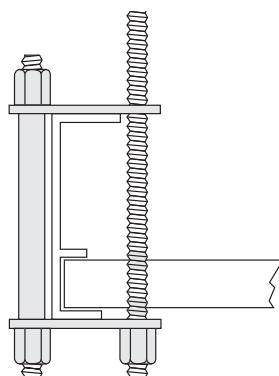

The Cope-Glas Conduit to Cable Tray Clamp allows a smooth transition for electrical conduits to Cope-Glas Cable Tray. The clamp is available in either polyester or vinyl ester and is adjustable to accommodate any entry angle. This clamp will work with all Cope-Glas tray styles. To order, specify the correct conduit size. For vinyl ester, add the suffix "V" to the part number.

Conduit Size	Part Number	Conduit Size	Part Number
$1/2$ "	CG-CCB-050	2"	CG-CCB-200
$3/4$ "	CG-CCB-075	$2\frac{1}{2}$ "	CG-CCB-250
1"	CG-CCB-100	3"	CG-CCB-300
$1\frac{1}{4}$ "	CG-CCB-125	4"	CG-CCB-400
$1\frac{1}{2}$ "	CG-CCB-150		

### TRAY FLANGE HANGER

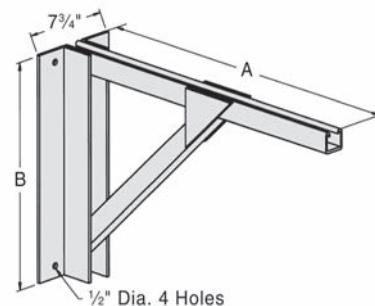

THE COPE-GLAS Flange Hanger is recommended when space requirements make conventional tray hanging and supporting methods impractical. Flange Hanger has a 375 lb. Load rating with a 2.0 safety factor. To specify vinyl ester, add suffix "V" to part number.

Part Number	Tray Style
RGFH1	Low Profile
RGFH2	E Profile

### WALL SUPPORT BRACKETS

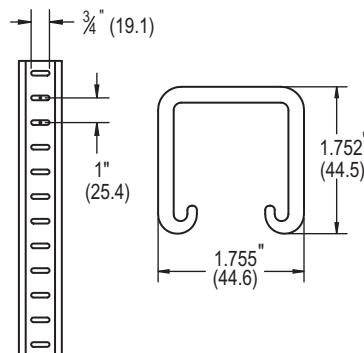

Constructed of Aickinstrut fiberglass components, Wall Support Brackets are an alternative tray hanging system. The Aickinstrut product line offers a complete line of fasteners that can be used with the wall brackets in many different tray clamping schemes. Installation guidelines for wall brackets are located in the installation Procedures Section of this catalog. To specify vinyl ester, add suffix "V" to part number.

Part No.	Tray Width	Dim. A	Dim.B
CTB06A	06"	11"(279mm)	10"(254mm)
CTB09A	09"	14"(356mm)	12"(305mm)
CTB12A	12"	17"(432mm)	13"(330mm)
CTB18A	18"	23"(584mm)	16"(406mm)
CTB24A	24"	29"(737mm)	19"(483mm)
CTB30A	30"	35"(889mm)	22"(559mm)
CTB36A	36"	41"(1041mm)	25"(635mm)

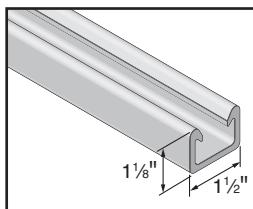

### MARINE RUNG

The marine rung may be specified for several tray components by adding MR to the part number. The marine rung is shown below.

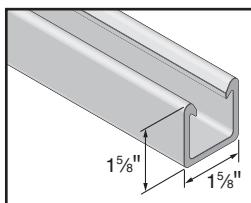

**AICKINSTRUT® SUPPORT SYSTEMS****AICKINSTRUT® CHANNEL**

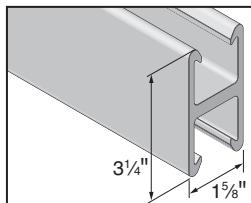

Aickinstrut is commonly used as a support system for cable tray, structural piping and electrical conduit. Aickinstrut is available in three profiles (light duty, heavy duty, and back-to-back), and can be supplied in either polyester or vinyl ester resin. Aickinstrut heavy duty and light duty channels are also available slotted (1" long x  $\frac{3}{8}$ " diameter). The standard channel lengths are ten and twenty feet but special lengths are available upon request. For load/deflection information and installation guidelines, refer to the Installation Procedures Section of this catalog.

**LIGHT DUTY CHANNEL**

Part Number	Design	Resin System
20P-1000	Solid	Polyester
20V-1000	Solid	Vinyl Ester
20P-1200	Slotted	Polyester
20V-1200	Slotted	Vinyl Ester

**HEAVY DUTY CHANNEL**

Part Number	Design	Resin System
20P-2000	Solid	Polyester
20V-2000	Solid	Vinyl Ester
20P-2200	Slotted	Polyester
20V-2200	Slotted	Vinyl Ester

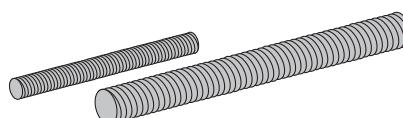

**BACK-TO-BACK CHANNEL\***

Part Number	Resin System
20P-2100	Polyester
20V-2100	Vinyl Ester

\* Add "-SL" to the part number for slotted strut.

**FIBERGLASS ALL-THREAD ROD**

Fiberglass all-thread rods are an excellent choice for hanging and fastening Aickinstrut Channel. Aickinstrut all-thread rods are available in five sizes:  $\frac{3}{8}$ ",  $\frac{1}{2}$ ",  $\frac{5}{8}$ ",  $\frac{3}{4}$ ", and 1". All Aickinstrut all-thread rods are manufactured from pultruded vinyl ester resin and are gray in color. The standard rod lengths are four and eight feet.

**FOUR FOOT LENGTHS**

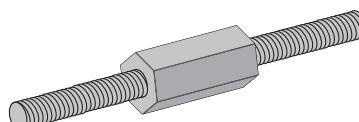

Part Number	Size (in.)
200-3827	3/8 - 16 x 48
20V-2100	1/2 - 13 x 48
200-3829	5/8 - 11 x 48
200-3830	3/4 - 10 x 48
200-3831	1-8 x 48

**EIGHT FOOT LENGTHS**

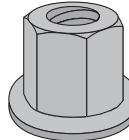

Part Number	Size (in.)
200-3827-96	3/8 - 16 x 96
200-3828-96	1/2 - 13 x 96
200-3829-96	5/8 - 11 x 96
200-3830-96	3/4 - 10 x 96
200-3831-96	1-8 x 96

**AICKINSTRUT® ROD COUPLERS**

Rod couplers are an excellent means for extending Aickinstrut FRP all-thread rods beyond their standard lengths. All Aickinstrut rod couplers are manufactured from glass-reinforced polyurethane and are colored gray.

Hex flange nuts are manufactured from glass-reinforced polyurethane resin and are available in four sizes.

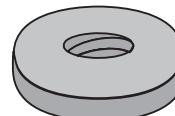

Part Number	Size (in.)	Thread Shear (lbs)*	Torque
375PU-FN-000	3/8 - 16	500	10 in/lbs.
500PU-FN-000	1/2 - 13	1200	3 ft/lbs.
625PU-FN-000	5/8 - 11	2200	8 ft/lbs.
750PU-FN-000	3/4 - 10	2900	12 ft.lbs.

\* Thread shear values shown represent a 3:1 safety factor.

**ALL-THREAD WASHERS**

COPE-GLAS All-Thread Washers are flat fiberglass washers for use with FRP all-thread rods. All-thread rod washers are  $\frac{1}{4}$ " thick with a  $\frac{1}{e}$ " diameter and are available in polyester or vinyl ester resin. To order vinyl ester, add the suffix "V" to the part number.

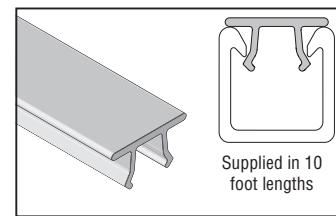

Part Number	All-Thread Rod Size (in.)
WR375	3/8
WR500	1/2
WR625	5/8
WR750	3/4

\* Add "-SL" to the part number for slotted strut.

**CHANNEL CAPPING STRIP**

Channel capping strip is made from PVC and is provided in 10 foot lengths. Part Number 20E-5000

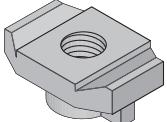

\* Thread shear values shown represent a 3:1 safety factor.

# COPE-GLAS™ CABLE TRAY SYSTEM

## AICKINSTRUT® SUPPORT SYSTEMS

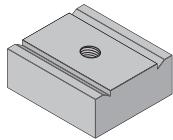

### AICKINSTRUT® CHANNEL NUTS

Aickinstrut Channel Nuts can be used to attach pipe straps, channel fittings or COPEGLAS holdown clamps to Aickinstrut Channel. The standard duty channel nuts are designed for applications where high thread shear values are not required. The heavy duty channel nuts are designed for applications that require high thread shear and torque values.

**STANDARD DUTY**

Part Number	Size (in.)	Thread Shear (lbs.)*	Torque (ft./lbs)
375PU-CN	5/16- 16	460	2
500PLJ-CN	1/2	460	3

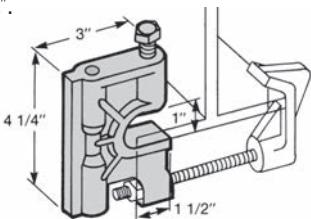

**HEAVY DUTY**

Part Number	Size (in.)	Thread Shear (lbs.)*	Torque (ft./lbs)
375PU-CNJHD	5/8- 16	1400	8
500PU-CNHD	1/2-13	1400	8

\*Thread shear values shown a 3:1 safety represent factor.

### HANGER ROD BEAM CLAMPS

COPE-GLAS Hanger Rod Beam Clamps are molded from glass-reinforced polyurethane and are available in three sizes: 5/8", 1/2" and 5/8".

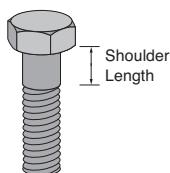

Part Number	Size (in.)	Thread Shear (lbs.)*	Torque (ft./lbs)
RGBC-1	5/8	500	10
RGBC-2	1/2	500	10
RGBC-3	5/8	500	10

\*Thread shear values shown represent a 3:1 safety factor.

### FIBERFAST BOLTS

Fiberfast bolts are available in three diameters (5/16", 3/8" & 1/2") and are injection molded from glass-reinforced polyurethane resin.

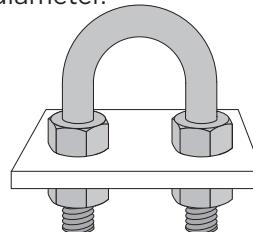

Part Number	Size (in.)	Thread Shear (lbs.)*	Shank Shear (lbs.)	Torque (ft./lbs)
300PU-100	5/16 X 1	225	450	3
300PU-125	5/16 X 1 1/4	225	450	3
300PU-150	5/16 X 1 1/2	225	450	3
375PU-125	3/8 X 1 1/4	250	470	3
375PU-150	3/8 X 1 1/2	250	470	3
375PU-200	3/8 X 2	250	470	3
375PU-250	3/8 X 2 1/2	250	470	3
375PU-300	3/8 X 3	250	470	3
500PU-125	1/2 X 1 1/4	450	870	8
500PU-200	1/2 X 2	450	870	8
500PU-250	1/2 X 2 1/2	450	870	8
500PU-300	1/2 X 3	450	870	8

\*Thread shear and shank shear values shown represent a 3:1 safety factor.

### NON-METALLIC U-BOLTS

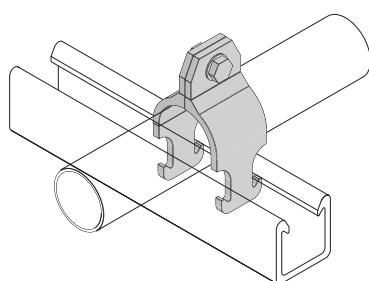

Non-metallic U-Bolts are injection molded from glass-reinforced polyurethane and are available in sizes from 1/2" - 4" diameter.

Part Number	Size (in.)	Load (lbs.)*	Torque (ft./lbs)
UB-050	1/2	135	40
UB-075	3/4	135	40
UB-100	1	135	40
UB-125	1 1/4	135	40
UB-150	1 1/2	135	40
UB-200	2	135	80
UB-250	2 1/2	135	80
UB-300	3	135	80
UB-350	3 1/2	153	80
UB-400	4	135	80

\*Torque and load values shown represent a 3:1 safety factor.

### K. RIGID PIPE CLAMPS

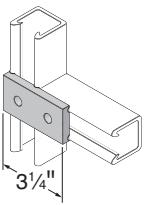

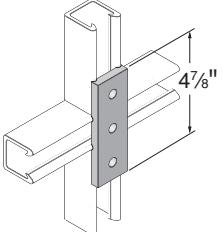

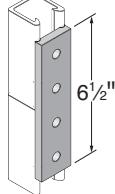

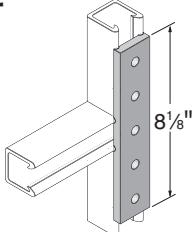

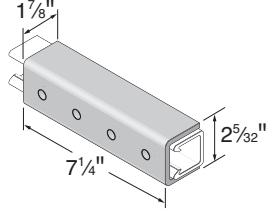

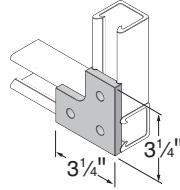

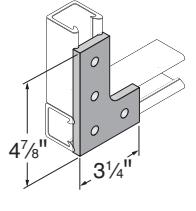

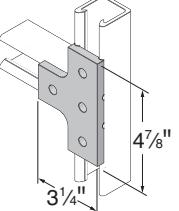

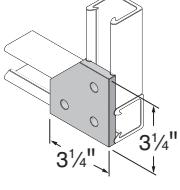

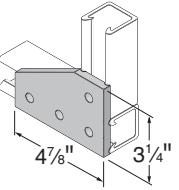

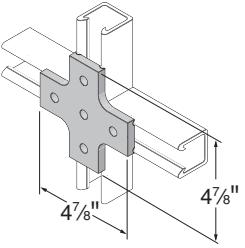

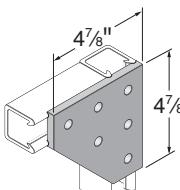

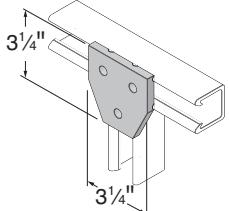

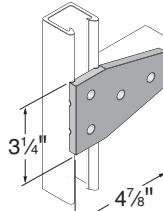

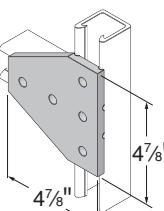

Aickinstrut Rigid Pipe Clamps resemble the more traditional style of pipe clamps. These clamps are made from glass reinforced polyurethane and are sized based on the pipe inside diameter or nominal size.

Part Number	Nominal Size (in.)	PVC Sch. 80 and Rigid	Design Load (lbs.)*		FRP Bolt Size (in.)	Torque
			Type 1	Type 2		
PCR-050	1/2	.840	180	25	1/4x1	5in/lbs
PCR-075	3/4	1.050	180	25	1/4x1	5in/lbs
PCR-100	1	1.315	180	25	1/4x1	5in/lbs
PCR-125	1 1/4	1.660	180	25	1/4x1	5in/lbs
PCR-150	1 1/2	1.900	180	25	1/4x1	5in/lbs
PCR-200	2	2.375	180	25	1/4x1	5in/lbs
PCR-300	3	3.500	220	50	5/8 x 1 1/4	3 ft/lbs
PCR-400	4	4.500	250	100	5/8 x 1 1/4	3 ft/lbs
PCR-600	6	6.625	250	100	3 1/8 x 1 1/4	3 ft/lbs

\*Design loads shown represent a safety factor 3:1

**FIBERGLASS CHANNEL**

Fiberglass channel is designed to carry light wiring or tubing loads where a transition from cable tray to individual control points are required. All straight sections are offered in solid or punched construction and are supplied in ten and twenty foot lengths. COPE-GLAS Channel is available in polyester or vinyl ester resin. Contact factory for vinyl ester channel pricing. Channel fittings are supplied completely assembled from the factory. Special channel fittings that are not standard catalog items are available upon request. Channel splice plates and fasteners are separate order items.

**SOLID AND PUNCHED STRAIGHT CHANNEL (10FT. & 20FT. LENGTH)**

<b>Solid</b>	<b>Punched</b>	<b>Width</b>	<b>"A"</b>	<b>"B"</b>
CH2-(L)	-Not Avail-	2" (51mm)	1 13/16" (31mm)	1/8" (3mm)
CH3-(L)	CH3-(L)P	3" (76mm)	7/8" (22mm)	1/4" (6mm)
CH4-(L)	CH4-(L)P	4" (102 mm)	1 3/8" (35mm)	3/16" (5mm)
CH6-(L)	CH6-(L)P	6" (152mm)	1 5/8" (41mm)	1/4" (6mm)
CH8-(L)	CH8-(L)P	8" (203mm)	2 3/16" (56mm)	1/4" (6mm)

Punched channel consists of two rows of 12" diameter holes on 12" centers.

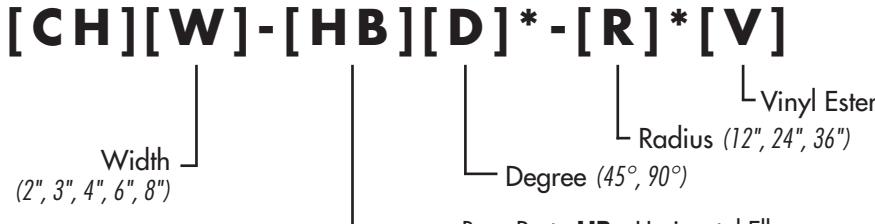

**CHANNEL FITTINGS [CH]**

Solid and punched Channel Fittings are available for all channel widths except 2" (2" punched channel fittings are not available). All fittings are preassembled and do not include splice plates and hardware. Contact factory for dimensional information on 45° Channel Fitting bends.

Unless specified otherwise, smooth radius channel fittings will be supplied wherever possible for all 4" (102mm) and 6" (152mm) widths.

**Ordering Information**

To create a part number, first insert the fitting type from key shown below. Then substitute the appropriate number for "W", the desired radius for "R" and the degree of bend for "D". Add a "P" suffix to the "W" designation to specify punched channel fittings. Channel Fittings are available in polyester or vinyl ester resin. Polyester is standard, to specify vinyl ester resin, add the suffix "V" to the part number.

**Ordering Information:**

**Example:** CH4-HB90-24  
4" Wide Channel, 90° Horizontal Elbow, 24" Radius

Base Part: **HB** - Horizontal Elbow  
**VI** - Inside Vertical Elbow  
**VO** - Outside Vertical Elbow  
**HT** - Horizontal Tee  
**X** - Horizontal Cross

\* Radius and degree designations do not apply to tees and crosses.

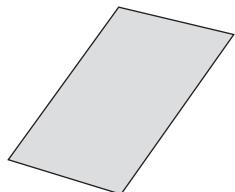

Note: Connector plates and hardware are not included and must be ordered separately.

# COPE-GLAS™ CABLE TRAY SYSTEM

## FIBERGLASS CHANNEL

### COVERS [C]

Covers are used where cable protection is necessary or desired. Covers are available in polyester or vinyl ester resin and are offered in ten foot lengths. To specify vinyl ester resin, add the suffix "V" to the part number.

#### Cover Ordering Information:

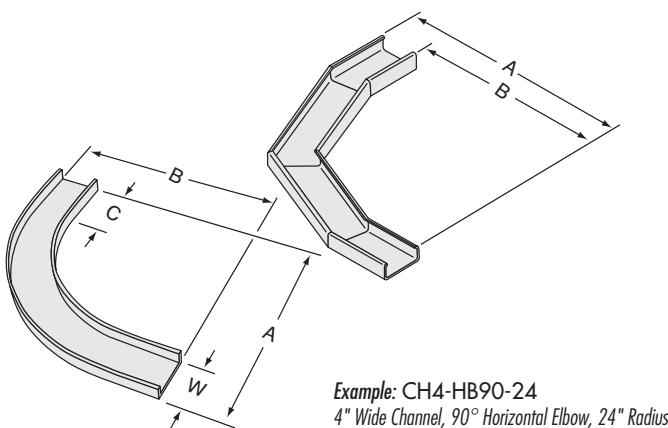

[**C**][**W**]-[**HB**][**D**]\*-[**R**]\*[**V**]  
Width (2", 3", 4", 6", 8")      Suffix

8"	CH8-SPV90	CH8-SPV45	CH8-SPV22

### CHANNEL SPLICE PLATE HARDWARE

Assembly hardware sets include:

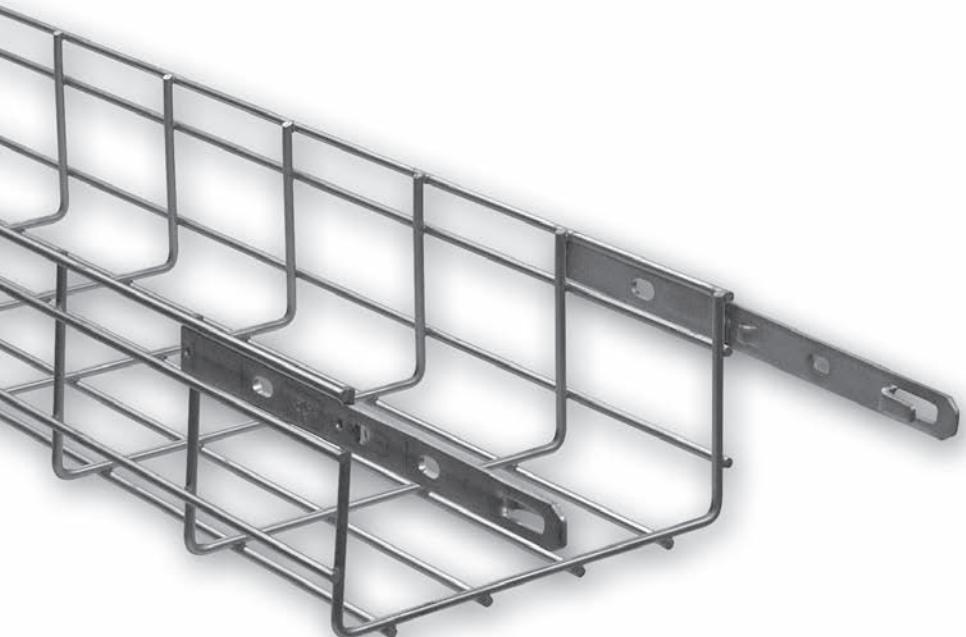

- (1) 316 stainless steel 1/4-20 x 3/4" bolt,
- (1) 316 stainless steel 1/4-20 nut and
- (2) 316 stainless steel flat washers.

Assembly hardware is sold individually and not provided with channel straight sections or fittings. Four sets are required for each splice plate.

# WIRE BASKET SYSTEM

## OVERVIEW

### PRODUCT DESCRIPTION

Wire basket tray is a welded wire mesh cable management system produced from high strength steel wires. Wire basket tray is produced by first welding a net, forming the channel, and then finishing after fabrication. The 2" x 4" mesh permits continuous airflow to help prevent heat buildup. In addition, this unique open design prevents the buildup of dust, contaminants and bacterial proliferation.

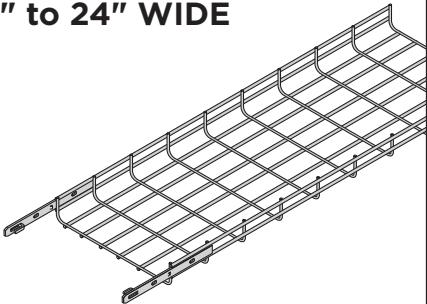

Wire basket tray is produced in standard 10' lengths and is supplied in three channel depths: 2", 4", and 6".

Wire basket tray is offered in nine different widths:

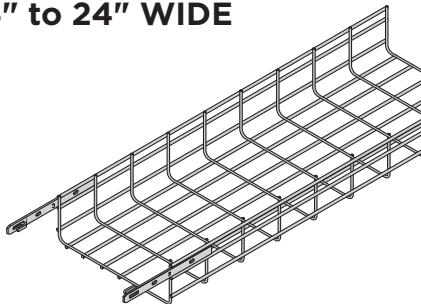

2" (50 mm),	4" (100mm),
6" (150mm),	8" (200mm),
12" (300mm),	16" (400mm),
18" (450mm),	20" (500mm), and
24" (550mm).	

Special sizes are available to meet your unique requirements.

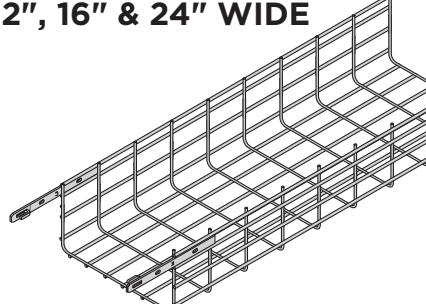

**CAT2 Series - 2" HIGH,  
2" to 24" WIDE**

**CAT4 Series - 4" HIGH,  
4" to 24" WIDE**

**CAT4 Series - 6" HIGH,  
12", 16" & 24" WIDE**

### STANDARD FINISH

**EG — ELECTRO-PLATED ZINC GALVANIZED** — (ASTM B633 TYPE III, SC3 • Thickness: .000472" (12µm))

Electrodeposited zinc coating is suitable for most indoor applications and may be used outdoors in mild environmental conditions.

### SPECIAL ORDER FINISHES

**HG — HOT DIP GALVANIZED** — (ASTM A123 GRD.55 • Thickness: .0002165" (55µm))

Provided by immersing the product in a molten zinc bath. This treatment is most suitable for outdoor applications or situations where increased corrosion resistance is desired.

**SS — 304 TYPE STAINLESS STEEL or  
S1 — 316 TYPE STAINLESS STEEL**

Corrosive resistant stainless steel with no additional surface treatment. This material option provides the best corrosion resistance available. Stainless steel is used primarily in marine environments or food processing facilities.

**ZD — DICHROMATE** — (ASTM B633 Type II, SC3 • Thickness: .000472" (12µm))

An electro-galvanized zinc plate is applied to the steel base metal. Yellow dichromate is applied over the zinc and results in a gold appearance which acts as a nonporous barrier sealant.

**OTHER** — Powder coating available.

### HOW TO ORDER

Part numbers shown in the catalog are for the standard electro-galvanized finish.

For special order finishes, add the finish code as a suffix.

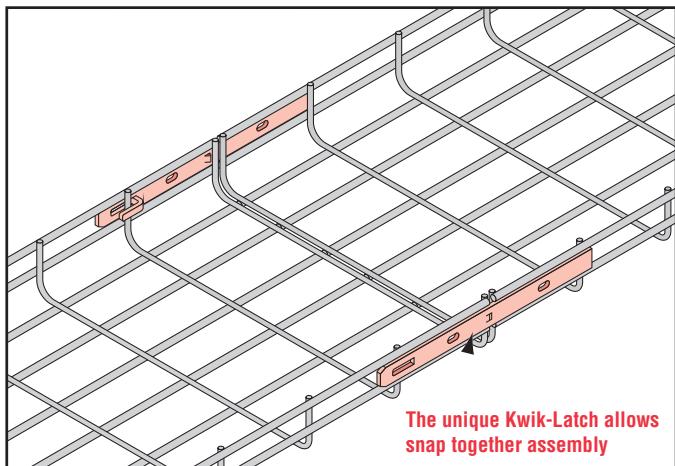

### EXAMPLE —

CAT2-12SL-120 is electro-galvanized

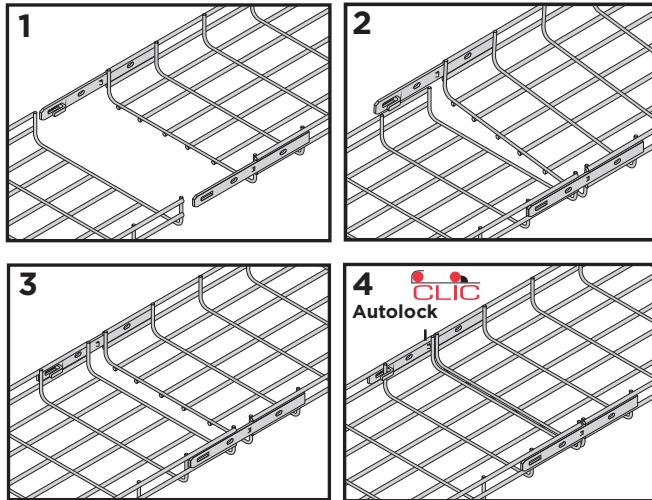

CAT2-12SL-120-SS is stainless steel

## SELF-SPlicing STRAIGHT LENGTHS

The Kwik-Latch splicing system makes connecting wire basket tray fast and simple. The Kwik-Latch, or self splicing bars which come pre-installed on wire basket tray systems, eliminates the need for a typical nut and bolt type connection. For proper grounding of wire basket tray please refer to page 234.

## WIRE BASKET ASSEMBLY - CAT2, CAT4, CAT6

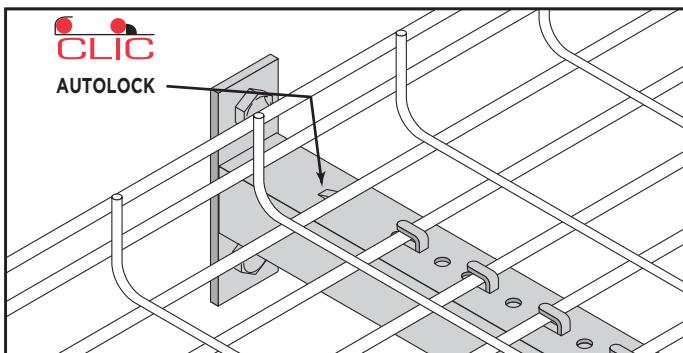

**Step 1** Align the trays as shown.

**Step 2** While raising the rear edge of the male connection, slide the tray forward, but do not engage the locking clip.

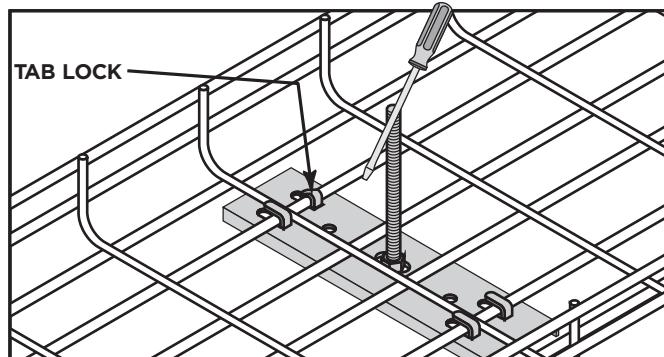

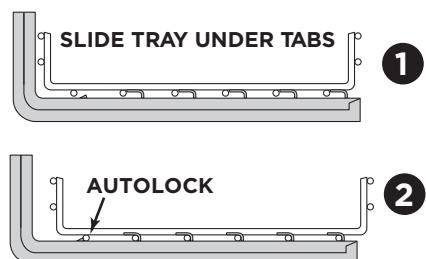

**Step 3** Push the rear locking clip over the back edge of the tray.

**Step 4** Slide the tray forward to engage both front and rear locking clips

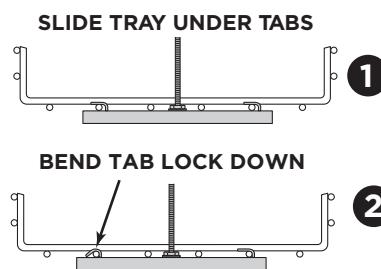

## ACCESSORY ASSEMBLY

Many of the wire basket accessories feature the unique Autolock. Just slide the tray under the tabs and then push down to engage the Autolock. No tools, bending, or attachments are required for a secure connection.

For accessories which use the tab lock, the tray is secured by using a screw driver to gently bend one of the tabs down over the tray.

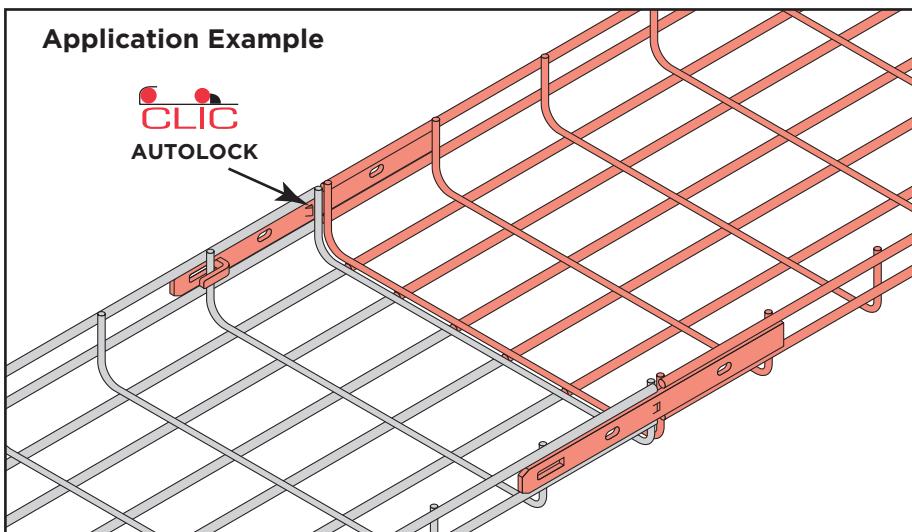

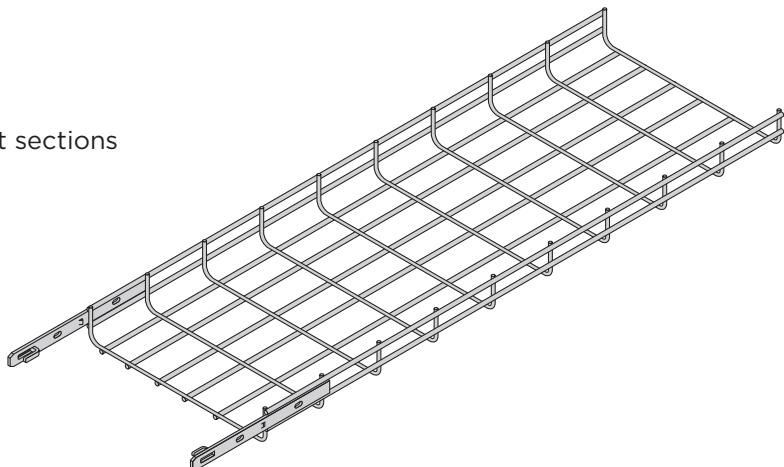

# WIRE BASKET SYSTEM

## DOUBLE ROD REINFORCED TRAY (2" DEPTH)

### DOUBLE ROD REINFORCED TRAY (2" DEPTH) [CAT2-(W)SL-120]

- Double rod reinforced tray is 2" high
- Standard length of tray is 10'
- Standard finish is electro-galvanized (EG)
- No hardware is necessary to connect straight sections
- For continuous grounding use CAT-GC  
(See page 234)

## TRIPLE ROD REINFORCED TRAY (4" DEPTH)

## TRIPLE ROD REINFORCED TRAY (4" DEPTH) [CAT4-(W)SL-120]

- Triple rod reinforced tray is 4" high
- Standard length of tray is 10'
- Standard finish is electro-galvanized (EG)
- No hardware is necessary to connect straight sections
- For continuous grounding use CAT-GC (See page 234)

Safety Factor 1.5

## STANDARD BAR CONNECTOR

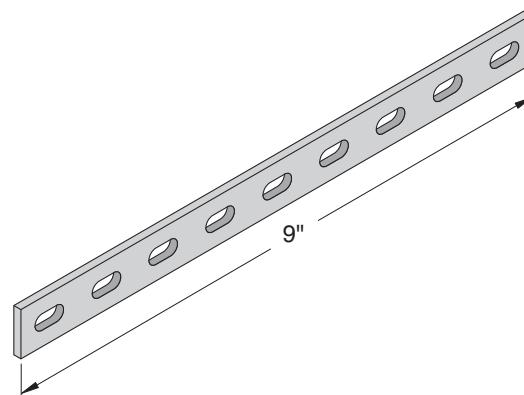

## SPLICE

Weight: .29/each

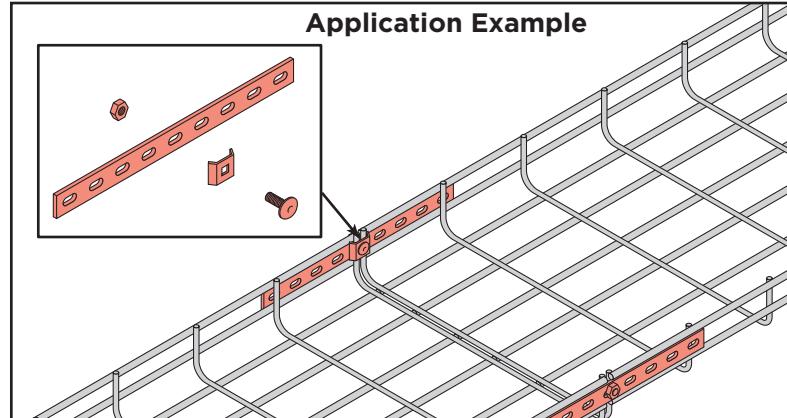

- Splice bar connector is  $\frac{3}{4}$  x 9" long
- Standard finish is electro-galvanized (EG)
- Connect using CH3 (sold separately)
- Bend 90° for use as an angle connector

## NOTES:

1. Always place nut on outside of tray
2. For use with CAT2, CAT4, & CAT6 tray
3. The splice connector is used to connect remnant sections of tray cut from standard lengths and to field fabricate fittings.

## Application Example

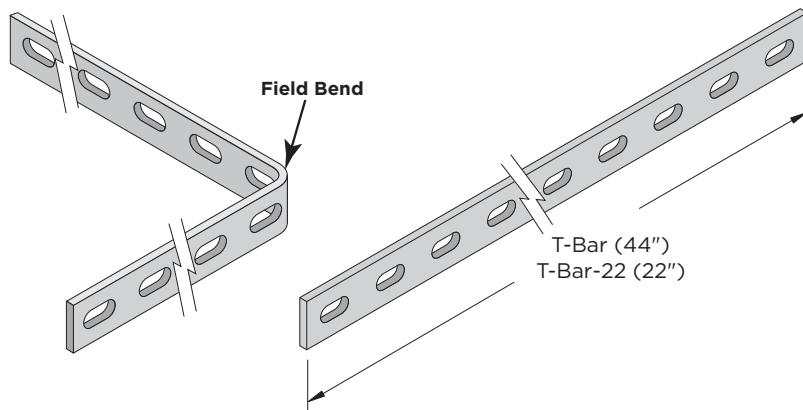

## BEND &amp; INTERSECTION BARS

## T-BAR

Weight: 1.43/each

- T-Bar connector is  $\frac{3}{4}$  x 44" long
- Connect using CH3 (sold separately)
- Bend 90° for use as an angle connector

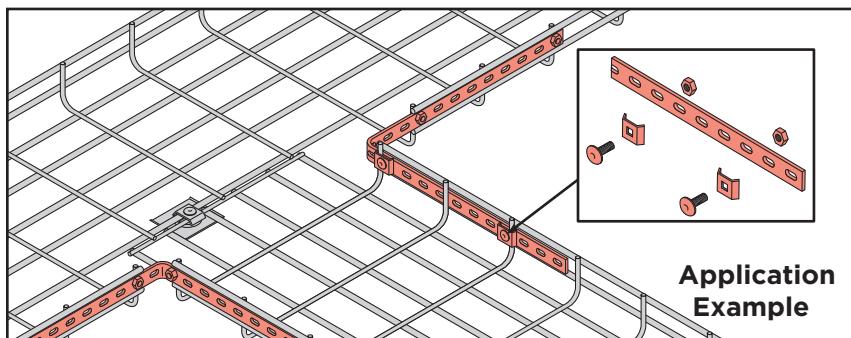

## T-BAR-22

Weight: .715/each

- T-Bar connector is  $\frac{3}{4}$  x 22" long
- Connect using CH3 (sold separately)

## NOTES:

1. Always place nut on outside of tray
2. For use with CAT2, CAT4, & CAT6 tray
3. Used for tees which require a heavier support
4. These bars are normally cut to appropriate length

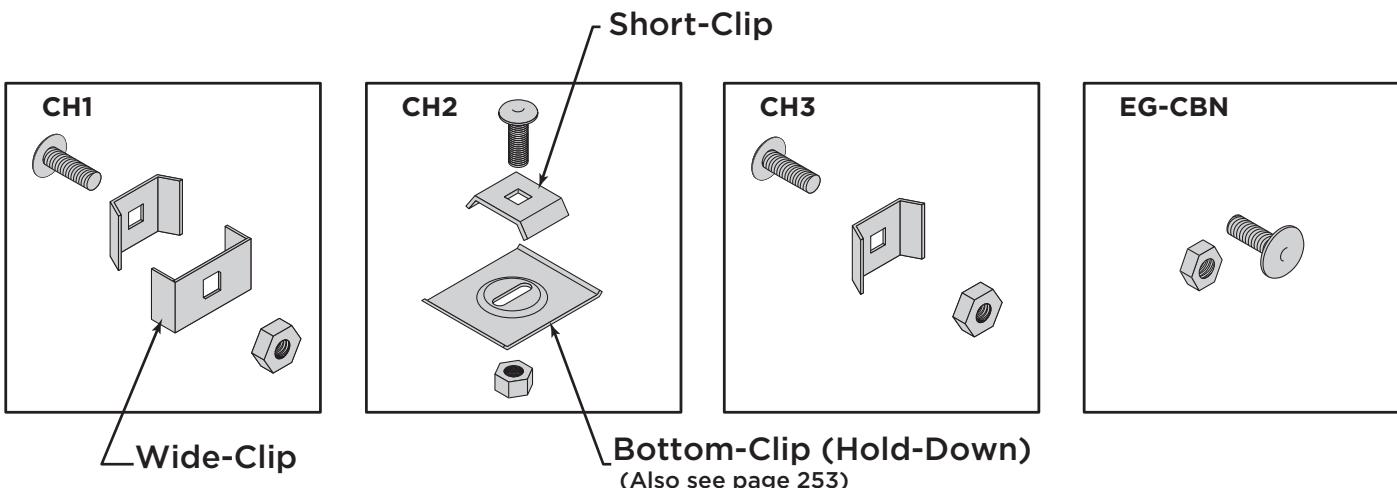

## Application Example

# WIRE BASKET SYSTEM

## CONNECTOR HARDWARE

### CONNECTOR HARDWARE OVERVIEW

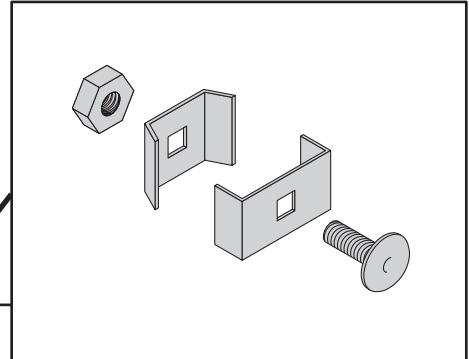

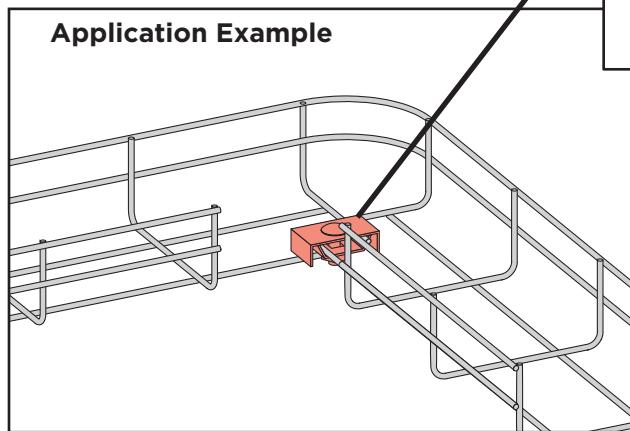

Part Kit	Weight	No./ Pkg
CH1	0.70	10
CH2	1.16	10
CH3	0.44	10
EG-CBN	0.20	10

Single Part	WEIGHT	NO./ PKG
Short-Clip	0.20	10
Wide-Clip	0.31	10
Bottom-Clip	0.92	10

### CONNECTOR KIT [CH1]

- Standard bar connector is  $1\frac{3}{16} \times 1\frac{1}{16}$ "
- Standard finish is electro-galvanized (EG)
- Sold in packs of 10  
(EG-CBN connector hardware included)

NOTE: Always place nut on outside of tray

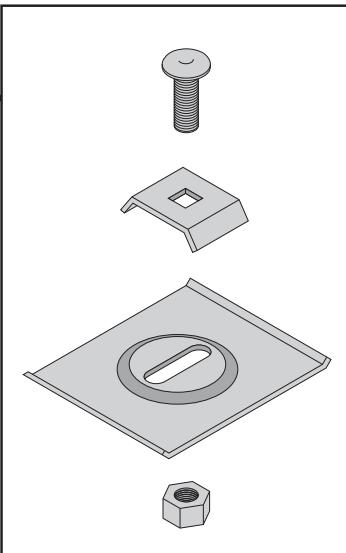

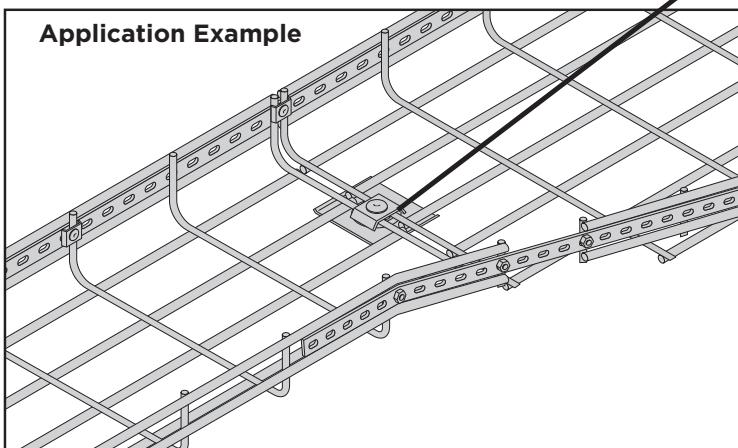

## CONNECTOR HARDWARE KITS

## CONNECTOR KIT [CH2]

- Bottom connector is  $2 \times 2\frac{3}{8}$ "
- Standard finish is electro-galvanized (EG)
- Sold in packs of 10  
(EG-CBN connector hardware included)

NOTE: Always place nut on outside of tray

**Application Example**

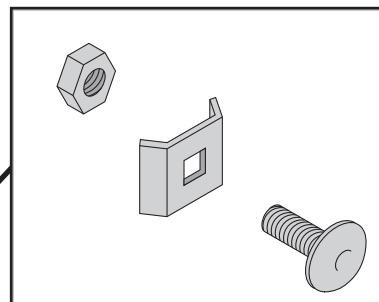

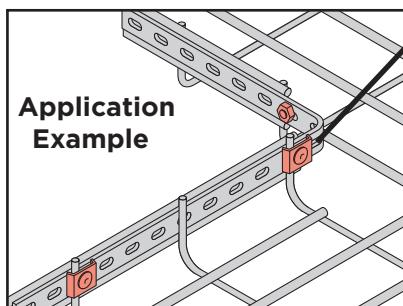

## CONNECTOR KIT [CH3]

- Universal connector is  $1\frac{1}{16} \times 1\frac{5}{16}$ "
- Standard finish is electro-galvanized (EG)
- Sold in packs of 10  
(EG-CBN connector hardware included)

NOTE: Always place nut on outside of tray

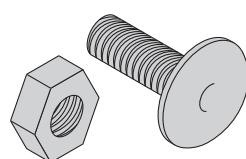

**Application Example**

## CONNECTOR HARDWARE [EG-CBN]

- $\frac{1}{4}-20 \times \frac{3}{4}$ " Carriage bolt
- $\frac{1}{4}-20$  Hex head nut
- Standard finish is electro-galvanized (EG)
- Sold in packs of 10 each

NOTE: Always place nut on outside of tray

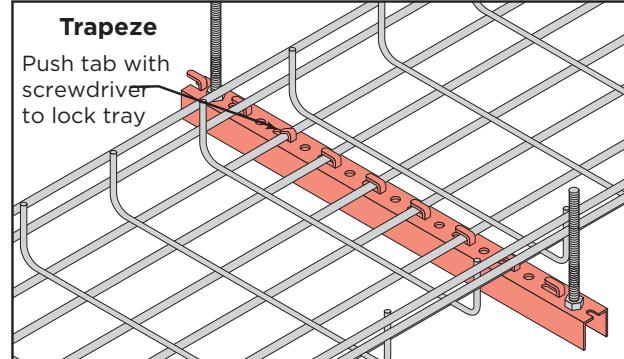

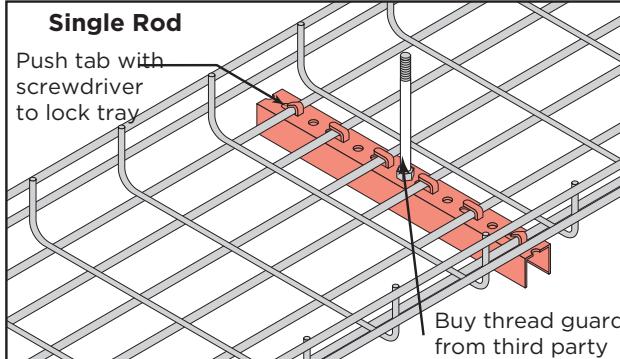

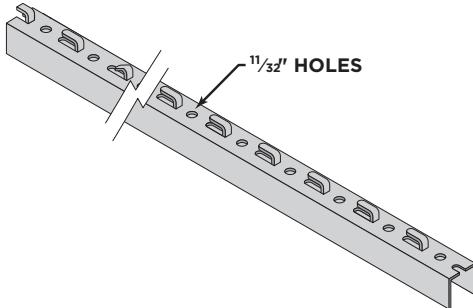

# WIRE BASKET SYSTEM

## U SUPPORT BRACKET [CAT-USB-120]

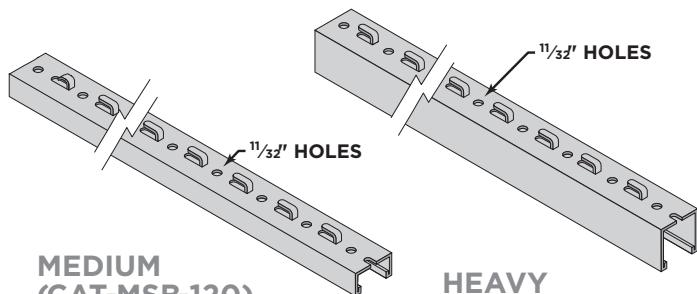

Weight: 6.83 lb/each

- U support bracket  $1\frac{5}{16} \times 1\frac{5}{16}$ " channel
- Standard finish is pregalvanized (PG)
- Support is 10' long, customer cuts to size as needed
- Cut lengths 6" wider than tray width for trapeze  
Cut lengths 1" shorter than tray width for single rod support
- Unique grip system requires only a push of a screwdriver to fasten the tray to the supports

## SUPPORT BRACKET MEDIUM [CAT-MSB-120] & HEAVY [CAT-HSB-120]

- Heavy support bracket is  $1\frac{5}{8} \times 1\frac{5}{8}$ " strut,  
Medium support bracket is  $1\frac{5}{8} \times 1\frac{3}{16}$ " strut
- Standard finish is pregalvanized (PG)
- Support is 10' long, customer cuts to size as needed
- Cut lengths 6" wider than tray width for trapeze  
Cut lengths 1" shorter than tray width for single rod support
- Unique grip system requires only a push of a screwdriver to fasten the tray to the supports

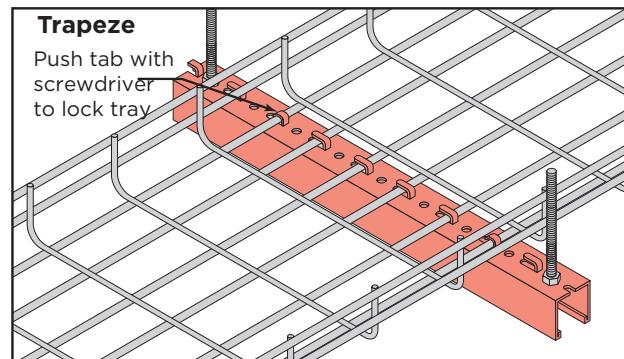

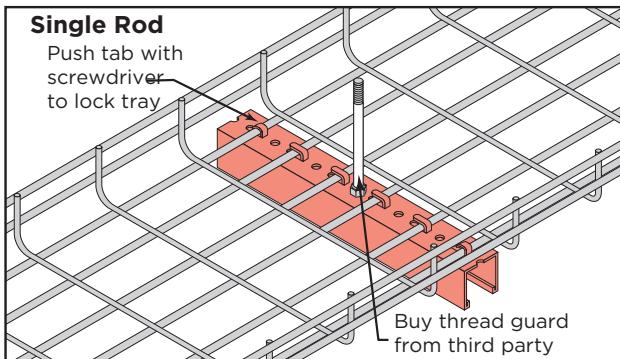

MEDIUM  
(CAT-MSB-120)

Weight 11.9 lb/each

HEAVY  
(CAT-HSB-120)

Weight: 16.53 lb/each

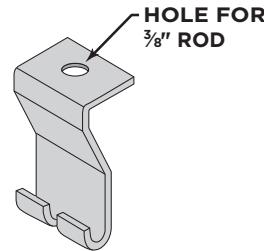

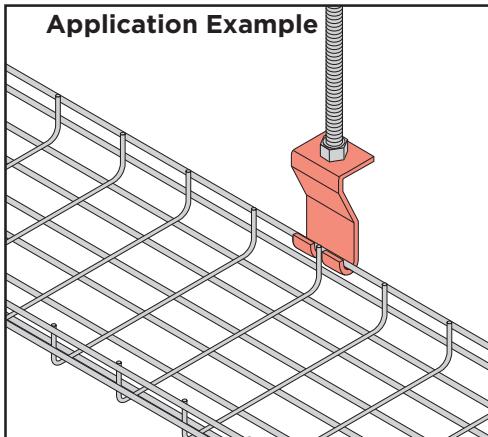

## DROP ROD CLIP

### DROP ROD CLIP [CAT-SIDE-HC]

Weight: .13 lb/each

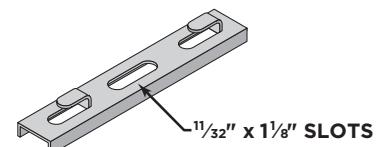

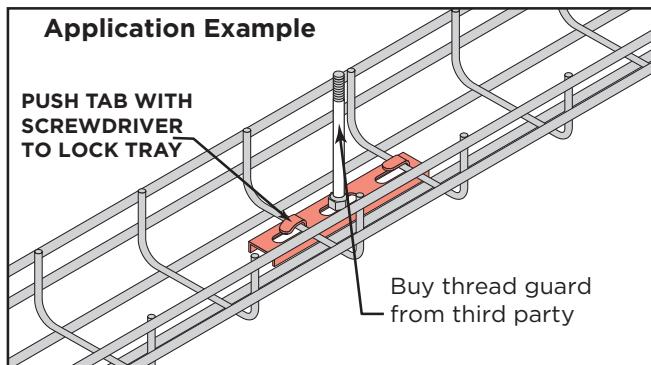

- Standard finish pregalvanized (PG)
- .08" Bracket thickness
- For all widths of tray

### DROP ROD CLIP [CAT-1X6-HC]

Weight: .12 lb/each

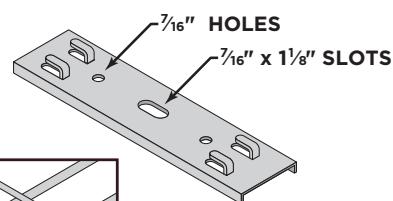

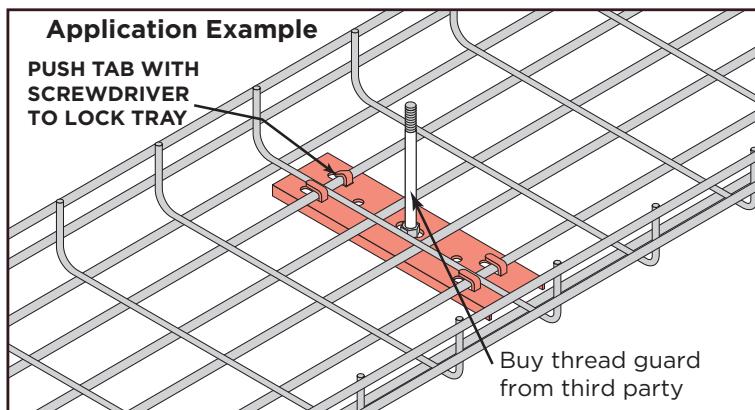

- Standard finish pregalvanized (PG)
- .08" Bracket thickness
- For all 4"w & 6"w tray

### DROP ROD CLIP [CAT-2X8-HC]

Weight: .40 lb/each

- Standard finish pregalvanized (PG)
- .08" Bracket thickness
- For all 8" w & 12" w tray

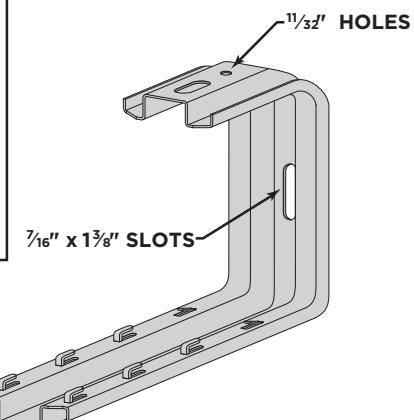

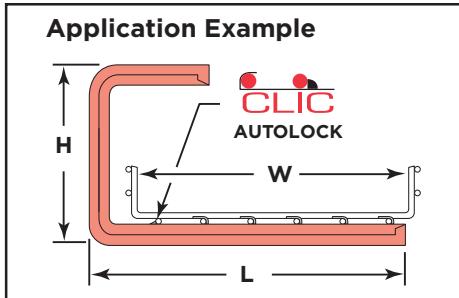

# WIRE BASKET SYSTEM

## WALL & CEILING MOUNTS

### CEILING CLIP [CAT-CCA-(W)]

- For attaching tray to ceiling
- Standard finish pregalvanized (PG)
- Easy mounting of the cable tray using grips and autolock

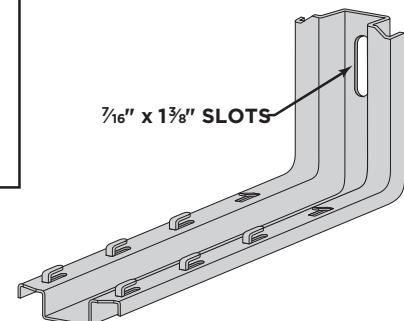

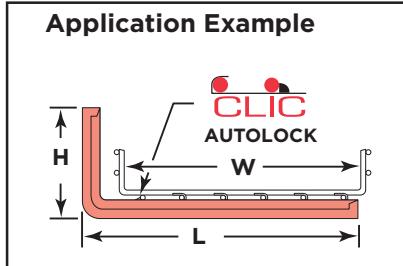

Ceiling Clip [CAT-CCA-(W)]

Part No.	Tray Size(W)	Height(H)	Length(L)	Wt(Lbs)	Load(Lbs)
CAT-CCA-04	4"	7"	6"	1.3	270
CAT-CCA-06	6"	7"	8"	1.5	225
CAT-CCA-08	8"	7"	10"	1.7	202
CAT-CCA-12	12"	7"	14"	2	180
CAT-CCA-16	16"	7"	18"	2.3	90

### WALL CLIP [CAT-CPA-(W)]

- For attaching tray to wall
- Standard finish pregalvanized (PG)
- Easy mounting of the cable tray using grips and autolock

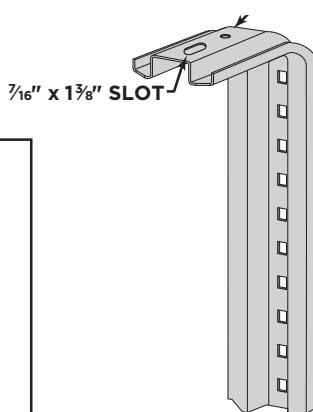

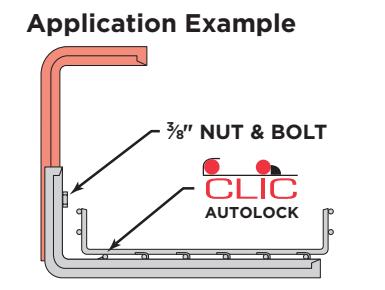

Wall Clip [CAT-CPA-(W)]

Part No.	Tray Size(W)	Height(H)	Length(L)	Wt(Lbs)	Load(Lbs)
CAT-CPA-06	6"	5"	8"	1	337
CAT-CPA-08	8"	5"	10"	1.1	225
CAT-CPA-12	12"	5"	14"	1.5	202
CAT-CPA-16	16"	5"	18"	1.8	90

### PENDANT [CAT-PPA-(H)]

- Standard finish is pregalvanized (PG)
- For attaching tray to ceiling.  
Used with wall clip CAT-CPA Series

Pendant [CAT-PPA-(H)]			
Part No.	Height(H)	Length(L)	Wt(Lbs)
CAT-PPA-06	6"	5"	0.7
CAT-PPA-10	10"	5"	1.1
CAT-PPA-14	14"	5"	1.3
CAT-PPA-18	18"	5"	1.7
CAT-PPA-22	22"	5"	2.0
CAT-PPA-26	26"	5"	2.3

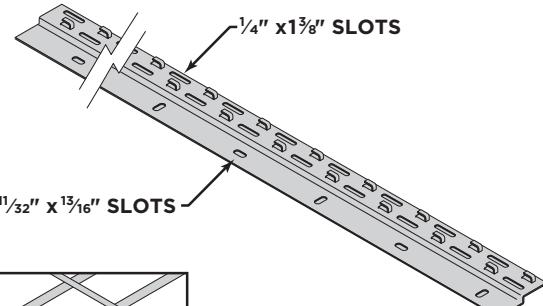

## CANTILEVER &amp; ZED BRACKETS

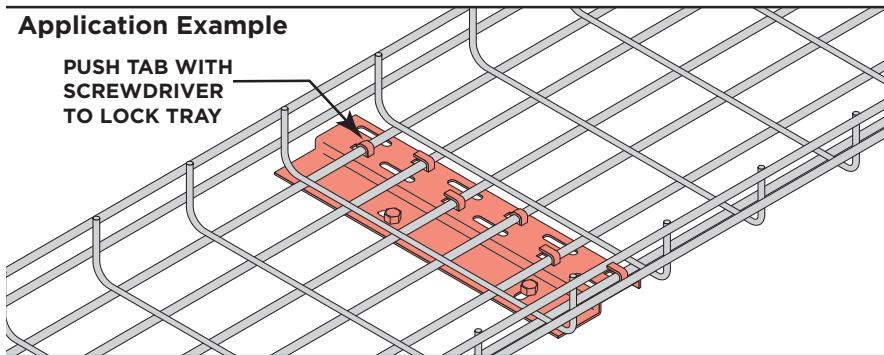

## ZED [CAT-ZBAR-120]

Weight: 11.24 lb/each  $\frac{1}{4}$ " x  $1\frac{3}{8}$ " SLOTS

- ZED floor or wall mounted support is  $\frac{1}{2}$  x  $3\frac{1}{2}$
- Standard finish pregalvanized (PG)
- Support is 10' long, customer cuts to size as needed
- Unique grip system requires only a push of a screwdriver to fasten the tray to the supports

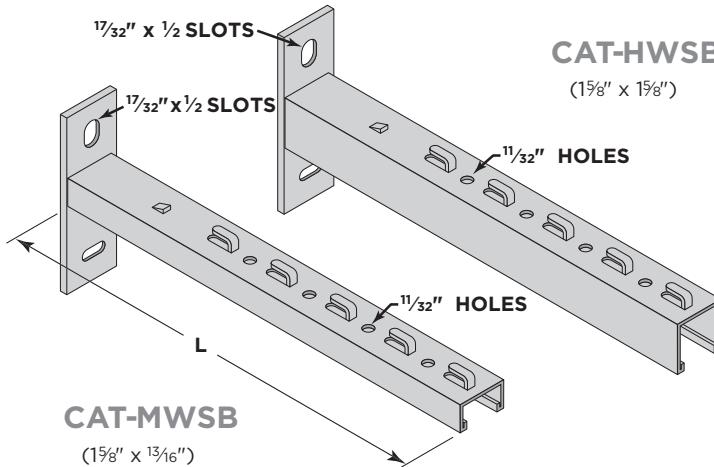

## Application Example

## CANTILEVER MEDIUM [CAT-MWSB-(W)] &amp; HEAVY [CAT-HWSB-(W)]

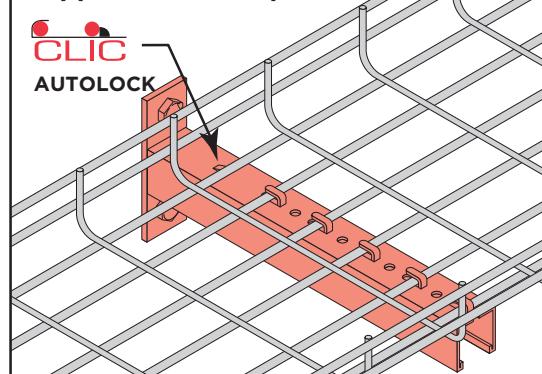

- Standard finish is hot-dipped galvanized (HG)
- Cantilever arm support  $1\frac{5}{8}$  x  $1\frac{5}{8}$ " or  $1\frac{5}{8}$  x  $1\frac{3}{16}$ " strut
- Unique Auto-Lock system requires no hardware to fasten the tray to the supports
- Use Strut Profile to support other items below the support bracket using strut hardware

## Cantilever Medium [CAT-MWSB-(W)] &amp; Heavy [CAT-HWSB-(W)]

Part No.	Channel Size	Tray Width (W)	Length (L)	Wt (Lbs)	Load (Lbs)
CAT-MWSB-06	$1\frac{5}{8}" x 1\frac{3}{16}"$	6"	8"	1.3	270
CAT-MWSB-08	$1\frac{5}{8}" x 1\frac{3}{16}"$	8"	10"	1.5	225
CAT-MWSB-12	$1\frac{5}{8}" x 1\frac{3}{16}"$	12"	14"	1.9	157
CAT-HWSB-08	$1\frac{5}{8}" x 1\frac{5}{8}"$	8"	10"	1.9	562
CAT-HWSB-12	$1\frac{5}{8}" x 1\frac{5}{8}"$	12"	14"	2.5	450
CAT-HWSB-18	$1\frac{5}{8}" x 1\frac{5}{8}"$	18"	18"	3	337
CAT-HWSB-20	$1\frac{5}{8}" x 1\frac{5}{8}"$	20"	22"	3.6	292
CAT-HWSB-24	$1\frac{5}{8}" x 1\frac{5}{8}"$	24"	26"	4.1	247

## HANGERS

### HANGER [CAT-HGR-2]

- Standard finish is pregalvanized (PG)
- Ceiling or center hung with threaded rod

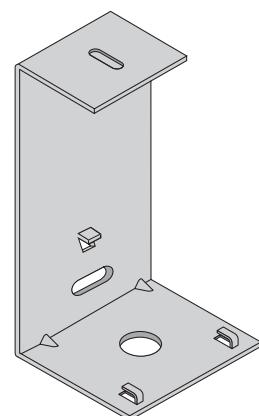

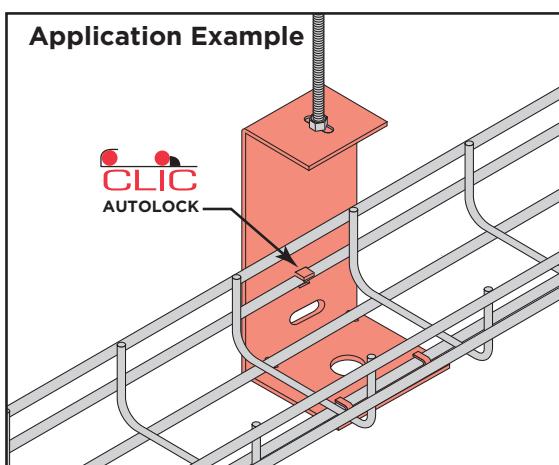

NOTE: For use with CAT2-02 only

### HANGER [CAT-HGR-4]

- Standard finish is pregalvanized (PG)
- Ceiling or center hung with threaded rod

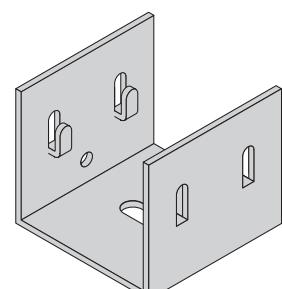

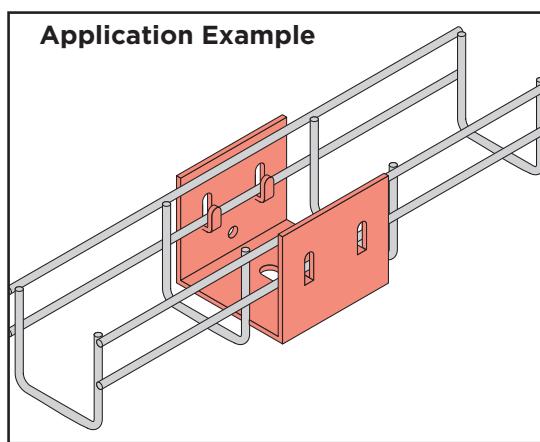

NOTE: For use with CAT2-02 only

### WALL BRACKET [CAT-WC-2]

- Standard finish is pregalvanized (PG)

NOTE: For use with CAT2-02 only

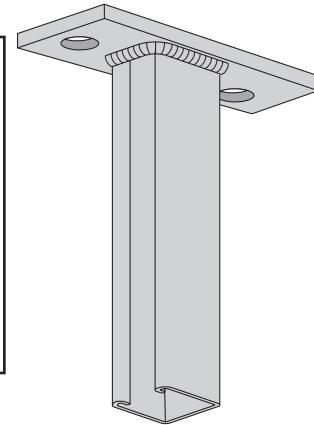

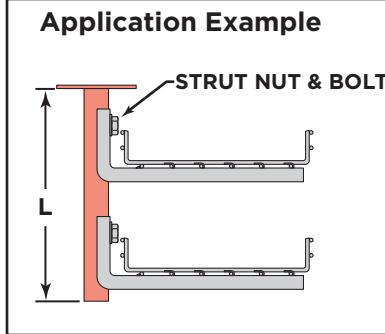

## HANGING BRACKET &amp; PENDENTS

## SINGLE CHANNEL PENDANT [PS 651-(L)]

- Standard finish is electro-galvanized (EG)

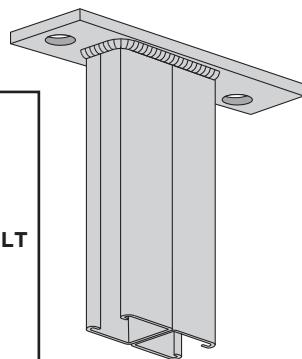

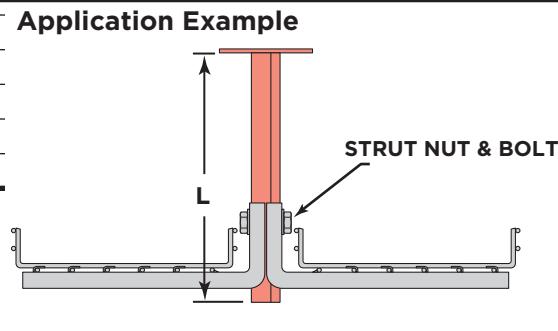

Single Channel Pendant [PS 651-(L)]			
Part No.	Length(L)	Uniform Load	Weight"
PS651-06	6"	1,200	1.85
PS651-12	12"	600	2.93
PS651-18	18"	400	4.01
PS651-24	24"	300	5.09

## BACK-TO-BACK CHANNEL PENDANT [PS 809-(L)]

- Standard finish is electro-galvanized (EG)

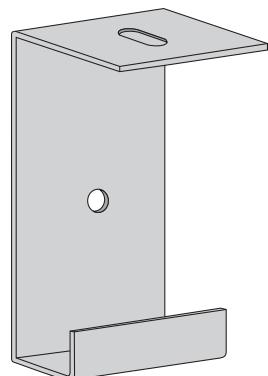

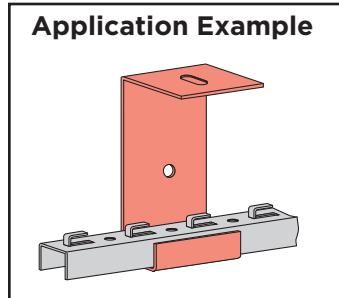

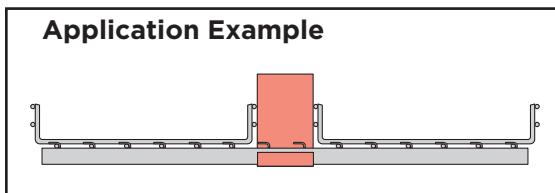

Back-to-Back Channel Pendant [PS 809-(L)]			
Part No.	Length(L)	Uniform Load	Weight
PS809-12	12"	2,000	5.02
PS809-18	18"	1,300	6.92
PS809-24	24"	1,000	8.82
PS809-30	30"	800	10.72
PS809-36	36"	650	12.62

## HANGING BRACKET [CAT-CB-USB]

Weight: .8 lb/each

- Standard finish is pregalvanized (PG)
- For Use with CAT-USB-120 Style Support Bracket Channel

# WIRE BASKET SYSTEM

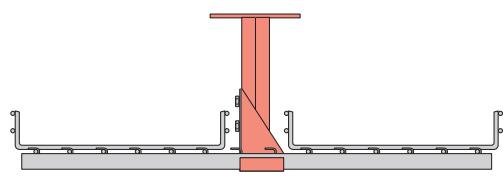

## HANGING BRACKETS

### HANGING BRACKET [CAT-AB-USB]

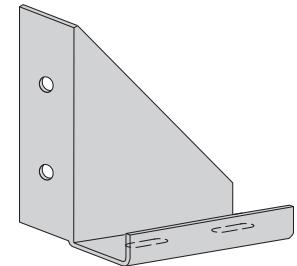

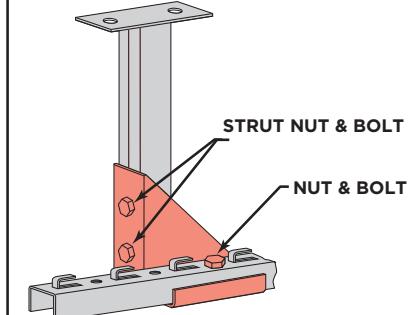

Weight: .53 lb/each

- Standard finish is pregalvanized (PG)
- For use with CAT-USB-120 Support Bracket Channel

#### Application Example

#### Application Example

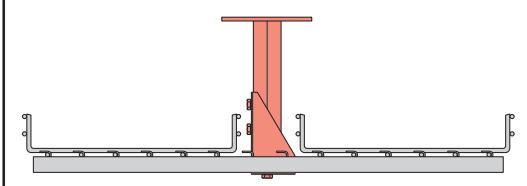

### HANGING BRACKET [CAT-AB-HSB]

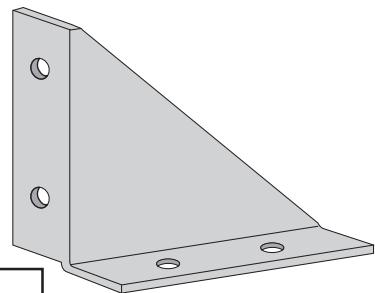

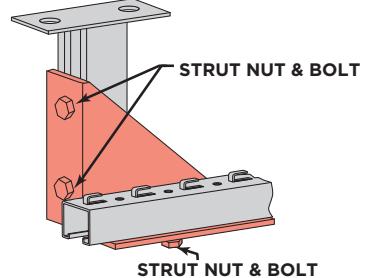

Weight: .62 lb/each

- Standard finish is hot-dipped galvanized (HG)
- For Use with:
  - CAT-MSB-10 Medium Support Bracket Strut
  - CAT-HSB-10 Heavy Support Bracket Strut

#### Application Example

#### Application Example

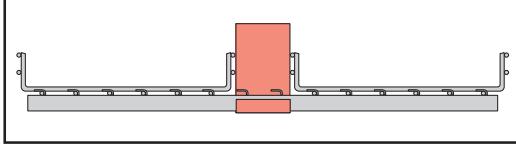

### HANGING BRACKET [CAT-CB-MSB]

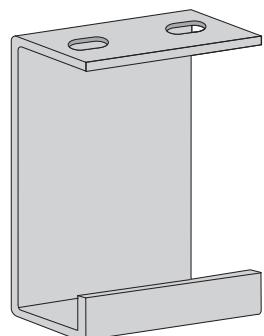

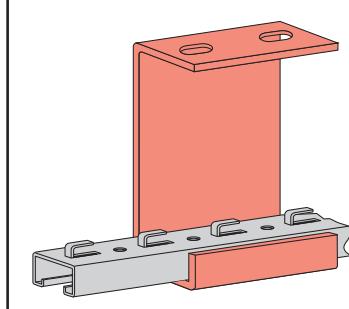

Weight: 1.46 lb/each

- Standard finish is pregalvanized (PG)
- For Use with:
  - CAT-MSB-10 Medium Support Bracket Strut

#### Application Example

#### Application Example

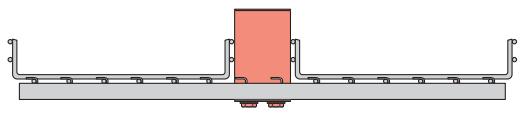

## HANGING BRACKETS

## HANGING BRACKET [CAT-CB-HSB]

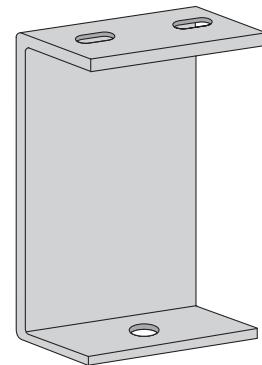

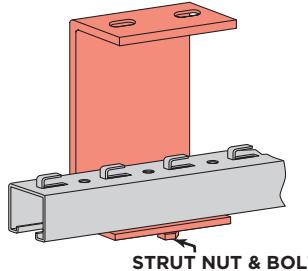

Weight: 2.98 lb/each

- Available in pregalvanized (PG) or hot-dipped galvanized (HG)
- For Use with:  
CAT-MSB-10 Medium Support Bracket Strut  
CAT-HSB-10 Heavy Support Bracket Strut

## Application Example

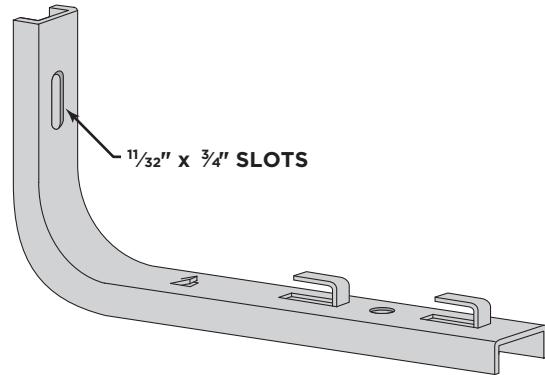

## Application Example

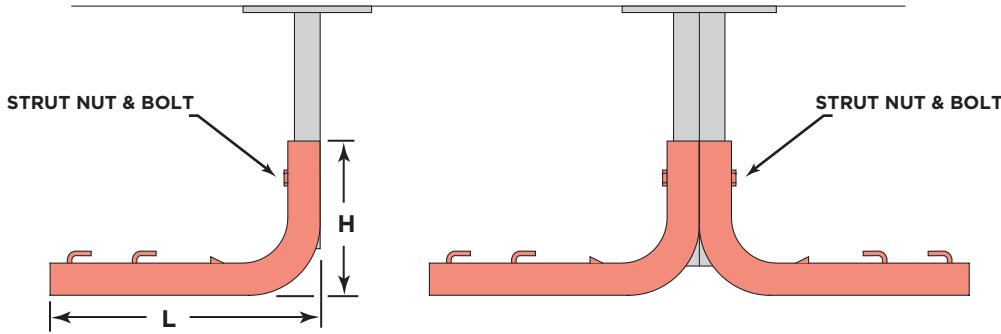

## BRACKET [CAT-CMA-(W)]

- Standard finish is pregalvanized (PG)
- Mounted on cantilever arms or channels
- Easy mounting of the bracket using grips and autolock
- Designed for use with new/existing 158" strut framing

## Application Example

## Bracket [CAT-CMA-(W)]

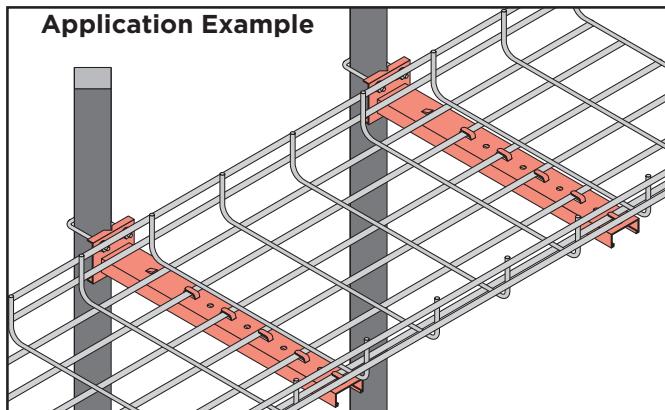

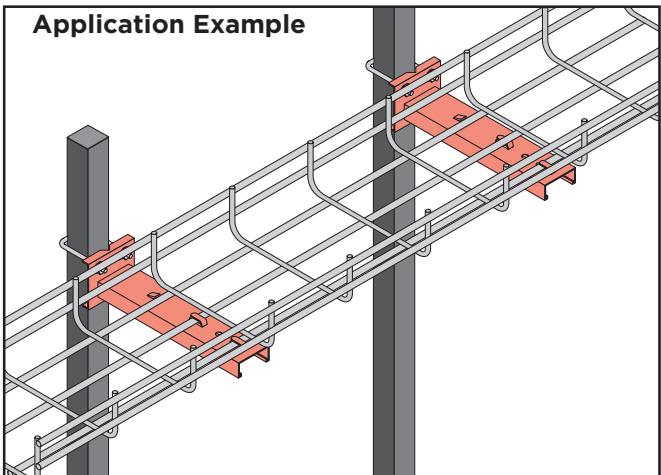

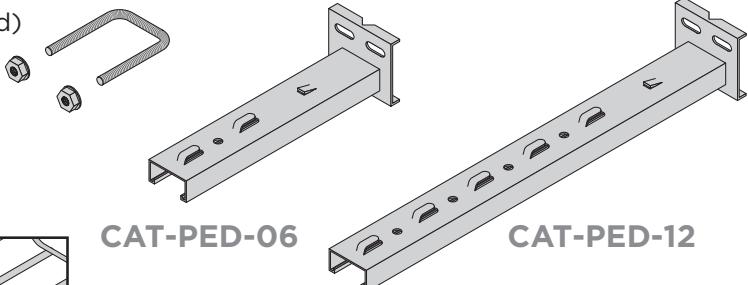

Part No.	Tray Width (W)	Height (H)	Length (L)	Wt (Lbs)	Load (Lbs)
CAT-CMA-04	4"	4.7"	5"	0.8	360

## PEDESTAL BRACKETS

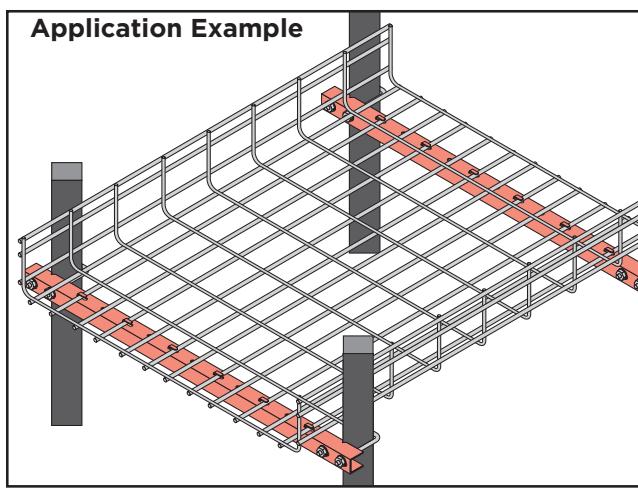

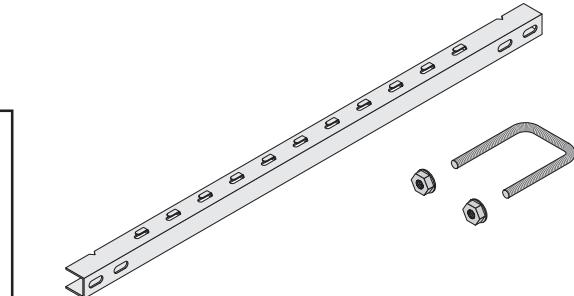

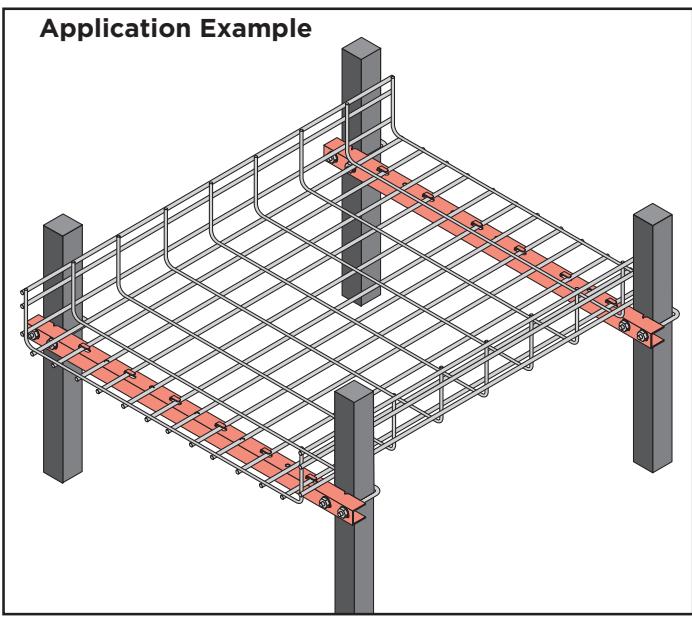

### PEDESTAL BRACKETS [CAT-PED-06] & [CAT-PED-12]

- Channel use on pedestal for raised floor
- Attach to pedestal using U-Bolt & nuts (included)

### PEDESTAL KIT [CAT-PED-KIT]

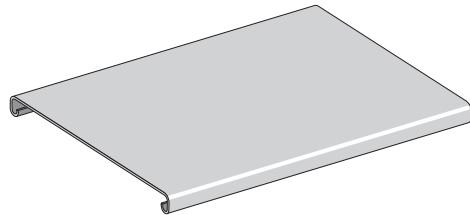

- Channel use on pedestal for raised floor
- Attach to pedestal using U-Bolt & nuts (included)

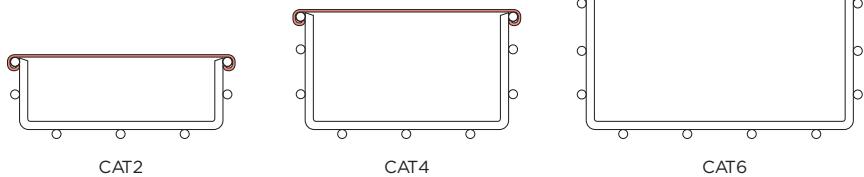

## COVER [CAT-CVR-(W)]

- Standard finish is pregalvanized (PG)
- Length is 10'

Part	WEIGHT (lb)
CAT-CVR-02	5.29
CAT-CVR-04	7.93
CAT-CVR-06	10.58
CAT-CVR-08	13.22
CAT-CVR-12	18.52
CAT-CVR-16	35.71"
CAT-CVR-18	39.68
CAT-CVR-20	43.65
CAT-CVR-24	51.53

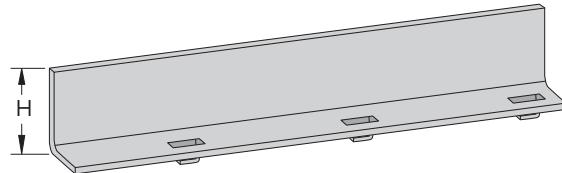

## Application Example

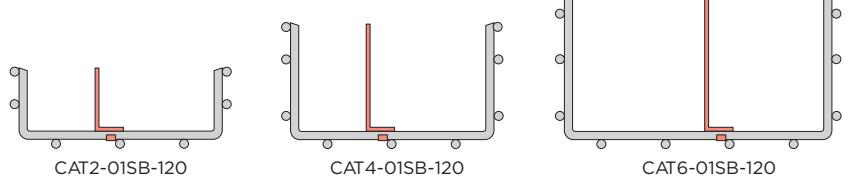

## TRAY DIVIDERS [CAT2-01SB-120], [CAT4-01SB-120], &amp; [CAT6-01SB-120]

- Standard finish is pregalvanized (PG)
- Locks into tray with auto-lock tabs (no hardware required)
- Cut "V" notches into bottom flange to make barriers for flat fittings

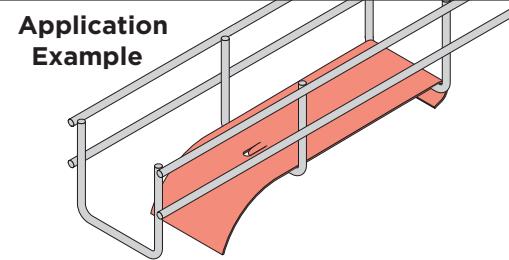

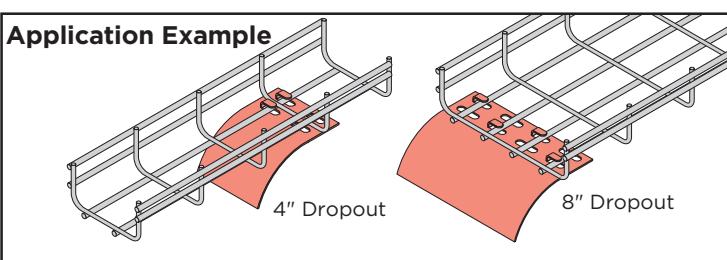

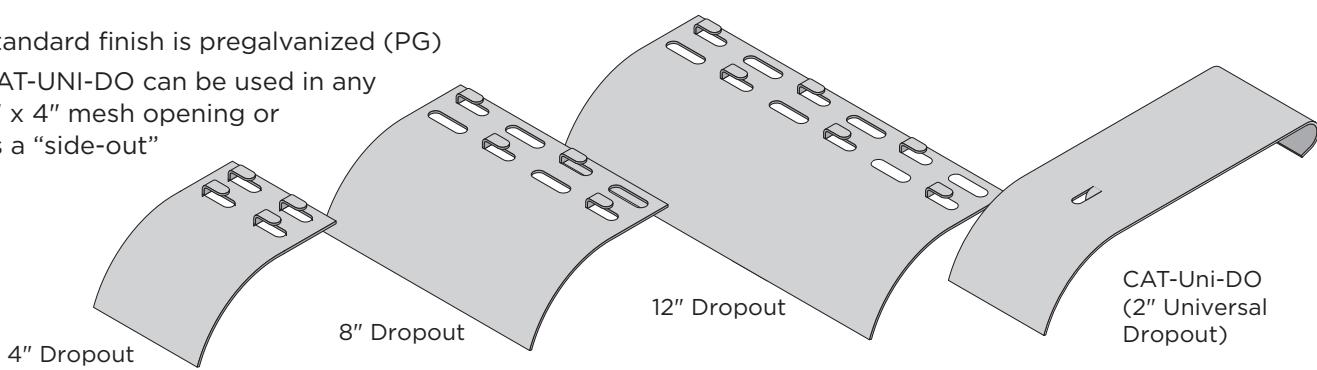

## Application Example

## DROP OUT [CAT-(W)DO]

- Standard finish is pregalvanized (PG)
- CAT-UNI-DO can be used in any 2" x 4" mesh opening or as a "side-out"

# WIRE BASKET SYSTEM

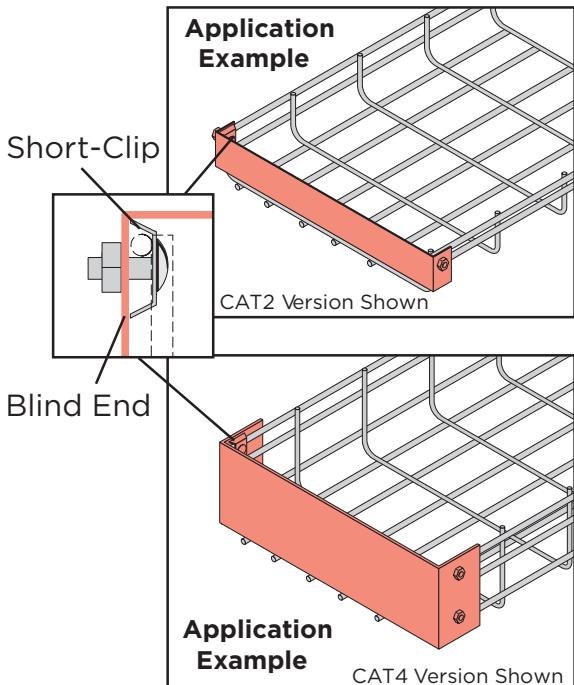

## ACCESSORIES

### BLIND END [CAT(H)-(W)BE]

- Standard finish is pregalvanized (PG)
- Standard use per blind end is:  
(2 pc) CH3 (sold separately)

NOTES:

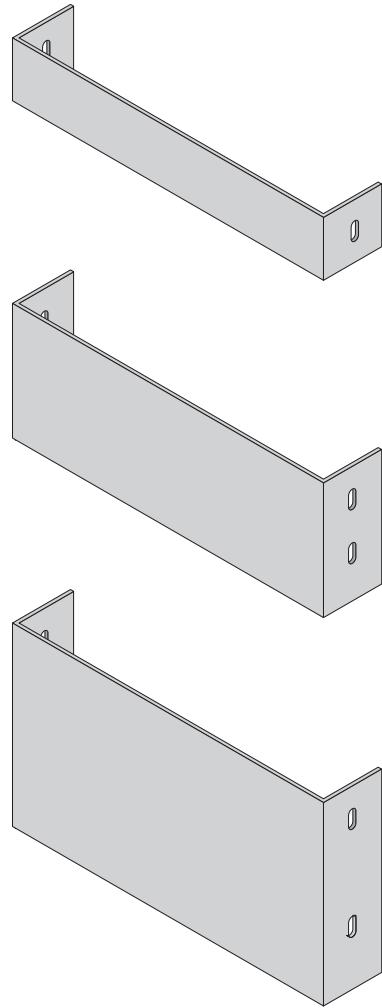

1. Always place nut on outside of tray

Part	WEIGHT (lb)
CAT2-04BE	0.18
CAT2-06BE	0.22
CAT2-08BE	0.28
CAT2-12BE	0.40
CAT2-16BE	0.50
CAT2-18BE	0.57
CAT2-20BE	0.64
CAT2-24BE	0.70

Part	WEIGHT (lb)
CAT4-04BE	0.52
CAT4-08BE	0.64
CAT4-12BE	0.76
CAT4-16BE	0.96
CAT4-18BE	1.08
CAT4-20BE	1.20
CAT4-24BE	1.44

Part	WEIGHT (lb)
CAT6-08BE	0.82
CAT6-12BE	1.12
CAT6-16BE	1.42
CAT6-18BE	1.57
CAT6-20BE	1.72
CAT6-24BE	2.10

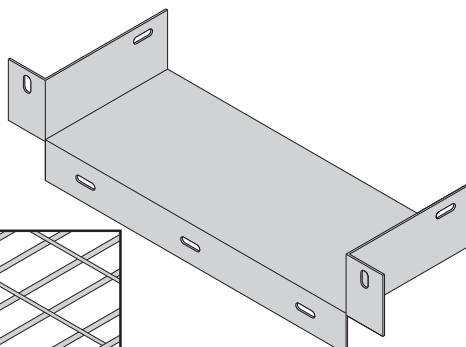

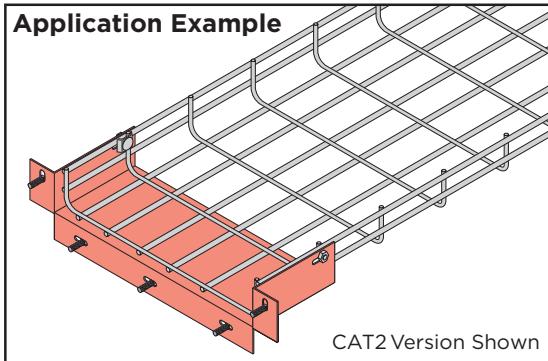

### BOX CONNECTOR [CAT(H)-(W)CB]

- Standard finish is pregalvanized (PG)
- Standard use per box connector is:  
(2 pc) CH3  
(5 pc) EG-CBN  
(both sold separately)

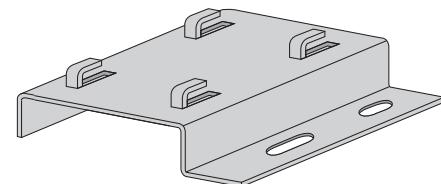

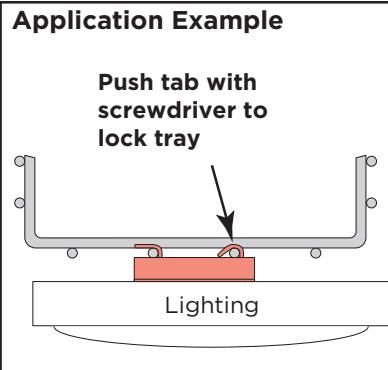

NOTES:

1. Always place nut on outside of tray
2. For use with CAT2, CAT4 & CAT6 tray only

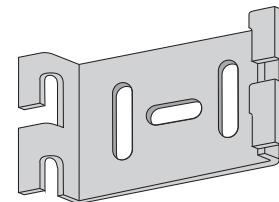

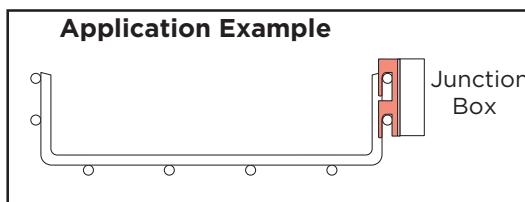

## LIGHTING BRACKET [CAT-HLT]

- Standard finish is pregalvanized (PG)

## ELECTRICAL BOX BRACKET [CAT-EBC]

- Standard finish is pregalvanized (PG)

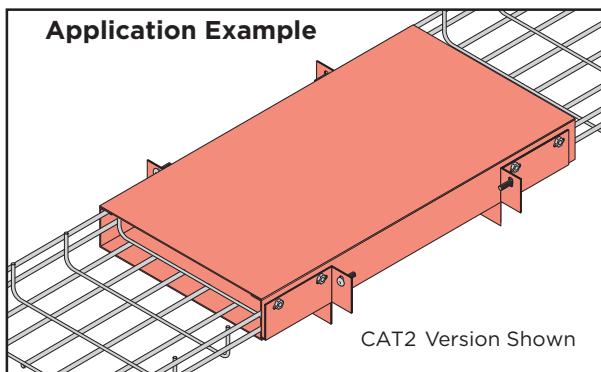

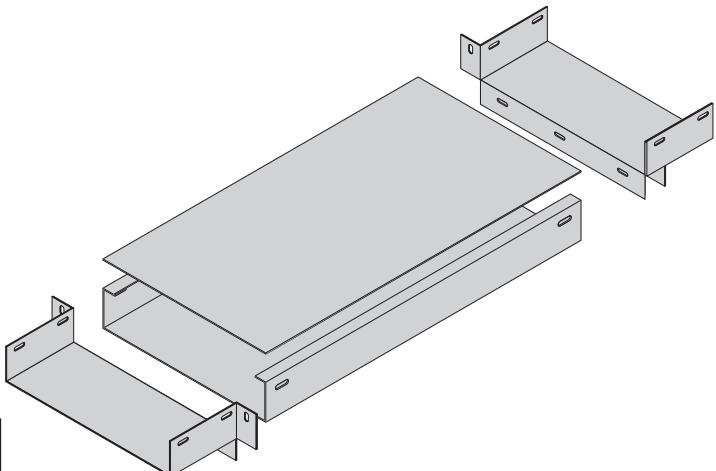

## WALL SLEEVE [CAT(H)-(W)WS]

- Standard finish is pregalvanized (PG)
- Standard use per wall sleeve is:
 

(4 pc) CH3	(5 pc) 6112-0
(4 pc) 5003-1	(4 pc) 5009-1
(8 pc) EM -CC	
(all sold separately)	

## NOTES:

1. Always place nut on outside of tray
2. Example CAT2-12WS

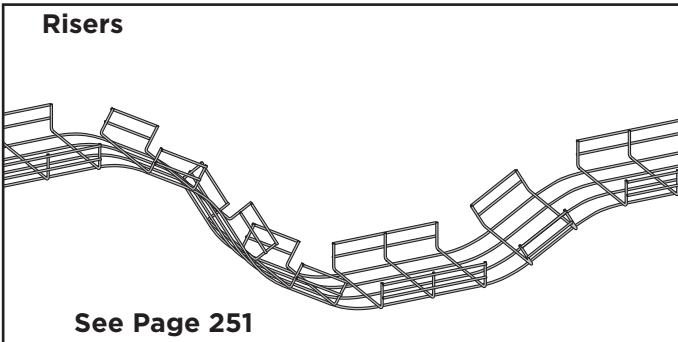

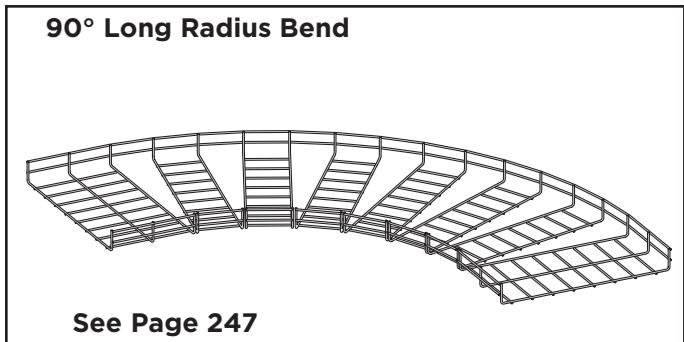

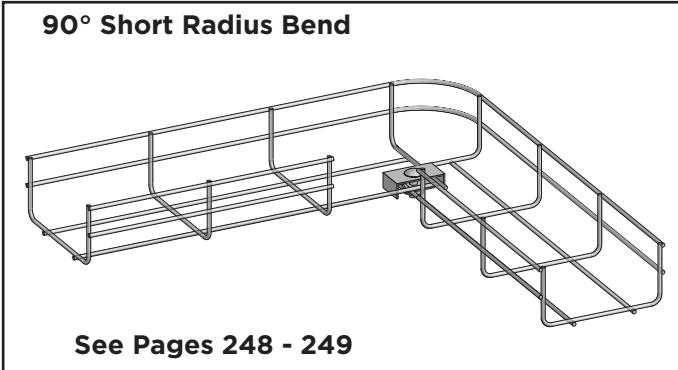

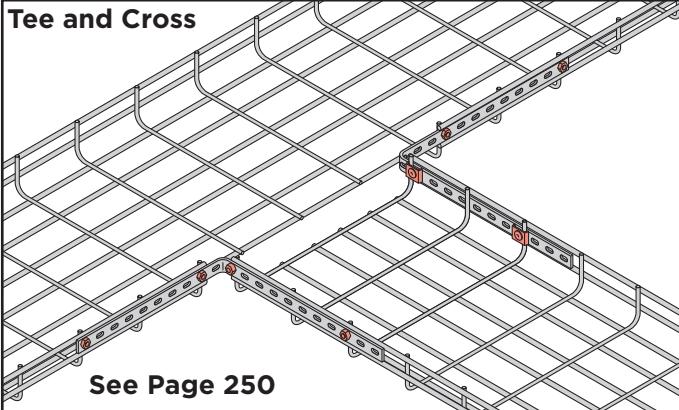

# WIRE BASKET SYSTEM

## FITTINGS OVERVIEW

### FITTINGS OVERVIEW

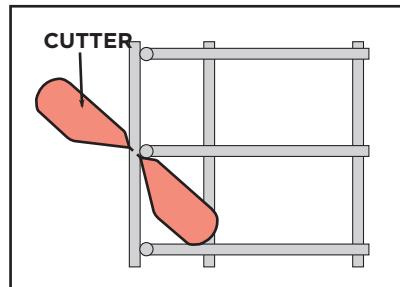

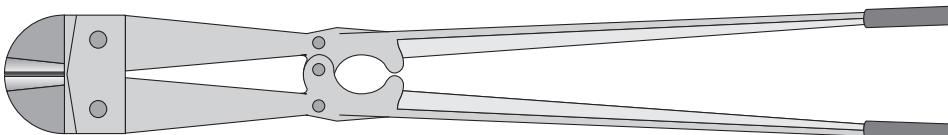

Fittings are typically fabricated on the job. However, prefabricated fittings are available upon request. Please contact factory.

To determine the fitting hardware required to create a set of fittings, please consult our online calculator. [Choose Wire basket tray from the Products menu on the front page of [www.copecabletray.com](http://www.copecabletray.com).]

### CUTTING TOOL [CAT-CUT]

Fittings can be formed easily on-site by cutting the bottom and side wires. Cut the tray bars on an angle as shown in the illustration.

NOTE: When cutting, keep the remaining sharp edge away from the inside of the tray.

## 90° LONG RADIUS BENDS

## 90° BENDS - LONG RADIUS

**1 CUT THE BOTTOM AND SIDE WIRES**

To form 90° bends in the tray, cut out the number of sections shown below based on the width of the tray used

**2 ASSEMBLE USING APPROPRIATE HARDWARE**

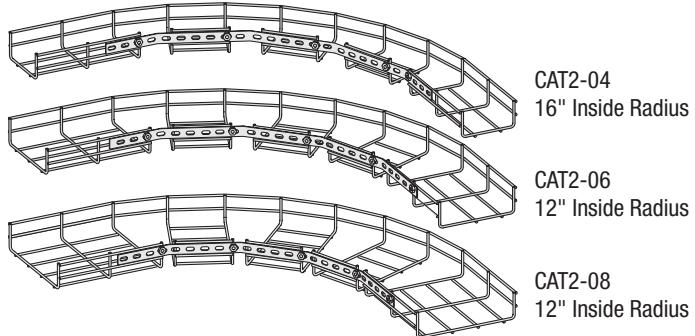

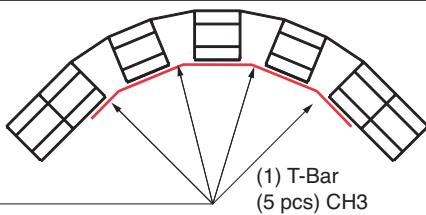

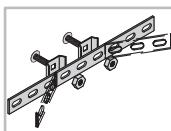

- Standard hardware is shown with each bend size.

**Advantages:**

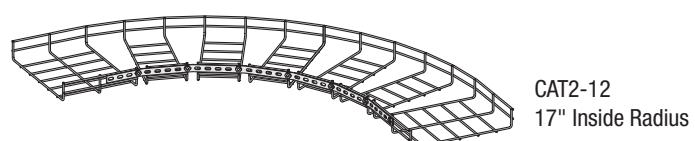

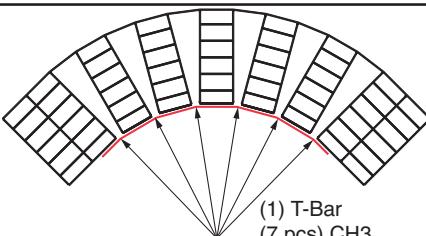

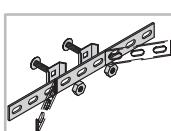

- Use as bonding jumper
- Vertical support of standing sections
- Adjustable radius allowances

NOTE: Always place nut on outside of tray

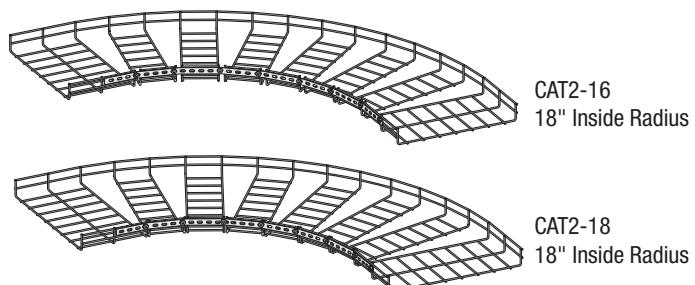

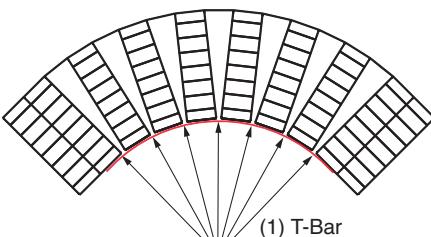

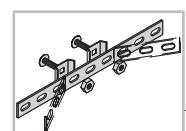

Cut Out 4 Sections  
of Mesh as Shown

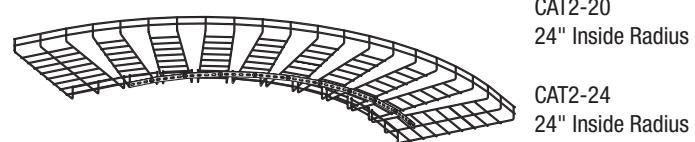

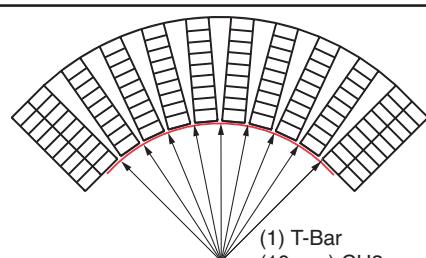

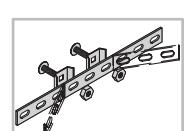

Cut Out 6 Sections  
of Mesh as Shown

Cut Out 7 Sections  
of Mesh as Shown

Cut Out 9 Sections  
of Mesh as Shown

# WIRE BASKET SYSTEM

## 90° SHORT RADIUS BENDS

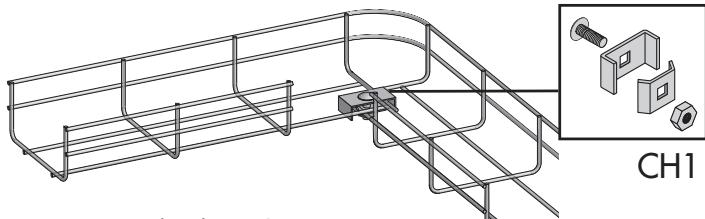

### 90° BENDS - FORMING INSTRUCTIONS

To form 90° bends in the tray, cut the wires shown in the color shaded area of the drawing which corresponds to the width of the tray used.

#### 1 CUT THE BOTTOM AND SIDE WIRES

Bends can be formed easily on-site by cutting the bottom and side wires. The shaded areas indicated should be cut and removed. Then, simply bend Wire basket tray cable tray to form a 90° angle and you are ready to install. Make sure you use the appropriate hardware.

#### 2 ASSEMBLE USING APPROPRIATE HARDWARE

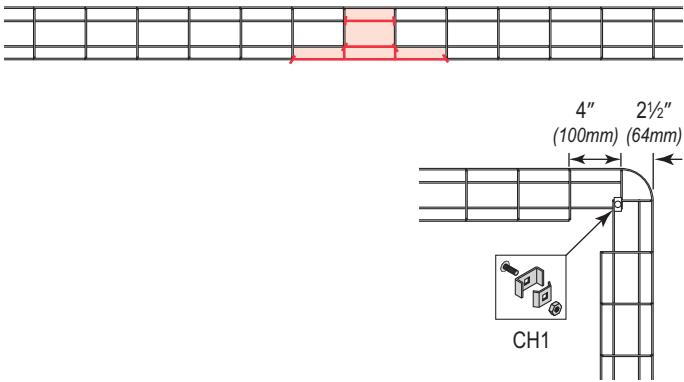

- Standard use is:  
Sizes 4" - 12" (1 pc) CH1  
Sizes 16" - 24" (2 pc) CH1

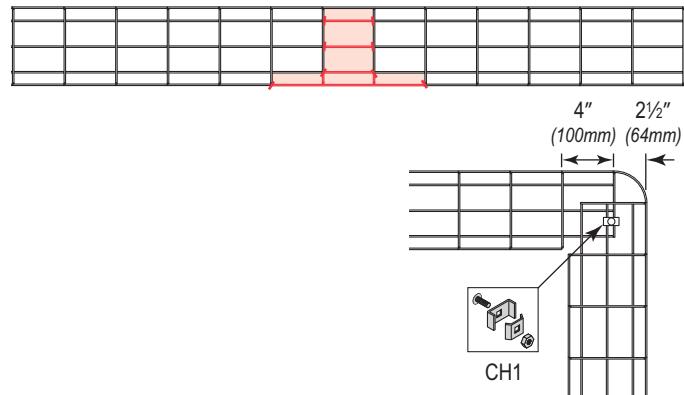

NOTE: Always place nut on outside of tray)

### 90° BENDS - CUTTING DIAGRAMS

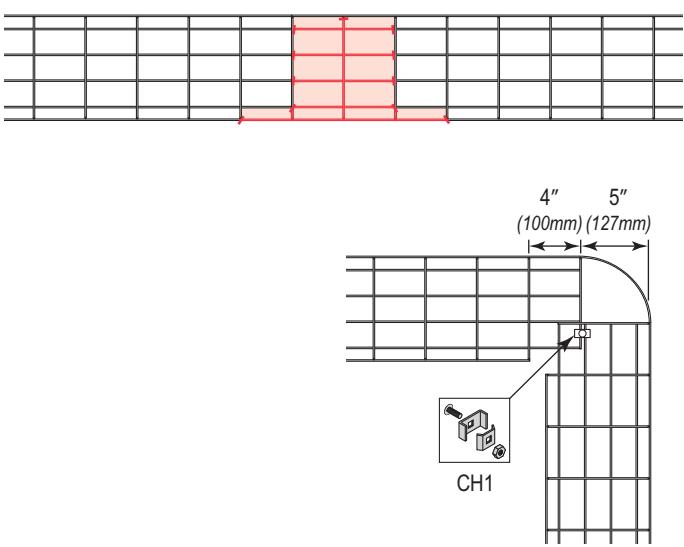

#### 4" (100mm)

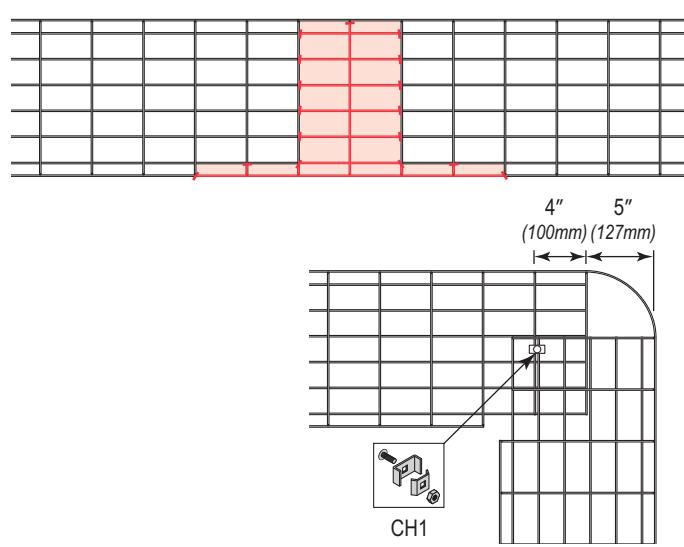

#### 6" (150mm)

#### 8" (200mm)

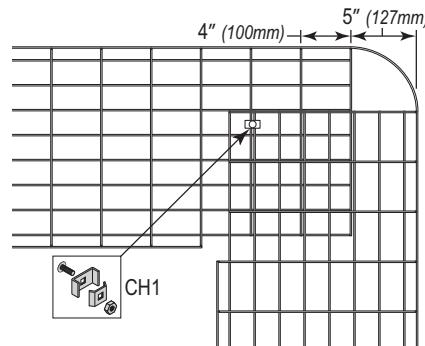

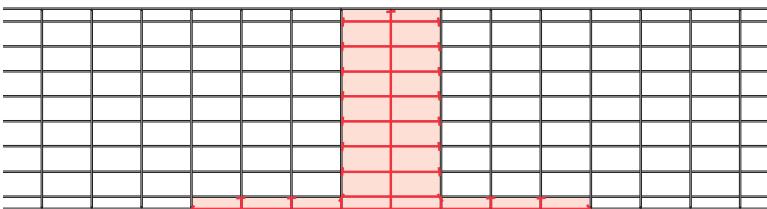

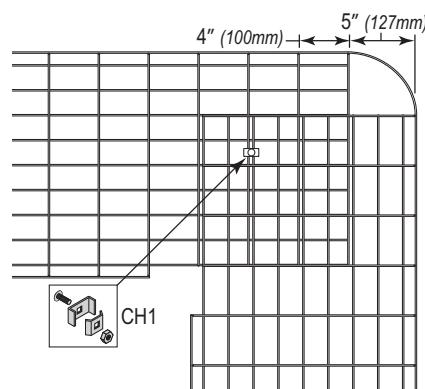

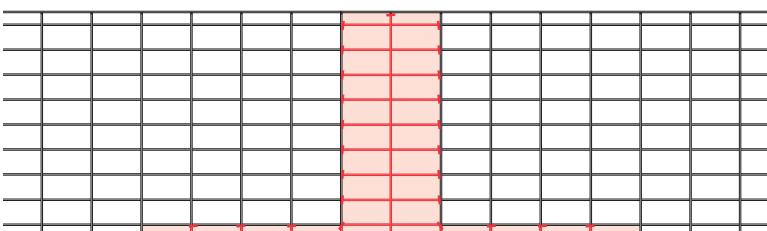

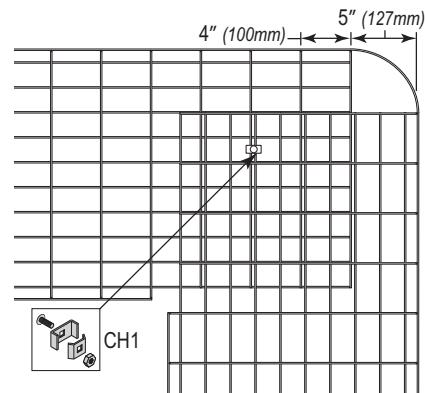

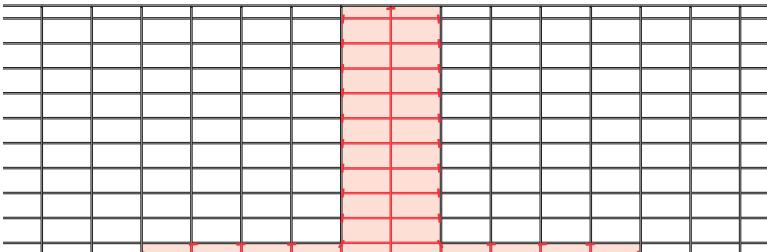

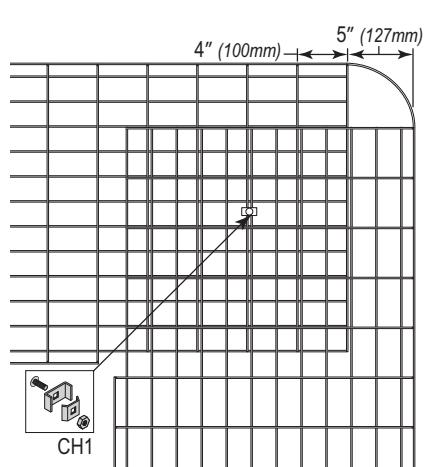

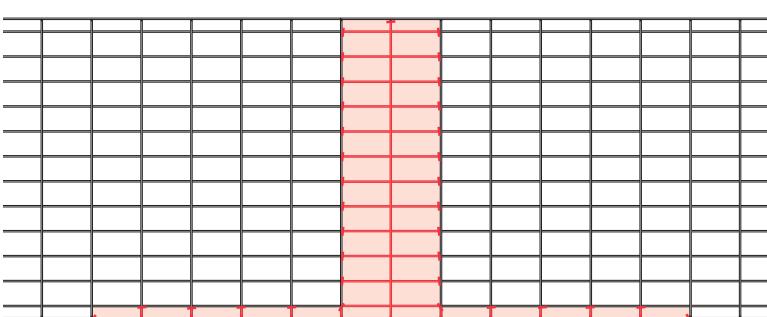

#### 12" (300mm)

# WIRE BASKET SYSTEM

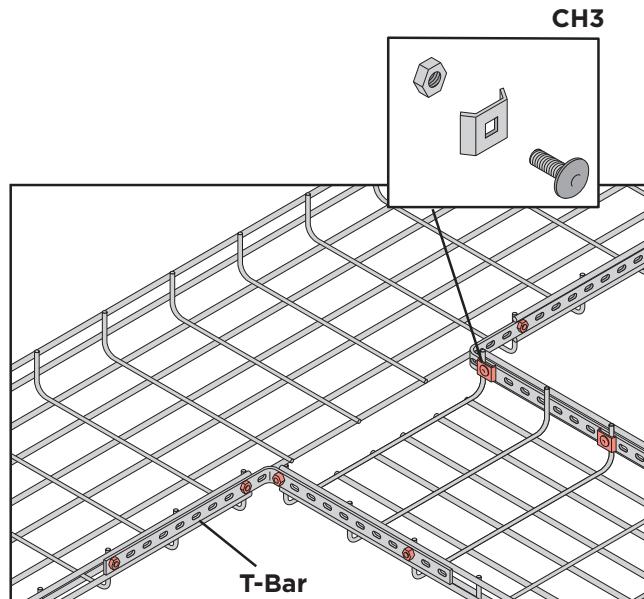

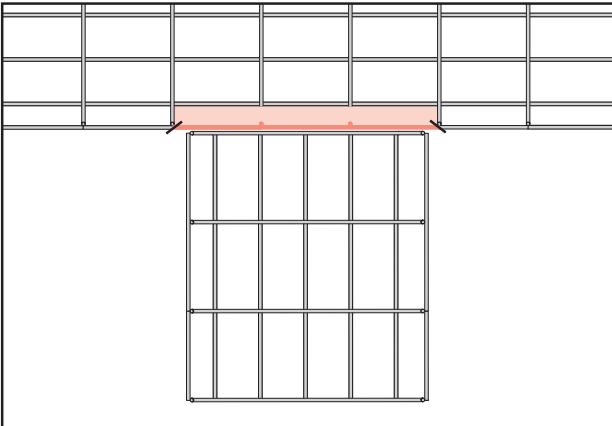

## CROSS & TEE FITTINGS

### STANDARD TEE

- Standard use per tee is:  
(2 pc) T-Bar-22 or (1 pc) T-Bar cut in half  
(8 pc) CH3

NOTE: Always place nut on outside of tray

To form a tee, cut the wires marked in red.

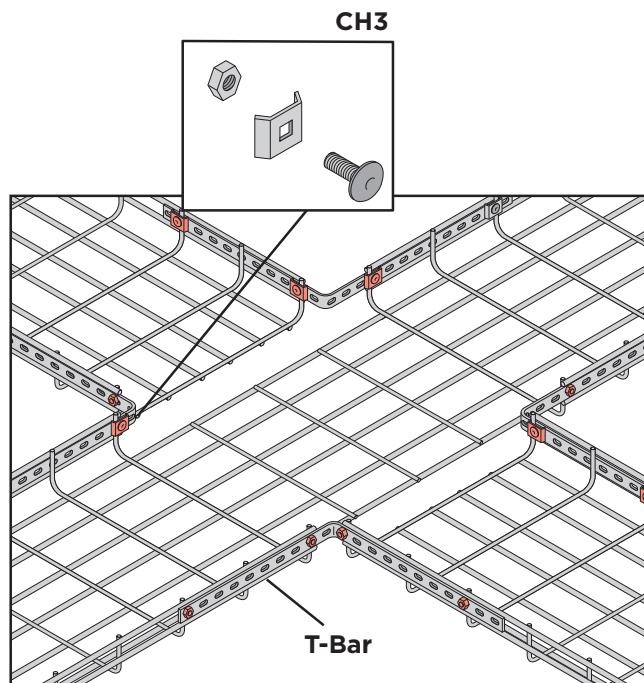

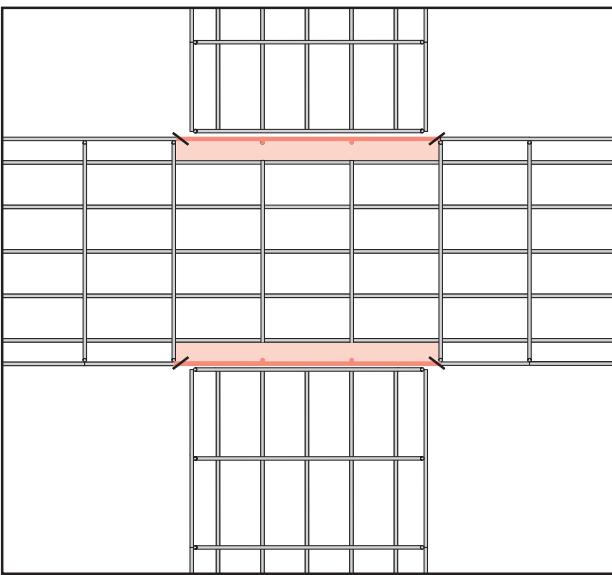

### CROSS

- Standard use per cross is:  
(4 pc) T-Bar-22 or (2 pc) T-Bar cut in half  
(16 pc) CH3

NOTE: Always place nut on outside of tray

To form a cross, cut the wires marked in red.

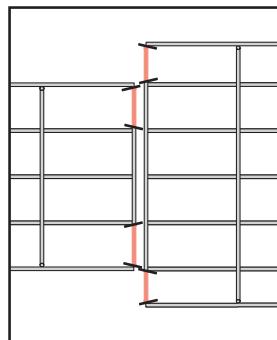

## RISER, REDUCER &amp; OFFSET FITTINGS

## REDUCER

- Standard use per reducer is:  
(2 pc) T-bar  
(8 pc) CH3  
(1 pc) CH2

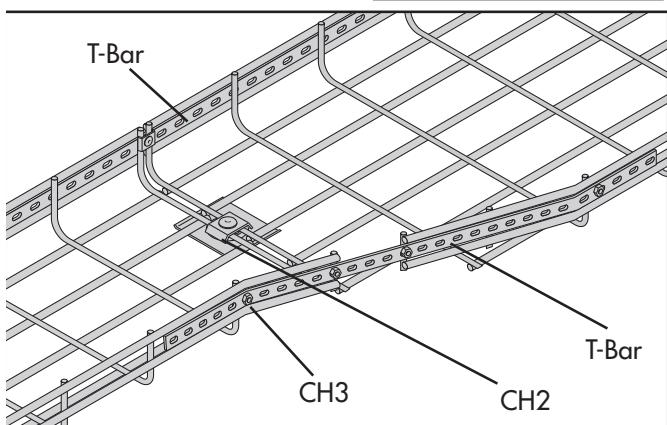

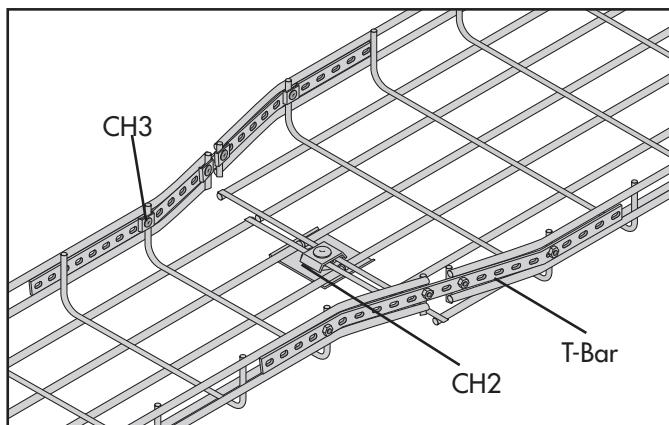

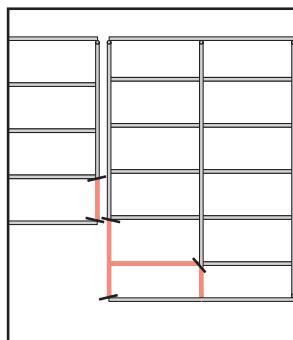

NOTE: Always place nut on outside of tray

## OFFSET

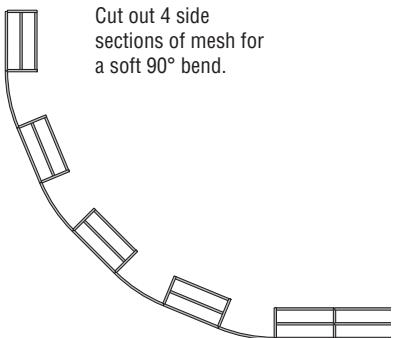

- Standard use per reducer is:  
(2 pc) T-bar  
(8 pc) CH3  
(1 pc) CH2

NOTE: Always place nut on outside of tray

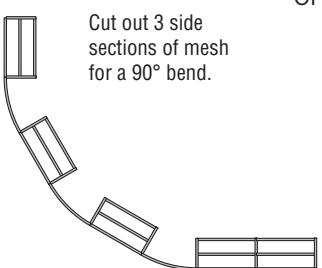

## RISER

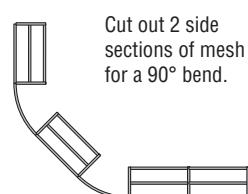

Cut out 4 side sections of mesh for a soft 90° bend.

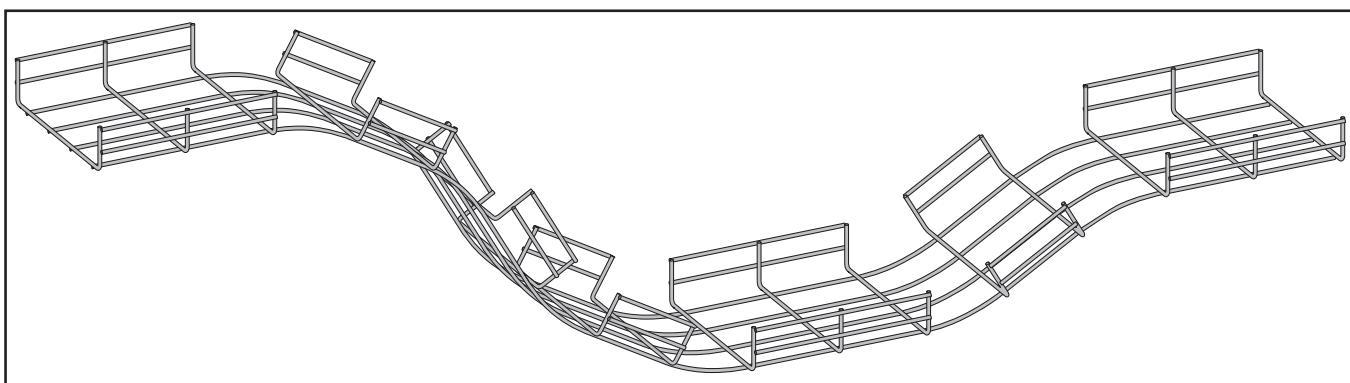

Cut out 3 side sections of mesh for a 90° bend.

Cut out 2 side sections of mesh for a 90° bend.

Cut out 1 side sections of mesh for a hard 90° bend.

# WIRE BASKET SYSTEM

## GROUNDING

### GROUNDING

#### UL CLASSIFIED SYSTEMS

Cope® Wire Basket systems meet the UL Classification.

NOTES: Cope® recommends use of a separate ground wire for equipment grounding.

Any non-conductive coating to wire basket must be removed by the contractor/end-user to maintain electrical continuity.

**STRAIGHT SECTIONS** - The grounding of two straight sections requires the use of

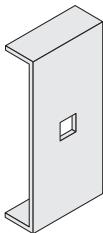

(2) CAT-GC's and (2) EG-CBN's.

These items consist of grounding clips and the appropriate hardware, for connecting to the trays. One clip should be placed on both sides of the tray, attached at the self-splicing bar.

**FITTINGS** - Grounding of fittings requires special attention. Typically, fittings are fabricated in the field by cutting straight sections, thus altering the cross sectional area of the tray. A bonding jumper, and/or a T-Bar Splice, along with the appropriate hardware must be used on either side of the fitting to ensure electrical continuity.

### GROUNDING CLIP [CAT-GC]

- Standard finish is pregalvanized (PG)
- Sold in packs of 10
- Connection to splice bars requires a nut and bolt assembly (EG-CBN) purchased separately
- Use on both sides of tray

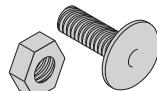

NOTE: Always place nut on outside of tray

CAT-GC's must be utilized if the tray is to be utilized as an equipment ground conductor.

#### Straights

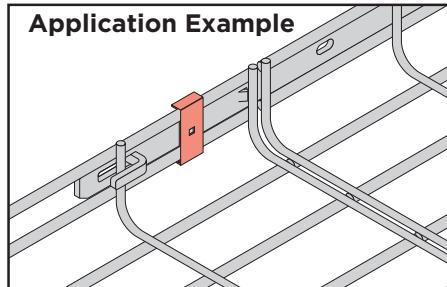

2 pcs of CAT-GC  
2 pcs of EG-CBN

#### EG-CBN

See pg. 233

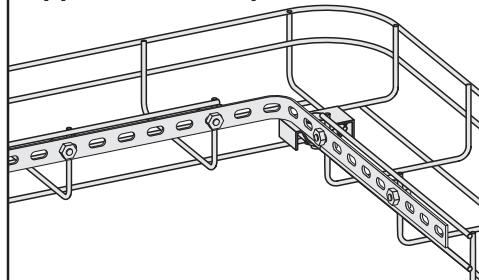

#### Application Example

#### Fittings

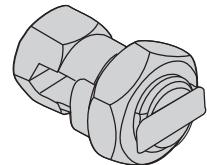

T-Bar and CH3s

#### Application Example

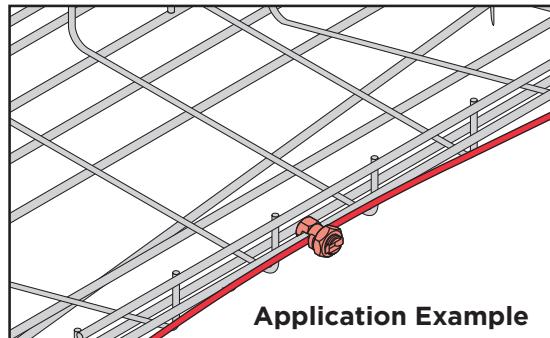

### GROUNDING CLAMP/SPLIT BOLT [SPLIT-BOLT]

- Split bolts are utilized for the attachment of a separate ground wire.
- Use with #6 AWG Ground Conductor

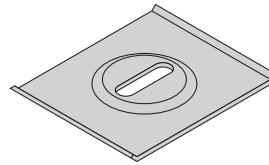

NOTE: Always place nut on outside of tray

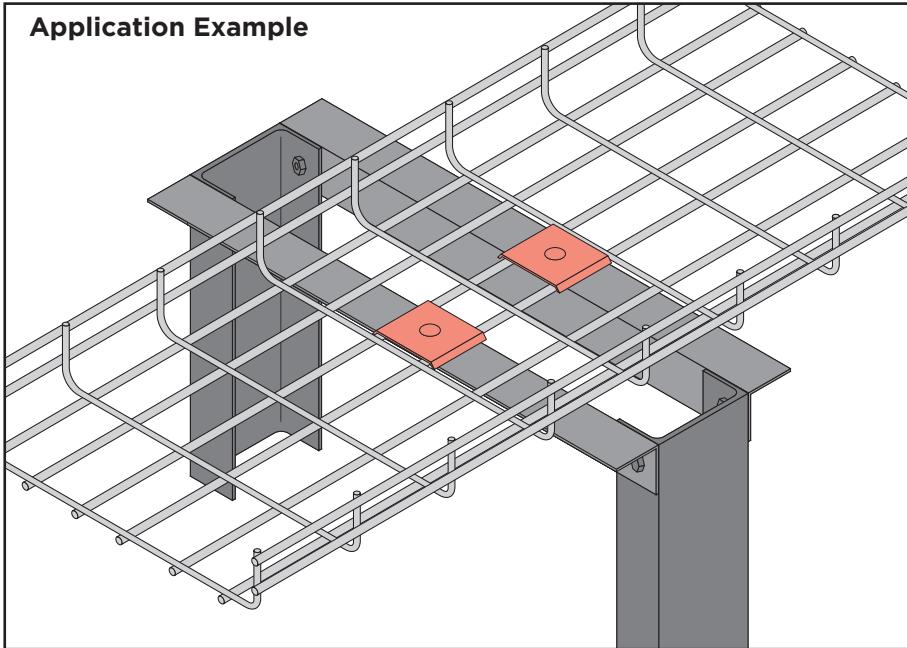

#### Application Example

## BOTTOM CLIP [BOTTOM-CLIP]

- Bottom-clip used a hold-down clip

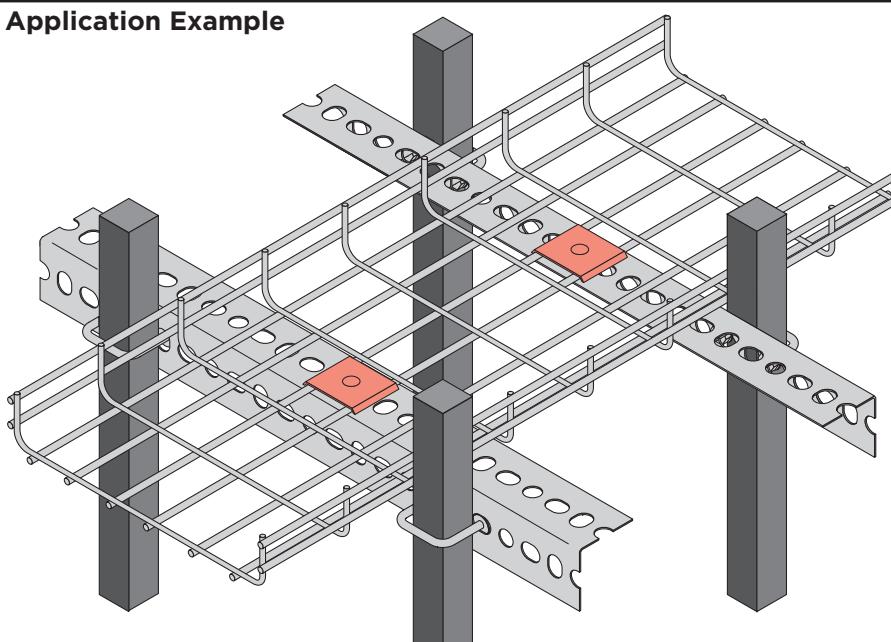

## Application Example

Drill hole in aluminum angle of relay rack.

Use bottom-clip to hold Wire basket tray to relay rack using 1/4"-20 round head machine screw and bolt and washer.

## Application Example

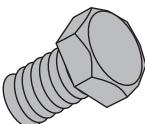

# WIRE BASKET SYSTEM

## HARDWARE

### HEX HEAD CAP SCREWS

- Standard finish is electro-galvanized (EG)

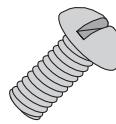

Part No.	Description
PS 6024	1/4"-20 x 1" Long
PS 6024	1/4"-20 x 1-1/2" Long
PS 6024	5/8"-16 x 5/8" Long
PS 6024	5/8"-16 x 1" Long
PS 6024	5/8"-16 x 1-1/2" Long
PS 6024	5/8"-16 x 2" Long

### ROUND HEAD MACHINE SCREWS

- Standard finish is electro-galvanized (EG)

Part No.	Description
PS 6072	1/4"-20 x 1" Long
PS 6072	1/4"-20 x 1-1/2" Long
PS 6072	5/8"-16 x 5/8" Long
PS 6072	5/8"-16 x 1" Long
PS 6072	5/8"-16 x 1-1/2" Long
PS 6072	5/8"-16 x 2" Long

### HEX NUTS

- Standard finish is electro-galvanized (EG)

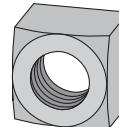

Part No.	Description
PS 83	1/4"-20
PS 83	5/8"-16
PS 83	1/2"-13

### SQUARE NUTS

- Standard finish is electro-galvanized (EG)

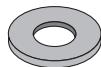

Part No.	Description
PS 6108	1/4" - 20
PS 6108	5/8" - 16
PS 6108	1/2" - 13

### FLAT WASHERS

- Standard finish is electro-galvanized (EG)

Part No.	Description
PS 209	1/4"
PS 209	5/8"
PS 209	1/2"

### LOCK WASHERS

- Standard finish is electro-galvanized (EG)

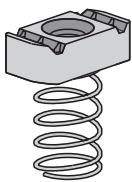

Part No.	Description
PS 211	1/4"
PS 211	5/8"
PS 211	1/2"

**STRUT NUTS**

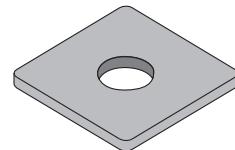

- Standard finish is electro-galvanized (EG)

Part No.	Description
PSRS-1/4	1/4" - 20
PSRS-3/8	3/8" - 16
PSRS-1/2	1/2" - 13

**SQUARE STRUT WASHERS**

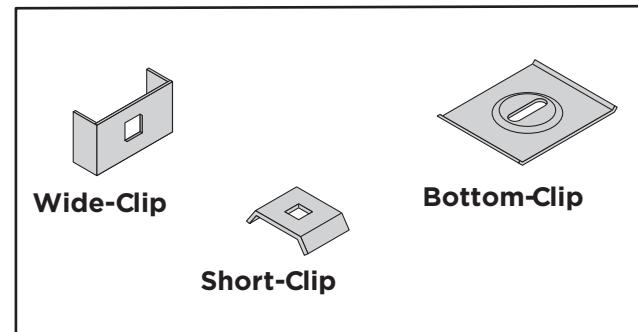

- Standard finish is electro-galvanized (EG)

Part No.	Description
PS 619	1/4" hole
PS 619	3/8" hole
PS 619	1/2" hole

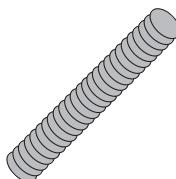

**TRAY CLIPS (SEE PAGE 233 FOR CONNECTOR KITS)**

- Standard finish is electro-galvanized (EG)

Single Part	Weight	No./ Pkg.
Short-Clip	0.2	10
Wide-Clip	0.31	10
Bottom-Clip	0.92	10

**THREADED ROD**

- Standard finish is electro-galvanized (EG)

Part No.	Description	Weight		
		6' Lengths	10' Lengths	12' Lengths
PS 146	1/4" - 20	73	121	146
PS 146	3/8" - 16	175	292	350
PS 146	1/2" - 13	319	531	638

# WIRE BASKET SYSTEM

## SAMPLE SPECIFICATION

### 1.0 ACCEPTABLE MANUFACTURER

Provide Cope® Wire Basket type of cable management system as manufactured by Atkore International or engineered approved equal. All cable trays shall be installed in a neat uniform fashion. Installing contractor shall field modify tray system to accommodate the exact routing requirements.

### 2.0 MATERIAL/FINISHES

Wire basket tray to be fabricated from high strength steel wires.

#### 2.1 Acceptable finishes;

##### 2.1.a Standard Finish

**EG** – Electro-Galvanized Steel in accordance with ASTM 633 Type I SC3.

##### 2.1.b Special Finishes

**HD** – Hot dipped Galvanized Steel in accordance with ASTM 123.

**ZD** – Electro- Galvanized Steel with a Yellow Dichromate applied over the Standard EG finish per ASTM633 type II, SC3.

**EP** – Epoxy Coated Steel.

**SS** – AISI 304L stainless or AISI 316L stainless steel.

### 3.0 - STRAIGHT SECTIONS

Straight sections shall be manufactured from high strength steel wires forming 2" X 4" openings and shall conform to the following dimensions

#### 3.1 Length

Straight sections shall be supplied in 10' lengths

#### 3.2 Width

Widths shall be 2", 4", 6", 8", 12", 16", 18", 20", or 24" as called out on drawings.

#### 3.3 - Load depths

The load depths shall include 2", 4", & 6" as required.

### 4.0 SPLICES

All straight sections shall be supplied with pre-installed, auto-locking, splices plates, where possible, as per Cope® brand. Trays design shall allow for a snap together type connection and shall require no nut and bolt assembly.

### 5.0 FITTINGS

All fittings shall be fabricated in the field as required, per manufacturer's recommendations. Radius of the fittings shall be based on the "minimum bending" radius of the cables being installed.

### 6.0 ACCESSORIES

Accessories such as blind ends, dropouts, and barriers, etc... shall be installed as specified on drawings.

### 7.0 SUPPORTS

Supports shall include, but are not limited to, center type, trapeze type, wall supports and floor supports.

#### 7.1 Auto Locking

All supports shall be supplied with an Auto locking feature, requiring no special tools for attachment of the trays.

#### 7.2 Finish

All supports, including threaded rod and associated hardware shall be electro-galvanized coated to ASTM B633 SC1 or ASTM B633 SC3.

# REFERENCE DATA

## CORROSION RESISTANCE GUIDE

The symbols to the right have been used throughout the table in order to provide an indication about the suitability of a potential candidate material for a specific chemical environment.

**NOTE:** These tables should be regarded only as GUIDES to anticipated performance because of possible contributions from temperature, pollutant (contaminant) species, etc.

### SYMBOLS:

++	First choice; very low corrosion rate, typically <5 mpy, or <0.005 Inch/year, (1 mil = 1/1000 inch).
+	Good choice; low corrosion rate, typically <20 mpy, or <0.02 Ipy.
-	Can use; corrosion rate up to 50 mpy (0.05 Ipy); some limitations may apply.
X	Not recommended.
(-)	Brackets indicate probable limitations, E.G., At higher temperatures, [symbol "T"]; at higher concentrations, [symbol "C"]; due to pitting, [symbol "P"]; due to local grain boundary attack in the metal - intergranular corrosion, [symbol "I"]; due to stress corrosion cracking, [symbol "S"].
nd	No available data

COPE-GLAS™

WIRE BASKET

Reference

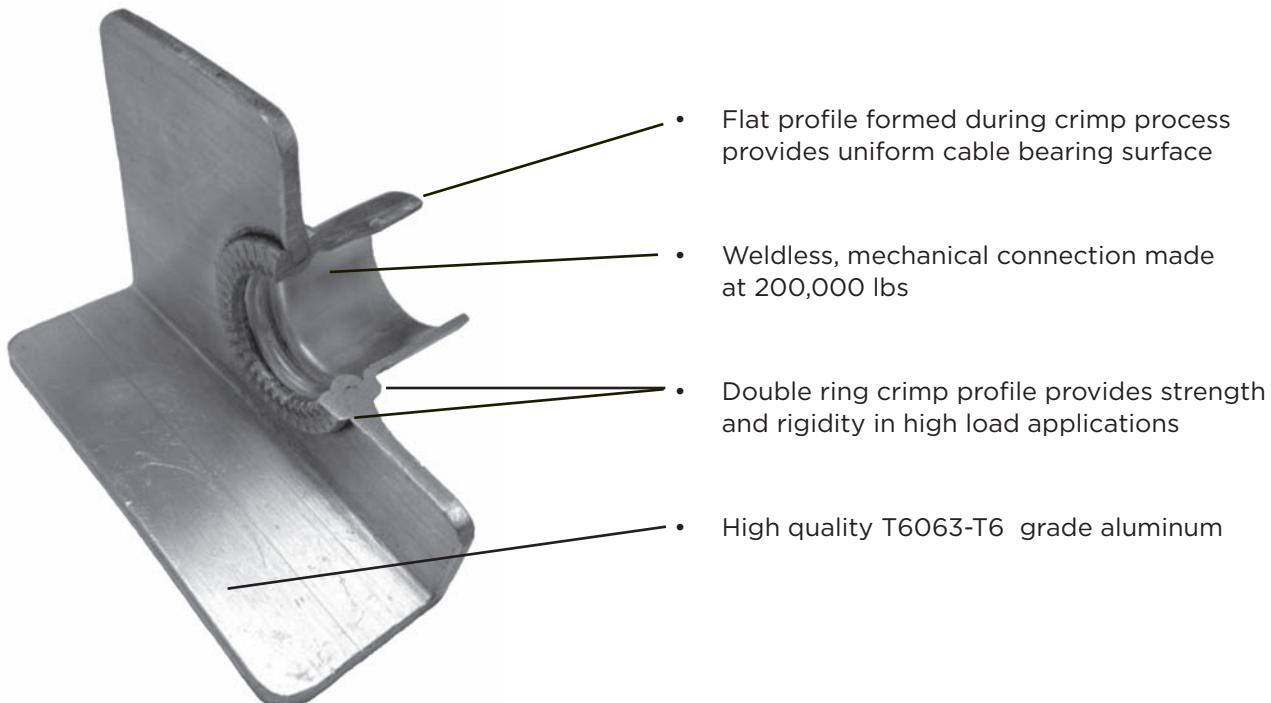

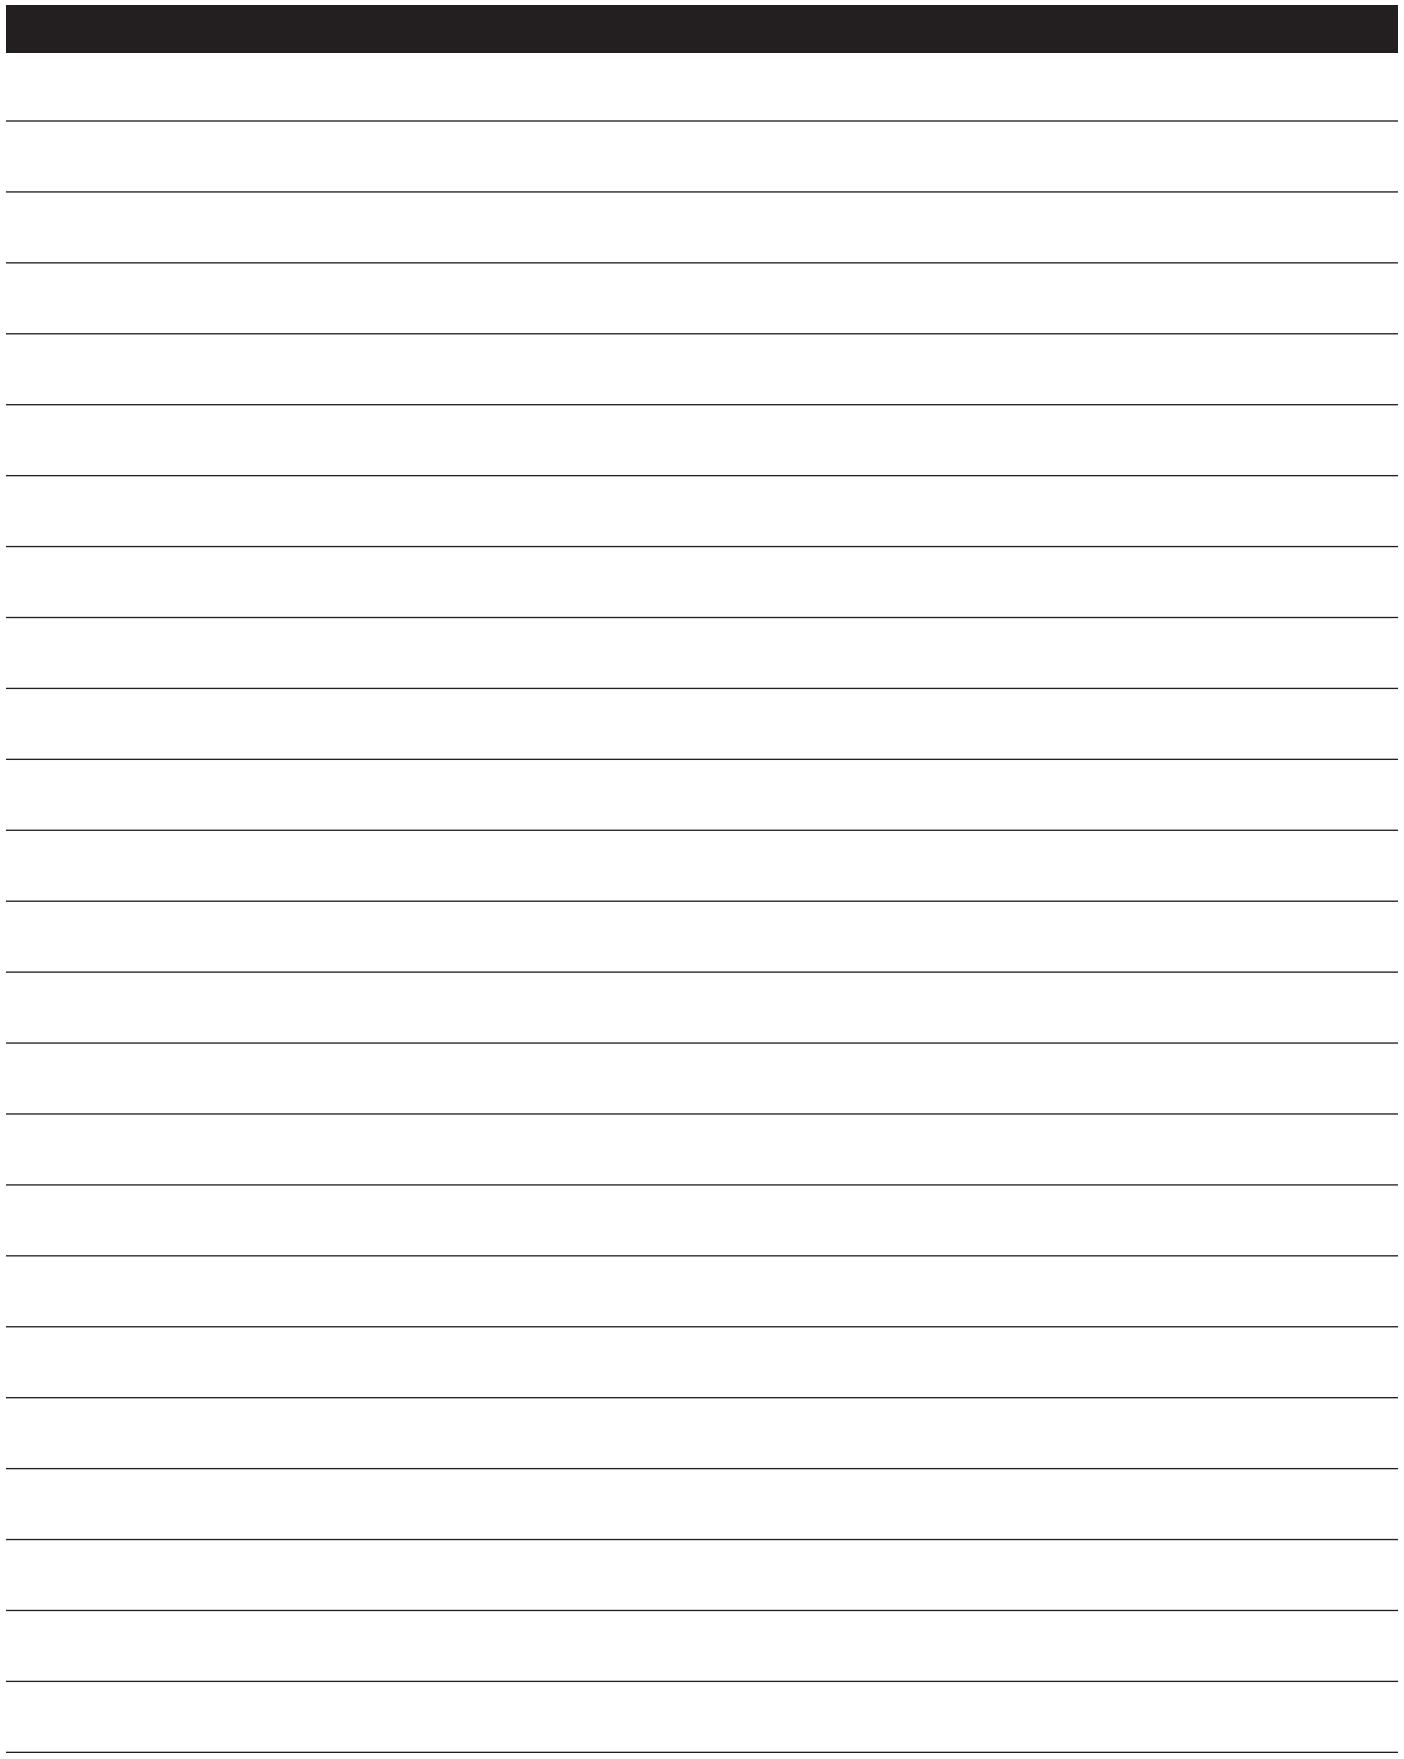

Cope® uses a unique manufacturing process called “cold swaging” to attach rung to rail. Compared to welded products, Cope cold swaged cable tray offers double the pull out strength, provide stiffer overall rigidity, free access to cables and look better installed. This unique manufacturing process is extremely efficient which quickens production and improves product availability.

## APPLICATION SPOTLIGHT: WIND TURBINES

Renewable Energy is a growing and important segment to the energy industry. The wind power industry is developing into an important player in that mix. Cope cold swaged cable tray has proven to be a vital component in the construction of the thousands of wind towers that have been built in recent years.

Wind turbines vibrate intensely during operation. This can cause welded tray to become brittle and snap after a relatively short period of time. Cope cold swaged tray has proven durable even in this extreme dynamic state environment. This reliable performance under extreme conditions is the basis for prominent manufacturers incorporating Cope products into their wind tower designs.

## NOTES

## NOTES

Some names carry a lot of weight.

## Cope Ladder Tray with 360° Cold Swage

When it comes to cable management solutions, Cope is the strong choice. And cable trays don't come any stronger than the Cope Ladder Tray. The cold swage connections create the toughest, most rigid cable trays in the industry, so it can handle whatever weight you throw its way. [CopeCableTray.com](http://CopeCableTray.com)
